## PROCEEDINGS

. 11	
2	CHAIRMAN RIGLER: Mr. Reynolds, did you have
3	anything further you wish to add this morning in response
4	to the case citations upon use of deposition testimony
5	that Mr. Charno gave us yesterday?
6	MR. REYNOLDS: Yes, Mr. Chairman, I do.
7	I think that the Government's cases, as I
8	understand them, do support the proposition essentially
9	that the Government cited them for, except that I think it
10	may have been overstated by the government to the extent
11	that, as I understand the position of Mr. Charno, he indicated
12	if the Board failed to introduce designated portions of
13	depositions of parties that that would be reversible
14	error.
15	I think that one of the four cases would lend
16	support to that conclusion. However, that was a situation,
17	and I'm referring to the Community Counseling v. Reilly
13	discussion that was a situation where the Court of Appeals
19	held it was reversible error on the particular facts of that

case not to admit the deposition in order to demonstrate the ---let me rephrase it.

That it was reversible error, because the District Court had indicated that the moving party had not met its burden of proof in that fact situation and had declined in making that determination to take into account the deposition testimony.

ES1

19

20

21

22

23

24

2	
1	I think the context of that decision, it held
2	that the failure in that instance to take into account the
3	deposition testimony was reversible error.
4	I don't read that decision to stand for the
£	general proposition that the inilars of this Board or a
ő	Court to introduce or to accept deposition tattimony would
7	in all cases be reversible error, and I think that the
6	other three cases that were clued by the government, while
9	they do support the proposition that it is parmissible
10	to accept deposition testimony of a party, don't go so far
11	as to say the failure to do so would be moversible error.
12	CHAIRMAN RIGLER: Lat me interruph you have.
13	I had not understood Mr. Charno's argument to
14	be that this Board would commit reversible error by refusing
15	to admit deposition testimony, but merely that is could be
16	reversible error in the Federal Court.
17	MR. REYNOLOS: I thought if he said if is way
18	reversible error in the Pederal Court, then a <u>forthori</u>
19	it would be reversible error with respons to this Seard.
20	CHAIRMAN RIGLER: I thought he argued if it was
21	reversible error in the Federal Court that the more liberal
23	rules of administrative aganoies could remains a like
23	result.
24	Mowever, he can clear that up or you cun clear it
25	up on the record.

1 2 arl

MR. REYNOLDS: I would let him clear that up. 1 I don't want to be in a position of mischaracterizing his 2 statement. 3 CHAIRMAN RIGLER: Maybe I misunderstood what he 4 said vesterday. 5 MR. REYNOLDS: The point I want to make is if his 6 position was that the cases cited locked this Board into a 7 reversible error position in the event that this Board E should conclude not to accept the deposition testimony, S then I would guarrel with his reading of the cases. 10 If he is saving that those cases do stand for the 11 proposition that this Board can appropriately -- or that 12 the Courts can appropriately, and therefore under the more 13 liberal rules that this Board can appropriately accept 14 deposition testimony of parties, I have to say I agree 15 with his reading of those cases. 16 Given that, I would summarize the position of 17 the applicants to be that to the extent the excerpts of 18 deposition testimony which the Department intends to 19 introduce relate to deponents who are officers, directors 20 or managing agents of the company, I would have to say that 21 I think this Board does have the legal authority to 22 accept the deposition testimony of those individuals. 23 I do not think that any of the cases cited by 24

Mr. Charno and I don't know of any other cases, stand

ar2

3	5993
í	for the proposition that deposition testimony of
2	individuals other than directors, officers, or managing
3	agents can be introduced and used in lieu of having
4	the witness appear and testify.
5	Indeed, I think that the limitation in Rule 32
6	to officers, directors or managing agents would support the
7	notion that when we are dealing with individuals other
С	than that, they should be brought in and should testify
9	that those individuals are not parties in the intended
10	meaning of that or use of that term in the cases that Mr.
11	Charno cited or in the rule.
12	I think that the law also indicates that it
13	is the Department's burden to show which individuals fit
14	into the category of managing agent. We would be
15	prepared to stipulate who was an officer or director at
16	the time of the deposition, but as to managing agents,
17	it is the Department's burden of proof to show which
18	individuals were managing agents and that is to be
19	determined on a case-by-case basis.
20	I would cite the board to Trosevs,
21	T-r-o-s-e-u-s, vs. Anchor Line Limited, at
22	26 Federal Rules, Decision 165, District of New York 1960,
23	which indicates that the Department would have the
24	burden in this regard.
25	

ar3

and 2

S3 bwl

1	
1	Ard I would also point out that in terms of
2	who is a managing agent, we do know that in-house general
3	counsel, for example, would not be considered a managing
4	agent. And on that one, let me direct the Board's
5	attention to Schilling, S-c-h-i-l-l-i-n-g, hyphen
6	Hillier, H-i-l-l-i-e-r, and then a bunch of initials,
7	SAIEC versus Virginia Carolina Chemical Corporation, 19
8	Federal Rules Decision 271, 274, in the Southern District
9	of New York, 1956. Also a distributing agent is not considered
10	to be a managing agent. And for that I will cite
11	Gillam, G-i-l-l-a-m, versus A. Schyman at 22 Federal Rules
12	decision 475, District of Alaska 1958 and also the manager
13	of a sales division, department or the supervision of
14	sales and shipping is not considered to be a managing
15	agent.
16	It is indicated in Colonial Capital Company
17	versus General Motors Corporation, 29 Federal Rules
18	decision 514, District of Connecticut, 1961.
19	I would also point out, in addition, that
20	Moore on Federal Practice indicates that the test as to
21	who is or is not a managing agent within the scope of the
22	rule is similar to the test used for service of process
23	under Rule 4 and that appears at Volume 4-A of Moore
24	on Federal Practice, paragraph 32.04 at page 32-20 to 32-21.
25	So, in short, it is our view that as to

officers and directors and those individuals whom the Department can sustain its burden of proof to be managing agents as to, that this Board has the legal authority to use excerpted portions of those depositions.

5995

We would continue to maintain that that is not a judicious exercise of discretion, and we would object to the use of depositions of those individuals. If the Board rules otherwise, we would reserve the right to red-line those portions of the deposition that the Department and not chosen to red-line, which would be related to the excerpted portions they have red-lined.

And we reserve the right to call those people as witnesses on the Applicants' affirmative case.

As to deposition testimony of individuals who do not fit within the category of a party, i.e., an officer, director or managing agent, we do not think that the Board has the authority to look to the deposition testimony of those individuals, but that they must be called to testify, and we would object to the use of any portions of those depositions or the introduction of any portions of those depositions.

CHAIRMAN RIGLER: What is your authority for the proposition that we may not use the depositions of employees other than officers, directors or managing agents.

20

21

22

23

24

1	MR. REYMOLDS: The Federal Rules would indicate
2	that the use of depositions is limited to those depositions
3	of parties.
4	I think the Federal Rules have a hundrad-mile
5	limit which might, in the federal courts at least, give
6	rise to an argument that nonparties outside the hundrad-
7	mile limit or of the subposes power of the federal courts,
8	could, because of the hundred-mile limitation, that those
9	depositions could be used.
10	But I don't think the Commission has any such
11	limitation on its subposna power, so I fasl that is not a
12	legitimate basis to bootstrap the depositions of
13	nonparties into this proceeding.
14	I think that all of the cases that the
15	Government has cited, very clearly relate to deposition
16	testimony of parties.
17	I have not found any reference of cases
13	which speak to the matter of deposition testimony
19	being introduced of nonparties.
20	However, let me also add that given he time
21	period I had to look into this question, I am sure
22	that that research is not exhausted.
23	CHAIRMAN RIGLER: I'm not sure. After all, you
24	filed a pleading on it. The last few minutes or your
25	argument paralleled colsely the first footnote in the

bw3

-----

bw4	5997
1	pleading you filed.
2	Apparently, you have had opportunity to look
3	into this.
4	MR. REYNOLDS: I indicated I have not had
5	the opportunity.
6	CHAIRMAN RIGLER: Do I gather from what you
7	said just now, that you have no authority in support of
8	the proposition that the Board may not utilize depositions
9	of employees other than your analogy to the Federal Rules?
10	MR. REYNOLDS: I have not see any cases that
11	would support that proposition. The Faderal Rules, it
12	seems to me, are very clear in indicating that the
13	authority to use depositions is limited to the depositions
14	of parties.
15	CHAIRMAN RIGLER: Thank you.
16	MR. CHARMO: I think I can respond vary briefly.
17	Let me clarify the argument the Department
18	was making yesterday.
19	We were citing the four cases we cited
20	for the proposition that it was an error or would be an
21	error, as a matter of law to exclude the deposition
22	testimony of a party opponent.
23	CHAIRMAN RIGLER: In an NRC proceeding or in
24	a federal court proceeding?
25	MR. CHARNO: In a federal court proceeding.

The second second

bw5	
2	In other words, we are saying it is not discretionary.
	It is error. Whether or not it is reversible error, depends,
2	as Counsel pointed out, on the facts of the case, and
3	whether that error can be subsequently remadied or is
4	subsequently remedied.
5	It is clear that it is not, in our minds,
6	discretionary with respect to the deposition of a party.
7	To respond to the statements concarning
0	managing agents, I would like to quite briefly from
9	Wright on the Law of the Federal Courts,
10	Second Edition, 1970.
11	
12	
13	
14	
15

22	
23	
24	
25	

ES3

And leaving out, unless requested by the Board, the supporting citations, I would guote from page 374.

