

October 27, 1989

MEMORANDUM FOR: Christopher I. Grimes, Director
 Comanche Peak Project Division
 Office of Nuclear Reactor Regulation

FROM: E. William Brach, Chief
 Vendor Inspection Branch
 Division of Reactor Inspection and Safeguards
 Office of Nuclear Reactor Regulation

SUBJECT: IDENTIFICATION OF COMANCHE PEAK ISSUES

In response to your memorandum of October 11, 1989, same subject as above, there are three issues which the Vendor Inspection Branch is aware of that may impact Comanche Peak licensing activities. The three issues are listed below:

1. Borg Warner check valve internal parts,
2. Bulletin 88-10, molded case circuit breakers, and
3. Equipment qualification

For item number 1 above, there have been frequent meetings between OSP and VIB staff and I believe we are all aware of the status and actions relevant to the Borg Warner check valve issue. A supplement was issued to Bulletin 88-10 in August 1989 which provides ample guidance to allow OSP closure of item number 2 above. For the last item, VIB provided technical support to OSP on an EQ inspection at Comanche Peak in August 1989. Resolution of outstanding EQ issues is being handled by OSP.

If you have any questions on the above issues, please contact me, Ed Baker, or Uldis Potapovs on 492-0961.
