R. C. DeYoung, Assistant Director for Pressurized Water Reactors, DRL
THRU: A. Schwencer, Chief, Pressurized Water Reactors Branch, No. 4, DRL

TELECON WITH RDT REGARDING OCONEE 1 STEAM DAMAGE

On March 23, 1972, I was called by Milt Shaw, RDT. He had been discussing the Oconee problem with Commissioner Ramey and called for the latest information. I gave him the same information I gave Whitman in an earlier telephone conversation. He also asked if Westinghouse and Combustion had the same arrangement for instrument tubes. I told him that Westinghouse arrangement was similar in that instruments came through the bottom head but design features may be different and that Combustion arrangement was through top head.

He requested to be kept informed on developments.