5999

"Though the question of whether a particular person is a managing agent is to be answered pragmatically on an ad hoc basis, the Courts look to see if the individual involved is invested by the corporation with general powers to exercise his discretion and judgment in dealing with corporate matters. Whether he can be depended upon to carry out his employer's direction, to give testimony at the demand of a party engaged in litigation with the employer, and whether he can be expected to identify himself with the interests of the corporation rather than with those of other parties."

These are the three basic tests that have been
utilized by the Courts in a multitude of decisions to
determine whether or not a specific individual under
specific circumstances is a managing agent.

We don't believe that the cases cited by Applicants under the prevailing rule of law which we have just presented have a binding effect or should have a binding effect as to a determination as to one of their employees and whether that employee is a managing agent in the context of his duties and with respect to the testimony he gave on deposition.

Finally, we would note that with respect to the

arl

1

2

3

4

5

6

7

8

9

10

11

12

13

100-mile rule referred to by counsel which sets forth in Rule 1 32(a)(3) of the Fedearl Rules, this is not an 2 obligatory direction concerning the use of depositions. 3 This is discretionary as to whether or not a Federal Court 2 may use the depositions of a deponent who resides over 100 5 miles from the place of the hearing. 6 We would note that this rule is applicable in 7 antitrust cases and in antitrust cases there is nationvide 2 service of process provided for in the antitrust laws. 9 We would further note that the 100-mile rule 10 doesn't even -- the 100-mile area doesn't even remotely 11 approximate service of process in a number of districts 12 throughout the country. 13 This rule is for the convenience of witnesses 14 so that they won't have to travel more than 100 miles 15 if their deposition could be used in place of their 16 testimony, for the convenience of the parties who wouldn't 17 have to transport them. 18 We would say that it is definitely relevant here, 19 and certainly gives a Federal District Court the discretion 20 to admit such a deposition. We would argue again 21 under the broader rules of evidence applicable in the 22 Nuclear Regulatory Commission that this Board would have 23 discretion to admit the deposition of a non-managing agent, 24 employee of one of the Applicants.

ar2

25

	6001
1	CHAIRMAN RIGLER: Thank you.
2	Would you like to recall Mr. Kampmeier?
3	MR. CHARNO: Mr. Kampmeier, will you take
4	the stand, please?
5	Whereupon,
6	ROLAND KAMPMETER
7	resumed the stand as a witness on behalf of the Department
8	of Justice and, having been previously duly sworn, was
9	examined and testified further as follows:
10	CROSS-EXAMINATION (Continued)
11	BY MR. REYNOLDS:
12	Q Mr. Kampmeier, would you take a look for me at
13	the exhibits that were introduced with your testimony, the
14	National Electric Rate Bock for Ohio and Pennsylvania
15	or the excerpts? They were Exhibits 451 and 452 of the
13	Department of Justice.
:7	A All right.
18	Q Let me ask you, if you will, to look first at the
19	rate schedules for Ohio. Page 14 is the Ohio Edison
20	industrial rate schedule; is that correct?
21	A There are several there, right.
22	Q And Ohio Edison has several rate industrial
23	rate schedules; is that right?
24	A Right.
25	Q And is the one that has the red line beside it

ar3

	6002
1	the rate schedule that you used in connection with your
2	comparison that is set forth in your direct testimony
3	on page 34?
4	A Yes.
5	Q Would you explain for me the difference between
6	the applicability of the high tension light and power
7	industrial schedule which is paren 116 and appears on the
8	far left-hand column of page 14? And it is immediately
9	above the one red-lined.
10	Could you compare the could you explain the
11	difference between the applicability of that and the
12	red-line schedule for high tension industrial service
13	(117)?
14	A There are more similarities than differences
15	as to availability.
16	Q Could you explain the differences?
17	A I was coming to that. The one is applicable
18	apparently to any load over 50 kVa.
19	The second, any load over 100 kva.
20	Those are the respective minimum billing demands.
21	At the moment that is the only difference in availability
22	that I note.
23	Q What about the difference in the character of
24	service between the two schedules?
25	A Well, the one is available at voltages below 15,000

H

ar4

ar5	5003
1	volts, 15 kV, and the other above that voltage. This is
2	one reason that I made my applied my comparisons
3	to the second, because the municipal contracts I believe also
4	call for the rates being applicable for delivery at above
5	15 kV.
ũ	Q What is the difference in the character of
7	service between Schedule 117, which is red-lined, and
e	the one directly below that, 118, high tension light and
2	power?
10	A The 118 calls for minimum billing demand of 1000
11	kva.
12	Q What is the difference in the character of
13	service?
14	A Well, character of service under 118 says same
15	as 117. Service hereunder is not available from feeders
16	serving a secondary network system.
17	Q What does that mean?
18	A I'm not too surs what it means in this context,
19	Whatever it may mean, I didn't consider it had any bearing
20	because that rate turned out to be a higher rate, and
21	therefore since it was, if anything, more restrictive in its
22	availability, any customer would prefer to be served under
23	117 than 118, and there was nothing to indicate he didn't
24	have that choice.
25	Q Why didn't you compare the municipal quatomars

-----

----

ar6	6004
1	rate with 118?
2	A Because any industrial customer who they might
3	compare it with apparently has the right to be served
4	under 117, which is a lower mate.
5	Q What is the basis for thinking that there is a
6	choice involved?
7	A Because it doesn't indicate otherwise, and if
8	you publish a mate schedule and it doesn't say that it is
9	not available to such and such people, then it is presumed
10	to be available.
11	Q Which of these industrial customers which
12	industrial customers under these achedules would you
13	think that the municipal customers of Ohio Edison may
14	be more likely to serve?
15	MR. CHAPNO: I think I'm going to object to
16	that question. I don't understand it.
17	MR. REYNOLDS: Did you understand the question?
18	THE WITNESS: No.
19	BY MR. REYNOLDS:
20	Q Would you expect the wholesale customers of
21	Ohio Edison to serve industrial customers under 15 kva or
22	over 15 kva for the most part?
23	A You are speaking about the retail customers of
24	the municipalities?
25	Q That's right.

-----

ar7	6005
1	A Well, like the other utilities in the area, I would
2	assume they would have more under 15 kva than over.
3	Q Then why wouldn't the industrial rate 116 be a
4	more appropriate rate to use for comparison with the
5	wholesale customers rate?
6	A Because I don't know any of these municipalities
7	whose total load is less than 15 kwa or in that order.
ß	We are comparing the rate to the municipality which has a
9	load of, say, 10, 15, 20,000 kva with the rate to an
10	industry of comparable size.
11	Q In terms of their ability to compete, wouldn't it
12	be more relevant to look at the rate of the industrial
13	customers that the munis are most likely to be serving?
14	MR. CHARNO: For clarification of the record, whose
15	ability to competa?
16	BY MR. REYNOLDS
17	Q The wholesale customers of Ohio Edison?
18	A No. The point that I assume we are addressing
19	here, certainly that I address my testimony to, was whether
20	the municipalities' ability to compete in any retail
21	business is hampered by their having to pay an unduly high
22	price for the power they buy, and it was a comparison
23	of that power they buy with what would be paid by an
24	industrial user buying a similar amount of power, which is
25	the test I suggested, and which I assume we are
1	

****

ar8	6006
1	discussing, unless you tell me otherwise.
2	Q I thought you just said that most industrial
3	customers of the munis would use rate 116?
4	A I said that. I don't see its relevance to the
5	other question.
6	CHAIRMAN RIGLER: Mr. Reynolds, are you saying
7	that an industrual customer of the municipal would
8	purchase from the municipal at the rate stated under 116?
9	MR. REYNOLDS: I'm saying that the municipal's
10	industrial customers for the most part would be the type
11	of customer that would be purchasing from Ohio Edison under
12	rate 116.
13	CHAIRMAN RIGLER: All right.
14	MR. REYNOLDS: And for comparison purposes,
15	therefore, the rate to the wholesale customers should be
16	compared with the 116 industrial rate, which is the
17	competition that the wholesale customer would have to
13	meet. That is the alleged price squeeze.
19	MR. SMITH: Do you go an additional step and
20	suggest that under the 118 schedule that there is a
21	sufficient spread between that schedule and 116 to permit
22	the municipal to compete for that wholesals load, that
23	industrial load?
24	MR. REYNOLDS: Yes, we will get to that.
25	MR. SMITH: I anticipated you.

and the second s

ar9	6007
1	BY MR. REYNOLDS:
2	Q Do you know what criteria Ohic Edison uses to
3	apply these industrial schedules to their industrial
4	customers?
5	A No, I do not, asida from what is stated here.
6	There is supposed to be stated here all of the conditions
7	of applicability.
end 5 3

