Docket No. 50-346

V. Moore, Assistant Director for Light Water Reactors, Group 2, L
SAFETY EVALUATION REPORT FOR DAVIS-BESSE NUCLEAR POWER STATION, UNIT 1

Plant Name: Davis-Besse, Unit 1
Licensing Stage: OL
Docket Number: 50-346
Responsible Branch: LWR 2-3
Requested Completion Date: February 7, 1975
Project Leader: L. Engle
Description of Response: Safety Evaluation Report
Review Status: Complete

POOR ORIGINAL

Enclosed is the Radioactive Waste Management Section for use in the Safety Evaluation Report for Davis-Besse Nuclear Power Station, Unit 1. In the PSAR the applicant proposed modifications to the liquid, gaseous, and solid radwaste systems. As a result of our evaluation, we found that the modifications reduced the amounts of radioactive materials released to the environment.

The applicant uses state-of-the-art technology for the liquid, gaseous, and solid radwaste systems, and the systems are designed to acceptable codes and standards. We find these modified systems acceptable.
