Docket No. 50-269

SEP 14 1972

NOTE FOR FILES

TELECON WITH KEN CANADY, DUKE POWER COMPANY - SEPTEMBER 13, 1972  
GENERAL MATTERS - OCONEE

1. Duke has employed a consultant to work on the Oconee Industrial Security Plan. It is anticipated that the consultant's work will be completed by October 1, 1972 and that Duke will submit its plan to the AEC by October 15, 1972.
2. K. Canady was told per my discussions with Fred Clark, Environmental Projects, that we would be ready to discuss the environmental tech specs (Appendix B to the license) with Duke, the first week in October. These specs will be on a station basis covering all three Oconee Units.
3. Duke has written a letter to Directorate of Licensing requesting reconsideration of our position on minimum crew size for multi-unit operation at Oconee.
4. Canady was advised that per my discussion with C. Ferrell, Site Analysis, that the site boundary thyroid dose resulting from hydrogen purging is above the acceptable guideline value by our independent analysis but that the matter is still under review.
5. Canady was advised that per my discussion with C. Ferrell, Site Analysis, that the doses resulting from the fuel handling accident using new guideline assumptions for retention of iodine in water are acceptably low. Our assumptions and the applicant's assumptions differ but in both cases the results are acceptable.

Original Signed by  
Irving A. Peltier