13	
14	
15	
16	
17	
18	
19	
20	
21	
22	
23	
24	
25	

	6008
1	Do you know whether the Chio Edison's municipal
2	load factor is for its wholesale customers, is more
3	similar to the load factor that is contemplated for
4	industrials in 115, 217 or 113?
5	A 117.
6	Q And what is the basis for that?
7	A Looking at the figures and the company's report
8	to the Federal Power Commission and its formal report, which
9	shows sales under the several rate schedules and gives
10	kilowatts and kilowatt hours and permits one to make some
11	analysis of typical load factors indicated under the
12	different rate schedules.
13	And the customers served under the 117
14	schedule are more comparable in size and load factor to
15	the municipalities than the customers served under the
16	other rate schedules.
17	Q What is the load factor of the industrials
18	served under 117?
19	A. I don't remember the figure.
20	I made that comparison. I would be glad, if
21	you have a copy handy of the reports to FPC, to lock up
22	the numbers.
23	Q Do you know what the load factor is for the
24	industrials served under 113?
25	A Same answer

bw1

-----

1	Q Is your answer the same with respect to the
2	load factors for industrials under 116?
3	A Yes.
4	Q Do you have copies of the studies you hade
5	or the analyses you made to determine the load factors
6	with respect to the industrials under each of those three?
7	A. They were done in my head.
3	It is a simple matter of locking at the numbers
9	and volume and dividing the kilowatt hours by the kilowatts
10	and numbers of customers and gotting average use per
11	customer, and average kilowatt hours per kilowatt, in
12	a range of which does not have to be procise numbers,
13	but the approximation talls you quickly which group
14	is more comparable to the municipal group.
15	I can repeat the calculations for you quickly
16	here, if you provide a copy of the reports to the FFC.
17	Q How many industrial customers were there in each
18	class that you analyzee?
19	A Here I counda't trust my memory very far. I
20	believe the number in the 117 groups, which was the most
21	pertinent, was in the general order of 50 to 100 or so
22	industries.
23	There was a considerably larger number under 116.
24	Off-hand I don't remember how many under 118.
25	Q Do you recall roughly what the difference in

bw2

bw3	1	load factors was with each of these groups of customers?
	2	No, I do not.
	3	Q And the Hunys?
	4	A NO.
	5	Q Was it larg or a small difference?
ES6	6	A I can't expand on what I said before about that.
S7	7	Q Let me ask you to look at the National Electric
	8	Rate Book excarpt, DJ Exhibit 452, which is the
	9	Pennsylvania Industrial Rate Schedule. What is the difference
	10	in the character of service between Rate Schedule 50 and
	11	51, as shown on page 10?
	12	A It is a difference similar to, and I believe,
	13	identical with the case you refer to with the Chio Edison
	14	schedules.
	15	Sechedule 50 is applicable below 15,000 volts and
	16	Schedule 51 abobe 15,000 volts. While we are on that
	17	poin t, let me add, and I should have said it before in
	:8	referring to the earlier questions about which schedule is
	19	more comparable, it would obviously not be appropriate, even
	20	aside from the reasons I gave to compare a rate schedule,
	21	based on delivery at voltage of less than 15,000 volts
	22	and, therefore, a higher rate, to the vates to the municipalities
	23	who take serve at more than 15,000 volts.
	24	MR. SMITH: Before you leave this line of
	25	questioning, I have a few questions to ask.

and a state of the state of the

1	MR. REYNOLDS: I'm not about to leave yet. I'm
2	still on this.
3	Let me have the last enswer back.
4	(The reporter read the record as requested.)
5	BY MR. REYNOLDS:
6	QMr. Kampmeier, do any of the municipal customers
7	of Pennsylvania Power have facilities that take power at
8	15,000 volts or above?
9	A. That was my recollection.
10	Now, I can cite you specifics in the case of
11	Ohio Edison, because I happen to have a sample with
12	me in my notebook.
13	I don't have the Pennsylvania one.
14	Q If, in fact, no municipal customers of
15	Pennsylvania Power have facilities that can take power at
16	15,000 volts or above, then wouldn't the proper schedule
17	for comparison be 50 rather than 51?
18	A I would have to re-examine that. It
19	night be. I'm not sure.
20	- Q Can you tell by a look at those two rate
21	schedules whether rate 50 is higher than rate 51?
22	A Rate 50 is higher than rate 51, yes.
23	I must say it is hard to tell just by locking
24	at them, because of their complexity they are unucually
23	and unnecessarily complex.

bw4

bw5	
1	But I have made the calculation sufficiently
2	to show for myself that 50 is higher than 51.
3	Q How did you arrive at the decision to use
4	Schedule 51?
5	A For the same reasons that I stated in the case
6	of the ohio Edison comparison between Schedule 117 and 118.

ar 1 1 Is that because it was your view that the 0 2 customer had the choice to be on the lover of the two 3 schedules? 4 That was one element, assuming he is prepared to A take at a specified voltage level, yes, he has a choice. 5 The other more crucial elements I mentioned were 3 comparing the size of the municipal load and their load 7 factors with the size and load factors of the industry 3 served under these several rate schedules. And which ŝ therefore one should look at if one is talking about 10 sales to municipalities and to a comparable -- and to 11 an industry with comparable loads. 12 0 And why did you not select the 52? 13 Again for the same reasons I stated. It has a A 14 somewhat higher rate level and I think that customers 15 therefore tend to gravitate to 51 rather than 52. 16 At any rate, the ones comparable in size to 17 the municipalities are found under 51. 18 0 Do you know how many industrial customers are 19 served under 51 as opposed to 52? 20 I don't recall any more. A 21 0 You did make that analysis at one point? 22 Yes. A 23 Again, I would be glad, if you want to show me 24 the report to the FPC, to run through it with you. 25

6013

#7

:2		6014
	1	Q Which had more industrial customers?
	2	A I don't ramember. There are one or two other
	3	differences between these schedules and the schedules of
	4	the municipalities.
	5	Q There is no question pending.
	6	A I was trying to recall whether that was one of
	7	the things you asked me about where I may not have completely
	8	answered.
	9	MR. REYNOLDS: Mr. Smith, do you want to ask
	10	questions on the rate schedule?
	11	MR. SMITH: I think that I would like to defer
	12	if the Department is going to inquire further into this subject
	13	matter. Perhaps it will be racolved. If not, I will ask
	14	then.
	15	Will you be going into this, Mr. Charno?
	16	MR. CHARNO: Yes, I will.
	17	MR. SMITH: I will be interested in knowing
	18	my questions might center around what effact, if any,
	19	industrial rates are influenced by the desire or the
	20	efforts on the part of utilities to attract industry into
	21	their areas. To what extent this introduces a competitive
	22	factor to utilities in other regions of the country, and
	23	the extent that the state utilities commission take
	24	cognizance of this and the extent to which the state
	25	utility commissions taking cognizance of the fact that
	1	

ar

ar3	6015
1	the municipalities could use this same concept if they had
2	the rate, necessary rate, correct races to compete for
3	industry vis-a-vis other parts of the country.
4	Have I muddied that up?
5	MR. CHARNO: I think we will cover that area,
6	yes.
7	BY MR. REYNOLDS:
3	Q Mr. Kampmeier, are you aware of a report issued
9	by the Tennessee Valley Authority that stiples that the low
10	rates of the Tennessee Valley Authority for induscrial
11	customers has not tended to attract industry away from other
12	areas?
13	MR. CHARNO: Could we have a date for that
14	report?
15	MR. REYNOLDS: Late '60s. '63?
16	THE WITNESS: I don't recall one around that time.
17	I recall one quite a few years sarlier than that.
15	BY MR. REYNOLDS:
19	Q You say
20	CHAIRMAN RIGLER: Ask him if TVA ever formed any
21	conclusion with respect to whether low electric rates
22	tended to draw industry from other sections of the country.
23	BY MR. REYNOLDS:
24	Q Can you answer that question, Mr. Manymeder?
25	A I think so.
11	

i

6016 1 I think it is necessary in answering that 2 question to make a careful distinction between two different 3 things: 4 One is auracting new industrial plants which are looking around the country for a place to locate, and 5 the other is a question of whether industries close down a 6 plant in one area and move to another area because of low 7 rates. 8 The answers are different. On the first point, 9 the conclusions TVA found was that its rates have encouraged 10 industrial development in the Tennessee Valey with a good 11 many new industrial plants being established there which 12 might presumably have been established somewhere else. 13 On the question of whether this has led --14 the low rates have led industries to move to the area from 15 somewhere else, they were able to find on the occasion I 16 recall, which was a number of years ago, two examples, both 17 quite small over a period of 20 years or more. 18 0 What kind of industries generally were attracted 19 by lower rates to locate in the TVA area? 20 Large electro-process industries, which use A 21 large quantities of power, and which therefore have 22 relatively high power costs in relation to other companies. 23 Can you give me some order of magnitude as 0 24 to how large an industrial you are talking about? 25

ar4

ar5	6017
1	A Well, it ranges widely. The more typicals
2	ones might use from 20,000 kilowatts to 300,000 kilowatts.
3	Q Those are the industrials of the size which
4	the municipalities of TVA would not be expected to serve,
5	but rather TVA would serve directly?
6	A No. Some of them on the lower side of the
7	range are served by the municipalities.
8	Q Would you expect, Mr. Kampmeder, that there
S	would be many industrials of 20,000 kwa and above that
10	would locate in an area which was served by a small
11	municipality?
12	A I don't know what you mean by many. There
13	are several dozens of them in the Tennessee Valley.
14	Q What about in Ohio?
15	A I don't see any reason why Ohio woulda't tend
16	to attract similar kinds of industries. The CAPCO area
17	is a more industrialized area than the Tennesses Valley.
18	Q Mr. Kampmeier, did you make any studies to
19	determine what proportion of the fixed costs are included
20	in the demand charge under Ohio Edison's rate schedule for
21	municipal systems compared to Ohio Edison's industrial
22	rate schedule?
23	A No. I think that falls within the answer
24	I gave yesterday that I have not made any detailed cost
25	studies for Ohio Edison.

