Docket No. 50-346

MEMORANDUM FOR: C. Miller, Section Leader, Electrical Instrumentation
and Control Systems Branch, Division of Systems Safety

FROM: L. Engle, Project Manager, Light Water Reactors Branch
No. 1, Division of Project Management

SUBJECT: RESOLUTION OF OPEN ITEMS REMAINING IN THE DAVIS-BESSE,
UNIT 1 DRAFT SER

At our forthcoming site visit to the Davis-Besse Nuclear Power Station, Unit 1 on October 6, 7, and 8, our plans call for first addressing the open items as presently stated in Section 7, Instrumentation and Controls, of the draft Davis-Besse 1 SER. The applicant has been contacted and is ready to discuss these open items with the staff on Wednesday, October 6, 1976.

After the site visit to Davis-Besse 1 is concluded, it is imperative that a new SER update be provided by October 15, 1976, which includes any resolution of open items obtained at the site visit. The new SER update should also include recent revisions to the PSAR (Amendments 28 through 37), which may interface with open items for instrumentation and controls.

The October 15, 1976 date for the revised SER input (Section 7) is required to reduce the number of open items and allow the revised SER input to be incorporated in the Davis-Besse, Unit 1 SER scheduled for issuance on November 5, 1976.
