Docket No. 50-346

MEMORANDUM FOR: L. G. Hulman, Chief, Hydrology-Meteorology Branch,  
 Division of Site Safety and Environmental Analysis

FROM: L. Engle, Project Manager, Light Water Reactors Branch  
 No. 1

THRU: J. Stolz, Chief, Light Water Reactors Branch No. 1

SUBJECT: FORTHCOMING STAFF EVALUATION OF THE DAVIS BESSE, UNIT 1  
 ADDITIONAL ONE YEAR METEOROLOGICAL DATA (AUGUST 1975 TO  
 AUGUST 1976)

As you know, we requested on October 1, 1976 (per your recent evaluation of the revised Davis Besse, Unit 1 meteorological data) that the applicant provide an additional one year of meteorological data in order to verify that the relative concentration values for Davis Besse, Unit 1 are representative and conservative.

Our latest communication with the applicant concerning these matters indicates that the requested additional one year data will be sent to us for review on November 19, 1976.

Present scheduling calls for the Davis Besse 1 SER to be issued in November 1976 and for the ACRS (full committee) meeting in December 1976. Issuance of an OL for this facility is presently scheduled for February 1977.

We request that you schedule your review and provide the appropriate SER writeup for the additional one year meteorological data (confirmation of the presently revised X/Q values or new revised X/Q values) as quickly as possible upon receipt of the applicant's submittal.

The Davis Besse, Unit 1 relative concentration values and the interfacing dose rates are critical items for OL licensing of Davis Besse, Unit 1.