----

ar6	6013
1	Q Let's assume a municipal system with a peak
2	demand of 10 megawatts; under its purchase power rate, that
3	systam would pay to the wholesale supplier for a 10 megawatt
4	demand charge, would it not?
5	THE WITNESS: Would you repeat the question,
6	please?
7	(Whereupon, the reporter read the
8	pending question, as requested.)
9	THE WITNESS: I don't want to be nit-picking,
10	but the demand charge is based on kva, rather than kilowatts.
11	Of course, I assume when you asked the question the way
12	you did, you are also asking about the demand charge in the
13	particular month in which that peak was established.
14	That would necessarily be the demand charge of another
15	month.
16	BY MR. REYNOLDS:
17	Q Say 10,100 kva demand. Assume that system
18	adds an industrial customer with a peak demand of 10,000
19	kva. It would charge that customer under its rate
20	schedule for 10,000 kva, wouldn't it?
21	A Presumably, yes.
22	Q Now assume that that 10,000 kva industrial
23	customer has a peak demand of 10,000 kva, but only 8000
24	kva of that demand occurs at the time of the municipality's
25	peak demand, thereby raising the municipality's peak from

----

a	r7	6019
	1	10,000 kva to 18,000 kva?
	2	A Yes.
	з	Q The municipal aust now pay its wholesale
	4	supplier the demand charge for 18,000 kva, isn't that right?
	5	A Right.
	6	Q Now under the assumptions that we have just
	7	discussed, is it not true that the municipal would charge
	8	its industrial customer its rate for 10,000 kva while
	Ð	increasing its payment to the wholesale supplier by a
	10	charge for only 8000 additional kva?
	11	A That's correct, under the assumptions you stated.
	12	Right.
9	13	
	14	
	15	
	16	
	17	
	18	
	19	
	20	
	21	
	22	
	23	
	24	
	25	

nd

Moreover, the additional -- moreover the additional a S10 1 8,000 kva of the wholesale customer's demand would be 2 charged at its lowest demand block of the wholesale 3 suppliers rate schedule, while the municipality would charge 4 its industrial customer form its initial highest demand 5 block on the rate schedule; isn't that correct? 6 That is correc.t A. 7 And wouldn't it also be true that the energy 0 8 charge paid by the municipal to its wholesale supplier 9 for the kilowatt hours associated with its sale to the 10 industrial customer would be paid for from the 11 municipality's lowest energy block on the supplier's :2 rate schedule, while the municipality, in turn, would :3 charge the industrial customer at its initial highest 14 energy block? 15 That is correct. A 16 Doesn't it follow then that a simple comparison a 17 of the wholesale supplier's wholesale industrial -- the 13 whole supplier's and industrials rates -- strike that and 19 let me say it again. 20 Doesn't it follow that a simple comparison of a a 21 wholesale supplier's wholesale rate and industrial rate 22 does not indicate whether there is a price squeeze? 23 No, that does not follow. A 24 Why not? a 25

Dw1

	비행 위험 방법에 가장 이 것 같아요.
1	A Let me try to explain. Exactly the same elements,
2	providing some margins for a municipality in serving an
3	industrial load apply to the invastor-owned utility, if it
4	is supplying the industrial load.
5	If, however, the investor-owned utility is supplying
6	to the municipality, the power which the monicipality is
7	going to resell, and the municipality has to pay significantly
5	more for that power than, in effect, it is costing the
9	investor-owned wtility, and it would be justified on a
10	cost-related basis, justified as indicated by the
11	sort of rate comparisons that I have been talking about, then
12	the price squeeze is still there.
13	It doesn't alter the price squeeze at all,
:4	where one particular industry served either by the investor-
15	owned utility or the municipality happens to have its
16	peak right on top of the system peak or another one is
17	completely off the system peak.
18	The conditions are the same in terms of the question
19	of the relative cost of the wholesale product that is
20	involved.
21	And if there is a differential there
22	that is unjustified, then you have a price squueze.
23	
24	
25	
1	

bw2

ES10

11

BY MR. REYNOLDS:

1.1	DI MA. MITHOUDD.
2	Q Isn't it true that under the conditions you
3	pose that if the wholesale customer if the wholesale
4	customer charged its industrial customer exactly the
5	same industrial rate that the wholesale supplier charged
6	its industrial customer, that the and the wholesale
7	rate was the same as the industrial rate, then the
3	wholesale supplier would pay its wholesale let me start
9	over again.
10	CHAIRMAN RIGLER: While you are wrestling with
11	your question, let me ask the witness a question or two.
12	In the example Mr. Reynolds gave, it was
13	indicated that the municipality was making money on
14	the resale of power to its industrial customers.
15	THE WITNESS: To this particular industrial
16	customer, right.
17	CHAIRMAN RIGLER: Wouldn't they make more money
18	if the municipality was purchasing at the
19	industrial rate all along?
20	THE WITNESS: Exactly.
21	BY MR. REYNOLDS:
22	Q That would depend on what the industrial rate is,
23	wouldn't it?
24	A If you were premising a different condition
25	than we have been talking about, one in which the rates to

6022

\$11

arl

1	the municipality is lowar than the industrial rate,
2	then my answer would be different in that context.
3	MR. REYNOLDS: Why don't we take five minutes?
4	CHAIRMAN RIGIER: All right.
10	(Recess.)
õ	BY MR. REYNOLDS:
7	Q Mr. Kampmeier, under the conditions that we
S	discussed regarding the 10,000 kva system and
9	the addition of an industrial customer with a peak demand
10	of 10,000 kva, is it not true that the wholesale municipal
11	customer is paying to its supplier for fewer kya than it is
12	selling to its industrial customer?
13	A That's correct.
14	Q Isn't it impossible, without making a study,
15	to determine solely from the face of a wholesala supplier's
16	wholesale rate and industrial rate, that the wholesale
17	customer could not offer a competitive price to a given
18	industrial customer and still turn a profit?
19	A Would you read that question again?
20	(Whersupon, the reporter read the
21	pending question, as requested.)
22	THE WITNESS: I will have to ask you to read
23	that one more time.
24	(Whereupon, the reporter reread
25	the pending question, as requested.)
1.1	

ar2

1 THE WITNESS: It depends on the particular 2 customer, particular industrial customer and the nature 3 of his requirements. I think in some cases it would be 4 easy to arrive at a conclusion without a detailed study .. 5 In other cases, it would require a detailed study. Detailed 6 meaning running through rate schedules and so on, at least 7 as a first step. That might be sufficient -- 15, 20 8 minutes work might be sufficient to answer the question 9 and it might not. If it is a very close question, then 10 you would have to get into further analysis of cost factors, 11 investment factors in serving the industrial customer. 12 BY MR. REYNOLDS: 13 0 Did you go through that kind of analysis? 14 A No, because it wasn't relevant to what I was 15 testifying to. 16 Q Would you define for me what your understanding 17 is of the term "price squaeze"? 18 19 20 21 22

6024

end 12

23

24

25

ar3

00.1		
:13	1	A Yes. In layman's terms, my understanding is that
bwl	2	if a company which is serving customers, both at wholesals
	3	and at retail, who offers cartain prices to his large
	4	retail customers, if he then refuses to sell to wholesale
	5	customers forresale, at terms which would be reasonably
	6	compatible with the terms I just referred to for his sales
	7	to the large retail customers, but rather, demands a
	8	substantially higher price, thereby hampering the distributor
	9	in its ability to compete for such retail customers, that
	10	this constitutes a condition of price squeeze.
	11	Q I see.
	12	And it is your view that in order to form a
	13	judgment regarding price squeeze, that a study that would
	14	to to whether or not the rate charged to the wholesals
	15	customer was such as to hamper its ability to compete and
	16	turn a profit, would not be relevant to whether or not
	17	there existed a price squeeze?
	13	A Well, hampering its ability
	19	CHAIRMAN RIGLER: Mr. Reynolds, I will
	20	interrupt you on that, because I don't recall the Witness
	21	testifying to that.
	22	That is so far from what he said, that I think
	23	the question is improper.
	24	MR. REYNOLDS: Would you read two questions
	25	before and from there right through.

S13

	7	(The reporter read the record as requested.)
bw2	2	MR. REYNOLDS: Can be finish the answor?
242	з	CHAIRMAN RIGLER: No.
	4	You may rephrase your question.
	5	BY MR. REYNOLDS:
	õ	Q What was the intention of your testimony as
	7	set forth at pages 34 and 34?
	5	A Well, specifically, it was to provide enswers to
ES13	S	the question at the top of page 34, in the CAPCO area
SII	10	can small systems buy power at lower prices then systems
	1.	with similar energy and demand requirements?
	12	MR. REINCLES: Was that testinony also in
	13	your view deemed relevant to Question 61 on page 312
	14	THE WITNESS: Yes.
	13	BY MR. REYNOLDS:
	16	Q Is it your testimony today that, insofar as
	17	you know, there is no price squeeze situation in Ohio
	18	Edison's service area?
	19	A No, that is not my testimeny.
	20	Q Is your testimony exactly to the contrary, that
	21	it is your judgment that there is a price squeeze situation
	22	in the Ohio Edison service territory?
	23	1 It so appears to ma.
	24	Q Does it appear to you without having
	25	undertaken any study other than the simple comparison of

-----

	6027
bw 3	the wholesale supplier's wholesale rate and industrial
	2 rate, with regard to whether or not the wholesale customer
	3 could not offer a competititve price to a given industrial
	4 customer and still turn a profit?
	5 A I believe I should be entitled at this point
	6 to explain a little bit.
	7 Q Could you answer the question, please.
	8 A Would you read the question, please.
	9 (The reporter read the pending question.)
,	MR. CHARNO: Objection, asked and answered at
	least twice.
	2 CHAIRMAN FIGLER: The objection is well-founded.
1	I will permit it, nonetheless, this one time.
	4 I think you have just about exhausted this
1	area, however.
	6 THE WITNESS: There is a double negative in
1	there, and other difficulty in following I will have to
	ask you to read it.
	(The reporter read the pending question.)
	THE WITNESS: I'm sorry, but I don't think that
2	guestion quite hangs together
. 2	You say doen it appear to no me
4 ~	
2	
2	
2	

