Note to File

TELECON 12/7/72 - Parker, Duke; Hooker, BAW; Maccary, Lange, hou, MEB;
Peltier, PWR-4

The purpose of the telecon was to discuss Projects and TR visit to Oconee site to witness HFT and vibration testing of internals.

It was agreed that one person from Projects and one from MEB would visit the site the week of 12/18/72 while the HFT are in progress to witness data acquisition and discuss results to date. A second visit of Projects and MEB personnel will be arranged when the internals are disassembled for inspection.

B&W stated that tests to date (cold flow) have indicated low stresses and frequencies in the range of prediction for the internals. Hot tests were just beginning at the time of the telecon.
