Richard C. DeYoung, Assistant Director for PWR's, L

ADEQUACY OF INFORMATION IN DAVIS-BESSE NUCLEAR POWER STATION PSAR - SEISMIC CLASSIFICATION, SYSTEM QUALITY GROUP CLASSIFICATIONS AND COMPLIANCE WITH CODES AND STANDARDS RULE, 50.55a OF 10 CFR PART 50

Plant Name: Davis-Besse Nuclear Power Station  
Licensing Stage: OL  
Docket No. 50-346  
Requesting Branch and Project Leader: PWR-4, I. Peltier  
Requested Completion Date: January 5, 1973  
Technical Review Branch Involved: Reactor Systems Branch  
Description of Request: Pre-acceptance review  
Review Status: Complete

In sections 3, 5, 6, 9, 10 and 11 of the PSAR the applicant has identified the codes and standards and seismic classification for those components which comprise the reactor coolant pressure boundary and other fluid systems important to safety. The applicant has noted in a satisfactory manner on the Piping and Instrumentation Diagrams, the boundary limits of his classification scheme.

Overall, it appears that the information is approximately 85% complete. For those few areas where there are omissions or may require clarification, it appears that they can be resolved along with those differences which will be identified at the detailed review stage.

Eight man-hours were expended on this review.

Donald F. Knuth