ł

	-	6028
\$15	1	
arl		BY MR. REYNOLDS:
	2	Q It refers to your pravious statement concarning
	3	price squeeze. You indicated it appears to you there was
	4	a price squeeze situation.
	5	The question was whether that conclusion was
	6	drawn without undertaking the sort of study that I asked
	7	in the question.
	3	A Well, let me see whether by paraphrasing
	9	the question, I can be sure I'm answering the right
	10	question.
	11	Are you asking me this:
	12	Did I conclude without more detailed studies
	13	than I have described that a municipality might not be
	14	able to serve cortain industrial customers at a profit?
	15	Q Let me ask you this:
	16	Did you make your determination or form your
	17	judgment as to the existence of a price squeeze solely on
	18	the basis of the studies that you have described in your
	19	direct testimony and to the extent that you have discussed
	20	it on cross-examination today?
	21	A As reinforced by such circumstantial avidence
	2.2	as the various municipalities who have been unable to
	23	continue to remain in compatition with Ohio Edison.
	23	Q And which municipalities are you referring to?
	25	A Oh, for example, Norwalk I don't have my list

ar2	6029
1	divided up by company areas at the moment. I will stop
2	them for the moment.
3	Q What is the competition for industrial customers
4	between Norwalk and Ohio Edison that you have in mind
5	that caused them to go out of business?
6	A They apparently clearly were finding it
7	increasingly difficult to produce power and sell it at
8	rates that would be comparable with Ohio Edison's rates
9	and still stay in the black.
10	Q Do you know when Norwalk was acquired by Ohio
11	Edison?
12	A I did know. I don't have the date in mind.
13	Not terribly long ago.
14	Q And what rates are you referring to that you
15	compared with Norwalk and Chio Edison in order to draw
16	the conclusion that you just drew?
17	A The comparisons could be deduced from the
18	consultant's reports which I saw, which indicated the
19	revenues received at Norwalk's existing rates and what
20	the corresponding revenues would be for the Ohio Edison
21	rates.
22	Q What report is it that you saw, specifically?
23	A I don't remember the either the name of
24	the consulting firm or the name of the report.
25	Q Who showed you that report?

And the state of t

	6030
1	A Attorneys for the Dapariment of Justica.
2	Q When did that occur?
3	A Three months or so ago, I suppose.
4	Ω And it is your testimony that on the basis of
5	the revenue figures in that report that you concluded
б	there was a price squeeze situation regarding Norwalk
7	which resulted in Norwalk being acquired by Ohic Edison?
8	MR. CHARNO: I object to that question as a mis-
9	characterization.
10	MR. REYNOLDS: I'm asking if that is
11	MR. CHARNO: The witness did not
12	MR. REYNOLDS: I'm asking the witness if that
13	is the basis for his conclusion.
14	" MR. CHARNO: That is not what you asked.
15	CHAIRMAN RIGLER: Let me hear the question.
16	(Whereupon, the reporter read the
17	pending question, as requested.)
18	CHAIRMAN RIGLER: You can answer that yes or no.
19	THE WITNESS: I'm not sure I can answer it yes
20	or no.
21	CHAIRMAN RIGLER: Re acked if that was your
22	testimony.
23	THE WITNESS: Then the answer is no.
24	BY MR. REYNOLDS:
25	Q Am I correct that the report that the Department
3	

ar3

	6031
1	showed you regarding Norwalk is the sole basis on which
2	you formed your conclusion that Norwalk was forced out
3	of business as a result of a price squeeze?
4	MR. CHARNO: Objection. I don't believe that
5	is the conclusion the witness testified to. It is a
6	mischaracterization.
7	MR. REYNOLDS: I'm asking if that is his testimony.
8	MR. CHARNO: No, you're not. You're asking if
Ð	that is the basis for the conclusion he reached, and you
10	misstated the conclusion.
11	(Whereupon, the reporter read from
12	the record, as requested.)
13	MR. CHARNO: I repeat my objection.
14	CHAIRMAN RIGLER: I will sustain that.
15	BY MR. REYNOLDS:
16	Q Did you compare any rate schedules with regard
17	to the strike that and let me ask it this way:
18	Did you compare the rate schedules for Ohio
19	Edison's wholesale customers and industrial customers
20	for the period preceding and up to the time that
21	Norwalk was purchased by Ohio Edison?
22	A I can only answer that if someone will tell me
23	the date when it was acquired.
24	Q Did you look at any rate schedules other than
25	the rate schedules that have been introduced as exhibits

ar4

ar5					6032
	1 to your	by the Dep	artment of Jus	stice and red	
	2 the ones	that we rate	rred to earlis	u:?

1 Which ones? 0. 2 Well, it so happened that a few years earlier, I Δ. 3 was asked to conduct a rate seminar for a group of S. municipalities in Ohio, Michigan, Indiana, and among those --among the participants were some systems served by Ohio 5 6 Edison. They introduced me at that time to -- that was the first time I was introduced to the Ohio Edison 3 industrial rate schedules, and the question came up in the 9 10 context of whather these were not unusually and unduly complicated rate schedules. They ware. 11 Therefore, the matter stuck in my mind. When 12 I was involved in this, I recalled that, And I found that 13 I had kept the National Electric Rate Book for the period 14 that was -- National Electric Rate Book that was current 15 at the time of that discussion. 16 So I looked up those rates to see whether the 17 basic form had changed any, and ossentially, what had been 18 happening to the level of it. :9 And those are the other rates to which I refer of 20 Ohio Edison. 21 What was the time period of those rates? Q. 22 è. As I recall, it was - now, it was the late 60s. 23 And did you look at the wholesale rates at 0. 24 that time also? 25

,	A No, I didn't have those available to me. I looked
2	at them at the time, but I didn't have them in my files
3	and didn't have them available when I looked it back up.
4	Q Do you know now or do you recall now, whether
5	it was your judgment that a price squeeze existed at that
6	tiem?
,	A I wasn't thinking of it, particularly, in those
а	terms. That is not primarily the terms in which I'm
9	thinking of it now. But I do recall that the rates to the
10	municipalities at that time appeared so be unduly high
11	in relation to the industrial rates.
12	C I thought you said you didn't look at the
13	wholesale rate schedules at that bine?
14	A 1'm sorry, if I didn't make it clear.
15	I did look at them at the time.
16	I was not able to refresh my memory about them
17	at the time I look back in my files now. While I kept the
18	Nati al Electric Rate Book, that is the sort of thing that
19	has reference value for various purposes. I had not kept the
20	wholesale rate schedule. CHAIRMAN RIGLER: Mr. Reynolds, let me ask you
21	a question. Is it your thesis in this line of questioning
22	that if a municipal can obtain an industrial
23	customer and make a profit on that customer, then the
24	municipal cannot be the victim of a price squasse?
25	mana capita dumine na ano na casa da a pasta da an
1	

Dw2

	6036
1	MR. REYNOLDS: Of course. Yes, siz.
2	Am I to understand from the question of the
3	Chairman that the Chairman has a different view?
4	CHAIRMAN RIGLER: You are to understand that the
5	Chairman will ask the guestions. I'm probing to find
6	out what your concept of the antitrust laws in an inconsistant
7	situation might be.
3	Would it be your position that any degree of
9	profitability would eliminate the possibility of finding
10	price squeeze contributed to a monopoly situation?
11	MR. REYNOLDS: Could we dismiss the Witness?
12	CHAIHMAN RIGLER: Yes.
13	(The Witness was temporarily
14	excused.)
13	CHAIRMAN RIGLER: Lot me restate this.
16	Would is be your contention, as a general
17	matter now and without reference to any particular
18	Applicant company, that if a monopolist allous its
19	customers to make a small profit on resale, that the
20	monopolist thereby cannot be a monopolist?
21	MR. REYNOLDS: The last part of that is,
22	therefore, a monopolist cannot be a monopoly?
23	CHAIRMAN RIGLER: Would not be engaged in
24	anticompetitive acts or could not be found to be engaging
25	in anticompetitive acts.

----

bw3

1	MR. REYNOLDS: Well, certainly, since the
2	rates are set by regulatory authority, I would have
3	no problem saying, absolutely, yes, to that.
4	CHAIRMAN RIGLER: Someof your questions to the
5	Witness were premises on the municipality selling to its
6	industrial customer at a competitive rate or
7	competitive level. Is that the phrase you used?
8	MR. REYNOLDS: At a competitive price.
9	CHAIRMAN RIGLEF: Suppose the price could
10	be more competitive. Would that be a factor in assessing
11	whether there could be a situation inconsistent with the
12	antitrust laws?
13	MR. REYNOLDS: You say "suppose" the
14	municipal customers

917		5038
arl	:	CHAIRMAN RIGLER: Suppose the municipality
	2	could buy at a rate that would allow it to offer at an even
	3	more competitive price to the industrial customer?
	4	MR. REYNOLDS: The problem I'm having is that
	5	the prices are set on the basis of cost of service by the
	6	regulatory agencies. When you say a more competitive price,
	7	I don't understand what you mean.
	8	CHAIRMAN RIGLER: We have been in this area for
	9	over an hour now. The witness has tostified if the
	10	municipalities had an industrial rate that thay would
	11	have a greater margin of profit.
	12	It seems to me logical that they could then go
	13	to their industrial customers and perhaps negotiate with
	14	them for an even lower rate and introduce a new element
	15	of competition so that the investor-owned utilities
	16	might consider whether they wanted to lower their rate
	17	schedule to compete for those industrial customers.
	18	There would be a brand new element of competition.
	19	MR. REYNOLDS: Are you suggesting isolated lowering
	20	of rates? Rates are uniform. By regulation they have
	21	to be unfirom rates unless we manipulate rates and then
	22	you discriminate against different customers and you run
	23	into another antitrust problem.
	24	CHAIRMAN RIGLER: You might have to lover the
	25	rate schedule as a whole, then, would you not, in order to

