MAY 9 1972

Note to File

TELECON WITH K. CANADY, DUKE POWER COMPANY AND R. STRAUB, D. STEINKE,
B&W ON MAY 8, 1972

This call was with reference to three questions requiring clarification
in our recent Oconee 2 & 3 review question list.

Question 2.5 deals with transportation accidents involving hazardous
material. I referred him to Bill Gammill for clarification.

Question 4.4 deals with the ASME Code Section III fracture toughness
rules which will be revised this summer. Our letter implies that
revision had taken place. I informed them that we were referring to
the revision to be published in July 1972 and that Art Lower and R.
Edwards of B&W are familiar with the revision per my discussion with
Bolosky.

Question 6.2 deals with detection of failure of engineered safety
features during operation. I informed them that we meant "normal
operation" of the plant.
