Docket No. 50-346

J. F. Stolz, Chief, Light Water Reactors Branch No. 1, DPM

PROPOSED REVISION TO DAVIS-BESSE UNIT NO. 1 FSAR TEST ABSTRACT; "LOSS OF STATION AIR TEST"

In response to your June 25, 1976 Technical Assistance Request (LNR-1 13-76) to Mr. D. J. Skovholt we have reviewed the abstract for the subject test and find it acceptable. Based on telephone discussions with Mr. Constable of Mr. Sniezek's branch and with Mr. R. Martin, Region III, we understand that the concern which prompted I&E's request for NRR review of the test abstract has been eliminated because Toledo Edison has rewritten the detailed test procedure. Therefore, we consider this matter closed.

C. J. Heltemes, Jr., Chief
 Quality Assurance Branch
 Division of Project Management