-

States and the second s

arl

<ol> <li>introduce the new element of competition?</li> <li>MR. REYNOLDS: And that would depend on the</li> <li>cost of service, which is what the whole regulatory</li> <li>scheme is about. Otherwise you then run into discrimina-</li> </ol>	L.,

4 scheme is about. Otherwise you then run into discrimina-	1,
	1,
	1,
5 tion against other classes of customers, like a residentia	
6 let's say.	
7 CHAIRMAN RIGLER: All right. Let's recall the	
8 witness.	
9 MR. REYNOLDS: Mr. Chairman, I think the witnes	5
10 has already stated that it would be inappropriate to lower	
11 the rate of a wholesale customer simply to make him	
12 competitive for the industrial load where cost of service	
13 is reflected in the rate.	
14 That was his testimony.	
15 MR. CHARNO: That is not quite his testimony.	
16 You are close.	
17 (Whereupon, the witness resumed the stand.)	
13 MR. REYNOLDS: I would like to request from	
19 the Department of Justice a copy of the report that it	
20 showed the witness which the witness has indicated at leas	:
21 had some bearing on his determination that there was a	
22 price squeeze situation in connection with Norwalk.	
23 MR. CHARNO: I can say I haven't the slightest	
24 idea what the witness was referring to, but I can guarante	
25 that it was produced on discovery by the Applicant. The	

	6040
1	material that the witness was shown was that produced
2	on discovery by the Applicants; it would be more readily
3	available to Ohio Edison than us, probably.
4	MR. REYNOLDS: If the Department will
5	designate which document it was that was produced on
6	discovery, but I would like to have the identity of the
7	document that apparently was produced on discovery that
8	Mr. Kampmoier was referring to.
9	MR. CHARNO: If Mr. Berger is sure he has no
10	idea what that document is and can't ascertain it
11	MR. STEVEN BERGER: I don't. I wasn't privy to
12	your conversations with the witness.
13	MR. CHARMO: There is only one such document.
14	Let's proceed on that basis.
15	BY MR. REYNOLDS: Is that the study you are talk-
16	ing about? The only one I know of is the one that was
17	marked
18	MR. STEVEN BERGER: No.
19	MR. REYNOLDS: I don't know which study it is.
20	MR. CHARNO: We will attompt to establish
21	which study it is and inform the Applicants.
22	BY MR. REYNOLDS:
23	Q Mr. Kampmeier, do you know of any industrial
24	customer that Norwalk desired to compete for, but was unable
25	to do so because of the rates charged to Norwalk by Ohio

ar3

-----

	6041
ar4	
1	Edison?
2	A I don't have any such customer in mind, no.
3	Q Let me ask you this:
4	Mr. Kampmeier, can you tell us at what
5	period of time Norwalk was a wholesale customer of Ohio
6	Edison, if ever?
7	A No, I'm not sure I can say that. Norvalk was
8	basically a generating system for an extended period, and
9	was looking for alternatives and the question of
10	wholesale power supply as an alternative was one of the
11	questions that was examined, at least to some degree.
12	I don't recall whether it was implemented for any length
13	of time. I don't recall relative the details on the
14	relative alternatives at this stage.
15	Q Wouldn't that have a bearing on whether or not
16	a price squeeze situation could possibly have existed
17	with regard to the City of Norwalk?
18	A It may have a bearing, I think. The key
19	question there would have been whether the wholesale
20	service was available on term, which would have allowed
21	Norwalk to continue to be competitive, even though
22	apparently it could not be as a generating system.
23	Q Is it your testimony that a price squeeze could
24	exist even if Norwalk were not a wholesale customer?
25	A If it had any desire to be a wholesale customer,

-----

if there was any opportunity for it to be, but the terms on which it could be would have hasmered it in its ability to compete and I would say yes, you would have further evidence -- which is why I referred to this whole business of Norwalk -- further evidence of price squeeze conditions.

5042

0 Do you have in mind any other specific examples of municipalities in the CCCT area which were desirous of competing for industrial customers, but were unable to because of the rates that that municipality was being charged by the wholesale supplier?

A Yes. I looked at some others. Hy recollections are even less precise about the others at this point than about Norwalk. Therefore, I'm sure I could not undertake to talk specifics without stretching my memory past the breaking point.

Well, I wouldn't want to do that, Mr. Kaupmeior. 0 A No.

Mr. Kampmeier, isn't it true that the Q 19 cost of new generation and transmission capacity that is 20 installed today would exceed the average cost of all genera-21 tion and transmission capacity already in place on the 22 Ohio system or on the -- on the Ohio Edison system, or 23 on the system of any other ChPCO member? 24

25

I think that is almost certainly true. A

18

7

8

9

10

11

12

13

14

15

16

17

1	Q And is it not also true that rates are established
2	on the basis of average imbedded costs?
3	A By and large, yes.
4	Q And if rates are established on the basis of
5	average imbedded costs and the costs of new generation
6	and transmission capacity exceeds average imbedded costs,
7	is it not true that the addition of new customers, industrial
3	or otherwise, requiring additional generation and
9	transmission capacity, would involve Ohio Edison or any of
10	the other Applicants in providing service to such customers
11	at a rate which reflects costs below the cost of the
12	additional capacity needed to provide the service?
13	MR. CHARNO: Could I have that one back,
14	please?
15	(Whereupon, the reporter read the
16	pending question, as requested.)
17	MR. CHARNO: I object to that unless the
18	witness understood it. If he feels he can answer it,
19	I won't object to it. I don't understand it, myself.
20	THE WITNESS: Well, I think I understand the
21	purport of it. I could answer it, I think, only this way,
22	that it is quite possible that this would be that
23	would be the way it would work, but not necessarily.
24	BY MR. REYNOLDS:
25	Q Why did you say it would not necessarily follow?

ars

1	A Because it depends on the particular cárcua-
2	stances. If one picked a nice favorable case like the one
з	you were giving ma a while ago of a 20 percent diversity
4	between the industrial load and the peak load, then that
5	would start you off with a 20 percent differential. There
6	is presumably some additional differential in the
7	industrial rates for more typical cases than that.
8	It would be a question of whother the costs, the
S	additional costs that were being faced ware up so much as
10	to outweigh those sort of differentials.
11	Q Let me ask you this:
12	How much above average imbadded costs do you
13	think incremental costs for new capacity is at the present
14	time for the CAPCO companies?
15	A You are talking solely about investment now
16	and no other elements of cost; is that right?
17	Q All right, for generation?
18	A They are probably up 50 percent. How much more,
19	I don't know.
20	Q If the cost of new capacity exceeds the
21	average imbedded cost of the existing capacity, would it
22	not be the case that the revenues received by Ohio Edison
23	or the other CAPCO members would not be sufficient to cover
24	the cost of additional capacity requirements on every
25	addition to load requiring the installation of new

ar7

ar3		6045	
	,	capacity?	
	2	A You mean unless they had a surge in rate increases	
	3	Q That's right.	
C	4	A I think that is true. I hope it is true.	
	5	Otherwose, I don't know why they would have had their	-
	6	surge in rate increases.

S19 1	Q Let's assume that a wholesale customer of Ohio
'wl 2	Edison adds an industrial customer. Would it not be true
3	that the rate to that wholevale customer charged by
4	Ohio Edison for the resulting additional load of the
5	wholesale customer would be based on average embedded
6	costs?
7	A Largely.
6	Q Isn't that the way the FPC establishes rates?
9	A Largely, yes.
10	Q Now, where the cost of new capacity enceeds
11	average embedded costs, if the wholesals customizs adds
12	an industrial load which results in increasing its
13	cpacity purchases from Ohio Edison, thereby requiring Ohio
14	Edison to install additional generating capacity, would
15	not Ohio Edison be selling that additional capacity to the
16	wholesale custoemr at a rate based on average embedded
17	costs which would be below the incremental cost of installing
18	the additional generating capacity required?
19	A May I suggest added at the end of your question,
20	unless there were a series of increases in the wholesale
21	rate.
22	Q All right.
23	A Without such increases, the Enswer would be,
24	yes, they would be.
25	With the increases, I presume that point is taken

bw2

ES19

1

care of.

2	Q If Ohio Edison sells power to its wholesale
З	customer at a rate based on average embedded costs, which
4	the wholesale customer, in turn, sells to its industrial
5	retail customer, is it not then true that Chic Edison,
õ	assuming it had to install additional capacity a:
7	a cost in excess of average embedded costs, in order to
8	p-ovide that service, would receive revenues below its
9	incremental costs, and thereby suffer a price squeeze,
10	as the result of the sale?
11	MR. CHARNO: Could we run that by cnce.
12	slowly?
13	(The reporter read the pending question.)
14	(the pending question.)

