The Environmental Evaluation Branch has reviewed the May 6, 1977 letter from Duke Power Company (DPC) which contains information on the proposed amendment to Section 4.1 of the Operational Safety Review Technical Specifications for Oconee Nuclear Station. We have completed our review and evaluation of the proposed changes to Table 4.1-3 so that the licensee will analyze for only principal gamma emitters in liquid and gaseous effluents from the station and find them acceptable.

Enclosure 1 is suitable for inclusion in the safety evaluation for this amendment. Enclosure 2 is the revised Oconee Nuclear Station Technical Specifications.
