MEMORANDUM FOR: R. C. Knop, Chief, Reactor Section
No. 1, R:III

THRU: James H. Sniezek, Chief, Light Water Reactor
Programs Branch, Division of RIP, IE

FROM: Frank Nolan, Senior Reactor Inspection
Specialist, LWR Programs Branch, RIP, IE

SUBJECT: TOLEDO EDISON COMPANY - REFERENCE DATA FOR SECTION XI
OF THE ASME CODE, DOCKET NO. 50-346 (F3 0239 H1)

Enclosed for your information is the subject licensee's most recent submittal to NRR regarding the subject code requirements. Discussions with NRR personnel revealed that the proposed surveillance program is inadequate and that additional information will have to be submitted by the licensee to meet the guidance described in Enclosure 2. The forthcoming information should resolve the questions raised in your memorandum. It should be noted that the licensee may be granted an exemption from certain of the requirements. However, these will have to be requested by the licensee and be approved by NRR.

We recognize that this does not resolve your immediate problem. As a result, we have requested L. B. Engle, NRR, to forward copies of all updated information to you on an expedited basis. We suggest in this case you deal directly with Mr. Engle.

If the specified additional information is not forthcoming or if you wish to discuss this matter further, please contact me.