20	
21	
22	
23	
24	
25	

820		5048
arl	1	THE WITNESS: No, it would not theraby
	2	suffer a price squeeze as a result of the sale.
	3	BY MR. REYNOLDS:
	4	Q Why is that?
	5	
	6	A Because the same cost dirounstances would apply
	7	to Ohio Edison if it were serving the industry, directly,
	8	as if they were selling the power to the municipality for
		serving the industry. And the problem of upward trend in
	9	costs is being dealt with by a series of rate increases.
	10	Presumably that series of rate increases is taking place
	11	both in the retail rates of Ohio Edison and in the wholesale
	12	rates of Chio Edison and incidentally also in the retail
	13	rates of the municipalities.
	14	The only way in which it would be a financial
	15	detriment to Ohio Edison would be if it were being allowed
	16	to increase its rates to industries without being allowed
	17	to increase its rates to its wholesale curtomers.
	18	Q But until it gets the rate increase, Ohio
	19	Edison is going to suffer the same, whether it salls
	20	directly to the industrial or it sells indirectly through a
	21	wholesale customer providing the service to the industrial?
	22	A Well, the impact of cost increases is the same.
	23	It probably will not suffer the same overall financial
	24	effect because it will have somewhat higher margins in one
	25	rate than the other. Under the circumstances we have been

#20

-----

ar2	6049
1	looking at where the rates to the wholesale customers
2	are higher than the rates to industry, then presumably Ohio
3	Edison would be better off financially if it sold the
4	power to the wholesale customer than if it sold it directly
5	to the industry.
6	CHAIRMAN RIGLER: Let's take a short five-
7	minute break.
8	(Recess.)
9	BY MR. REYNOLDS:
10	Q Mr. Kampmeier, you have indicated, I believe,
11	that an increase in Ohio Edison's rates would be a way
12	in which to cure the revenue losses that Ohio Edison
13	would experience as a result of the rising costs that we
14	have been discussing.
15	Would it not therefore be more accurate if one
16	is to assess a price squeeze to examine rate schedules
17	over a period of time rather than to pick one isolated
18	rate schedule at a single point in time and compare that?
19	A That would be somewhat preferable, as I tried
20	to indicate vesterday. More extensive study over a
21	period of time would produce some additional information,
22	right.
23	Q Do you know whether or not it is the
24	case that the City of Bowling Green is paying a rate
25	determined not by the cost of serving Bowling Green, but

ar	3	6050
	1	by the average cost of serving all municipal customers
	2	of Toledo Edison, including Bowling Green?
	3	A May I have that question read, please?
	4	(Whereupon, the reporter read the
	5	pending question, as requested.)
	6	MR. CHARNO: Can I incuire as to whether
	7	that is the time the witness testified concerning or
	В	whether it is at the present time?
	9	MR. REYNOLDS: At the time he wrote his
	10	testimony.
	1:	MR. CHARMO: I'm sorry, you are asking as of
	12	September of last year whether that was the case. Or in 1973,
	13	as being the period he testified concerning.
	14	BY MR. REYNOLDS:
	15	Q Let's take it by the times or either time.
	16	A Well, I think the answer either time is no, I
	17	don't know.
20	13	
	19	
	20	
	21	
	22	
	23	
	24	
	25

end

S21 1 Do you know whether the FPC sets rates on the a 'sw1 2 basis of average costs of serving all municipal customers 3 of Toledo Edison? 4 Normally, the normal practice of the FPC, as A

6051

5 I said before, is not so much to set the rate, as to approve 6 rates requested, but those rates normally are geared to 7 looking at all the customers in a class and taking account 13 in the form of the rate in effect of size of customer on how the rate should vary with size or other characterizations. G 10 Assume that the rates are based on average costs a and Bowling Green's particular costs are belwo the 11 12 average, would you advocate reducing the rates to the City 13 of Bowling Green and raising the rates to the remaining 14 municipal customers for whome the cost of service is higher rhan averaging out the cost and having a uniform rate? 15 MR. CHARNO: For clarification of the record, 16 do you mean cost of serving Bowling Green or Bowling Green's 17 cost of service? 18 BY MR. REYNOLDS : 19 The cost of serving Bowling Green, a 20 CHAIRMAN RIGLER: Could you give us a load-in 21 on the direct, as to where we are? It might be helpful to 22

the Board. 23

MR, REYNOLDS: It is question 65 on page 35, 24 Mr. Chairman. 25

2	THE WITNESS: The rate schedule should not be,
3	in any usual situation, a singling out of a particular
a	customer in a class to be given a different rate schedule.
5	If a customer is of sufficiently different
6	size, so that this affects level of costs, then either the
7	rate schedule should be so structured as to take that into
8	account, which would be the preferable approach, or there
9	should be a second rate schedule for the larger customers.
10	BY MR. REYNOLDS:
11	g If Bowling Green were to provide less revenue,
12	wouldn't the other municipalities havevec provide more
13	revenue, in order to keep revenues constant?
14	MR. CHARNO: Is this wholesale revalues, or
15	overall revenues?
16	BY MR. REYNOLDS:
17	a Wholesale revenues.
19	A If the sole objective is to keep wholesale
19	revenues constant, yes, certainly, that would have to be
20	done.
21	
22	determined what the revenues should be, wouldn't that
23	
24	inidcate that the revenue be kept constant?
25	A. I don't think that normally the Federal Power
40	Commission narrows down the question of required revenues

\$

----

	5053
1	to that fine a point, frankly.
2	Q What is the basis for that conclusion?
3	A The review of the findings of the Pederal
4	Power Commission in Tquite a lot of different cases.
5	CHAIRMAN RIGLER: Mr. Reynolds, I'm a little
6	puzzled by this myself.
7	Are you saying that the Federal Power
8	Commission determines an overall level of revenues to be
9	obtained by Toledo Edison for serving municipalities
10	in its area?
11	MR. REYNOLDS: That is right, for a class of
12	customers.
13	CHAIRMAN RIGLER: If customers are subtracted
14	from that total, in order to maintain that level of
15	revenues, other customers must thereby pay more; is that
16	right?
17	MR. REYNOLDS: If the same facilities are
18	used, then the answer would be, yes, depending on cost of
19	service.
20	CHAIRMAN RIGLER: What do you mean by, if the same
21	facilities are used?
	I'm not trying to question you now. I'm
22	trying to get a fix on where you are going and what your
23	basic premise is.
24	
25	So, if you can fill me in a little bit, it would

bw3

A NAME AND ADDRESS OF

lan	he!	1.25	1
be	340.	to be an	

MR. REYNOLDS: If you build a generation and transmission facility to surve ten nunicipalities, and one of those municipalities leaves, then the costs are going to be picked up by the nine customers of that facility -- nine remaining customers of those facilities that remain.

You still have the same cost, and you have to --somebody has to pick up that cost and that cost would be picked up in your hypothetical by the remaining customers.

ES21

bw4

\$22		6055
arl	1	CHAIRMAN RIGLER: That was the hypothetical
	2	you put to the witness two or three questions ago.
	3	MR. REYNOLDS: No, no. I asked the witness
	4	about the question of reducing the rate to one of the
	5	customers which has a cost below the average cost for
	6	the class, whether that would necessitate raising the rates
	7	for the other customers in the class to maintain constant
	8	revenues.
	9	CHAIRMAN RIGLER: Is it a premise in this
	10	line of questioning that there is a facility the purpose
	11	of which is to serve this class of customers?
	12	MR. REYNOLDS: There are a group of facilities.
	13	I was trying to give you a conceptual example to answer
	14	your question. There are a group of facilities in order
	15	to serve.
	16	CHAIRMAN RIGLER: In fact, when Toledo Edison
	17	builds a generating plant, it doesn't assign a portion
	18	of that plant to municipal customers. It looks at them
	19	as part of the overall load.
	20	MR. REYNOLDS: But the Federal Power Commission
	21	will assign them a particular part to determine the rate.
	22	CHAIRMAN RIGLER: On a plant-by-plant basis?
	23	MR. REYNOLDS: On the basis of total facilities.
	24	CHAIRMAN RIGLER: They look at the system as an
	25	aggregate, the aggregate generation within the system.
	11	

ar2	6056
1	MR. REYNOLDS: Right, and that is the same thing
2	the PUCO does at the retail level.
3	CHAIRMAN RIGLER: All right, now, we are
4	tracking.
5	BY MR. REYNOLDS:
6	Q Have you made any studies, Hr. Kampucier, to
7	determine that the appropriate relationships would be
ε	between the rate of service to the City of Bowling
9	Green and to industries with contract demands larger than
10	30,000 kva?
11	A No, because I didn't think that was relevant to
12	what I was testifying to.
13	Q Are you aware, Mr. Kempmeier, that all of
14	Bowling Green's rates have been lower than the Toledo
15	Edison rates for the past few years?
16	MR. CHARNO: Objection. Unclear.
17	Are we talking about retail or wholesele?
18	BY MR. REYNOLDS:
19	Q Are you aware that all of Bowling Green's
20	rates, for comparable classes of customers, have been
21	lower than the Toledo Edison's rates for those similar
22	classes of customers over the past few years?
23	A I was aware that Bowling Green had relatively low
24	retail rates. I had not made that comparison per se, no.
25	Q Do you know if Toledo Edison serves Bowling

	6057
1	Green at multiple delivery points?
2	A No, I don't know that offhand.
3	Q Do you know if Toledo Edison serves industrial
4	customers with over 30,000 kva demand at more than one
5	delivery point?
6	A Normally the service would be at a single delivery
7	point. There may be exceptions.
8	Q Wouldn't the number of delivery points have an
9	effect on the cost of service?
10	A Yes. It would also have an effect on the power
11	bill.
12	Q On page 36, Mr. Kampmeler, you indicate that most
13	large electric systems have their highest loads on summer
14	afternoons within the hours of heavy industrial demands.
15	A Yes.
16	Q Have you made any study of the loads of the
17	CAPCO member systems? Can you tell us when their highest
18	loads occur?
19	A Yes, in fact, I think I answer that in the middle
20	of that page in answer to question 67.
21	Q Were you aware that this past year Ohio Edison
22	had a winter peak rather than a summer peak?
23	A No, but it doesn't particularly surprise me.
24	Q What would that indicate to you about the stability
25	of seasonal load diversity?

