Gentlemen:

This refers to the inspection conducted by Messrs. A. Singh, C. E. Johnson, and M. E. Murphy of this office, and Mr. T. Storey of Science Applications International Corporation (SAIC) during the period October 2-6, 1989, of activities authorized by NRC Construction Permits CPPR-126 and CPPR-127 for the Comanche Peak Steam Electric Station (CPSES), Units 1 and 2, and to the discussion of our findings with you and other members of your staff at the conclusion of the inspection.

Areas examined during the inspection included establishment and implementation of the fire protection program. Within these areas, the inspection consisted of selective examination of procedures and representative records, interviews with personnel, and observations by the inspectors. The inspection findings are documented in the enclosed inspection report.

During this inspection, the inspectors noted that fire protection program implementation was not complete in the areas of Thermo-lag, radiant energy shields, fire doors, emergency lights, and penetration seals. It is understood that you have committed to complete the implementation of these areas prior to fuel load.

Within the scope of the inspection, no violations or deviations were identified.

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

ORIGINAL SIGNED BY R. F. WARRICK
