ENVIRONMENTAL TECHNICAL SPECIFICATIONS, OCONEE (F20050H2)

This is in response to N. C. Moseley's February 24, 1975, memorandum regarding monitoring and reporting of fish, fish eggs and larvae impinged on intake screens at Oconee. We contacted Mark Au who is the environmental project manager, RL, for Oconee. He told us that on March 6, he and representatives of TR visited the site to obtain a better understanding of the problem. TR is actively considering alternatives and is supposed to recommend tech spec changes to Environmental Projects by the end of April. Au feels that the schedule is realistic and anticipates finalizing a tech spec change by the end of May. We plan to keep after RL if that schedule is not maintained.
