MEMORANDUM FOR: N. C. Moseley, Director, RII

FROM: J. H. Sniezek, Assistant Director for Field
Coordination, Division of Reactor Operations Inspection, IE

SUBJECT: FLORIDA POWER & LIGHT CO. (ST. LUCIE UNIT NO. 1) - ALLEGA-
TIONS RELATIVE TO PIPE HANGERS AND RESTRAINTS 50-546

As discussed by telecon, we believe that additional justification for closing out IE review and evaluation of the issue is warranted. Taking into account facility status, the general vagueness of the allegations, and the inaccessibility of the alleged, it appears appropriate that Inspection Procedure 61721B be conducted in the near future, if not yet conducted. Likewise, because of the nature of the allegations, Procedure 61721B should, as a minimum, be supplemented by the following line items from Inspection Procedure 50090B, if such activities were not previously conducted by the Region:

- 1.b, 1.c, 1.d
- 2.a, 2b(1), 2b(2)
- 3.c(1)a
- 4.(1), 4(2), 4(3).

The Ebasco and/or Bergen-Patterson calculation records for St. Lucie should be reviewed on a sampling basis in conjunction with the LCVIP program as deemed appropriate by Region II. IE actions regarding this matter should be documented in a manner that provides a basis for our conclusion that the subject allegations have no substance.

Please advise us of your plans regarding this matter.

J. H. Sniezek