The second second

ar3

	6058
1	A It would indicate that the difference is summer
2	and winter peaks on the Ohio Edison system is not so great
3	but that if you have an economic cycle which has an
4	impact difference in one season than the other, or if
5	you have abnormal summer temperatures or abnormal winter
e	temperatures, which you may get some shift in that relation-
7	ship.
8	The projection Ohio Edison made on its load was
9	that it would have a summer peak. The planning was done
10	on the assumption of a summer peak.
11	I think I made the comment earlier that nothing
12	is certain in this business, and you have to look at
13	probabilities.
14	That is the sort of thing I was talking about.

	\$23	
	1	Q Let me read you a statement from the 1970 National
JWl	2	Power Survey, Part II, Roman Numeral 17-2, Roman Numeral
	3	IX, and ask you if you agree with this statement.
	4	"An analysis of load characterizations on a
	5	daily, monthly and annual basis, shows minimal diversity
	6	amont the principal power suppliers providing approximately
	7	95 percent of all energy requirements in the region."
	8	A Which region?
	9	Q This is the East ECAR region.
	10	MR. CHARNO: Could we ascertain whether you are
	11	going to be handing out copies today or whether that was
	12	yesterday, and if you are not handing out copies, I would
	13	like to examine it before the Witness answers the question.
	14	And I would like for him to see it in context.
	15	BY MR. REYNOLDS:
	16	Q "Little if any change in this regard is
	17	anticipated in the future. At present both the summer and
	18	winter coincident peak demands in the region are very nearly
	19	equal. Future seasonal trends in peak demand are difficult
	20	to determine in view of the composition and characterizations
	21	ofthe regioon.
	22	"There is some evidence, however, that the
	23	historical winter peaking characterization may be tending
	24	toward a summer peaking situation."
	25	Before you answer, if you want to look at that

----

9.02	
1	paragraph or Mr. Charno wants to look at it, that is fine.
2	I guess Mr. Lessy wants to look at it.
3	CHAIRMAN RIGLER: We are losing five minutes
4	on this.
5	I want to make it clear, in the Suture, if you
6	are going to read a statement to the Witness, have copies
7	available so that we don't run into these quagmires.
8	MR. REYNOLDS: All right.
S	BY MR. REYNOLDS:
10	Q The question is, do you agree with the
11	statement?
12	A I find nothing in it with which to
13	disagree.
14	Asked whether I would agree, I suppose could
15	imply have I verified all of the facts, and I haven't
16	done that, but I have found nothing in it to disagree
17	with , and nothing in it that gives me trouble.
18	Q If Ohio Edison had a winter peak this past year,
19	is it not true that a winter peak occurring after 5 p.m.,
20	would have occurred when the industrial loadsno longer
21	wre a significant factor?
22	A I expanded the assumption in the middle of the
23	question. I said if it had a winter peak and then if it
24	had a 6 o'clock peak.
25	Q Let's assume a 5 o'clock peak.

bw2

-----

1	A If it had a 6 c'clock peak, then would that be
2	outside the normal industrial hours of pask industrial
3	loads. If that is it, yes.
4	Q. It would occur when the industrial loads were
5	not a particularly significant factor?
5	A In that particular month, right.
7	Of course, it is still a significant factor, but
8	it would not be as controlling a factor, not guite as
9	significant a factor as when the peak is earlier in the
10	afternoon,
11	g. What would be the significant factor in that
12	situation.
13	A With regard to the industrial load?
14	Q. With regard to the pask occurring after
15	six d'clock in the winter what would be significant factor?
16	MR. HJEIMFELT: Objection. There is not
17	testimony that there is a single significant factor.
18	CHAIRMAN RIGLER: Sustained.
19	BY MR. REYNOLDS:
20	Q Would there be a single significant factor?
21	A. I don't think so.
22	g What would cause the peak to occur after
23	six o'clock in the wintertime as opposed to, let's say, a
24	midday peak in the summertime?
25	

bw3

		f 52
bw4	1	A. Probably the greater lighting load by that hour
	2	in the wintertime, street lighting, industrial lighting,
	3	commercial lighting, residential lighting.
	4	Q That would include industrial lighting after
	5	6 p.m., in the winter?
	6	A In all probability.

#24	6063
rl 1	Q Do you know if the do you know when the
2	municipalities in the CAPCO region paak in the wintertime?
3	A Are you asking me whether case by case I know
4	at what hour of the day their monthly peaks in the winter-
5	time occur, and if so the answer is no.
6	Q Just as a group, when would the annual peak of
7	the municipalities occur in the wintertime, in the CAPCO
8	area?
9	A You contradicted yourself. You mean the annual
10	or winter peak?
11	Q The winter peak. I think I said that.
12	A The winter peak normally would occur in
13	December of January, maybe February.
14	Q What time of day, before or after 6:00 o'clock?
15	A Probably after 6:00 o'clock.
16	Q Do you know whether the
17	A I do not know that for a fact. I'm assuming
18	you asked for my judgment and opinion. That is what
19	I'm giving you. Unfortunately, the data from the
20	municipalities in most cases does not include hourly data.
21	One can determine something about the months in which
22	peaks occur, but usually not the hour in which they occur.
23	Q What is the basis for your answer to question 68,
24	then?
25	A You note that the caly example in the answer in

a

	606-4
1	which I referred to hour of day was the Cleveland Municipal.
2	There I had information as to the hour of day. The others I
3	was referring to time of the year.
4	Had I known more than I did then about hours of
5	the day, I could have made even more of a point of this
6	than I did. All I knewwas that many of the systems had had
7	their highest demand for the year in months other than
8	the months of the CAPCO companies' peaks, and I did not know
ß	how much further diversity there would be if I had been
10	able to take account of hourly diversity as well as monthly
11	diversity.
12	Q Where did you get the information that the
13	municipalities buying power from the CAPCO companies had
14	their highest demand at the same time as those companies?
15	MR. CHARNO: Could I have that back, please?
16	(Whereupon, the reporter read the
17	pending question, as requested.)
18	MR. CHARNO: I think that is a direct contra-
19	diction to what the witness testified, but I'm not sure.
20	BY MR. REYNOLDS:
21	Q Do not have their highest demands at the same
22	time as the CAPCO companies?
23	A I said many do not. In the case of these
24	which I was able to say that about, those that I was able
25	to get information for, I got it from two or three

1 different sources. Some of it from reports that municipalities made to the Federal Power Commission in the 2 way of power system statement. Some from a study that 3 R. W. Beck & Associates made for a gourp of systems served 4 by Ohio Edison, and in certain cases from some of 5 the discovery material that was submitted with regard to 6 certain municipalities. In the aggregate, I was able to 7 determine that there was diversity for at least 15 8 different systems and the diversity typically was at least 9 8 or 10 percent, and probably was more except I didn't know 10 how much more because I did not have the data as to the 11 hour which the municipal's peak occurred, or rather to put 12 it the other way around, I did not have the information as 13 to what the municipalities' demand was at the time 14 when the CAPCO peaks occurred. 15

Q Is your statement on page 36 to the effect that some of the small distribution systems still have evening peaks based on the same source that you just recounted?

A Excuse me, let me take a moment to reread my testimony on this.

Q It is on the sixth line down, page 36. A That statement is intended to be a generally applicable statement across the country, for the majority of the country and I sought only to verify its appropriateness for this particular area sufficiently to be

ar3

16

17

18

19

20

21

22

23

24

25

ar4	6066
1	sure that I should not qualify the statement or eliminate
2	the statement because it would be misleading for this area.
3	Q Do you know whether the City of Cleveland also
4	has a summer peak that is higher than its winter peak?
5	A I'm reasonably sure it does, but I'm not
6	prepared at the moment to guarantee that.
7	Q As a general matter, Mr. Kampmeler, at what
8	time of day do you get a residential peak?
9	A Most commonly around 7:00 o'clock in the
10	evening, but if you happen to have considerable electric
11	heating, then you will probably have your peak in the
12	wintertime around 8:00 o'clock in the morning.
13	Q And at what time generally do you get your
14	industrial peak?
15	A Usually you have a twin peak, morning and
16	afternoon, with the morning peak occurring around 11:00
17	or 12:00, and the afternoon peak around 2:00 or 3:00, and
18	usually those are very nearly the same.
19	Q Generally at what time of day would the
20	peak occur for, let's say, Ohio Edison?
21	A Around 2:00 o'clock in the afternoon.
end 24 22	
23	
24	
25	
•	

.

S26	1	Q What about the other CAPCO compenses, the same
bwl	2	thing?
	3	A In 1973, for example, CEI was between
	4	2 and 3 p.m. Duquasme Light's between 1 and 2 p.m.
	5	Ohio Edison between 12 and 1 p.m.
	G	Pennsylvania Power between 2 and 4 p.m., and
	7	toledo Edison between 1 and 2 p.m.
* .	8	Q. When, as a general matter, would a municipal
	9	system peak occur?
	10	A You can't generalize guite so wall about the
	11	municipals. There is more variation among them.
	12	As far as the CAPCO are is concerned, I have
	13	already indicated that I was not able to find the data on
	14	hour-of-day peak formore than a very few of the systems.
	15	I wouldn't want to try to answer that with
	16	regard to the systems in this area. Any more than I have
	17	already sought to do.
	18	I wish I had the data. It would have showa,
	19	I'm sure, significant additional diversity.
	20	What I'm uncertain of is how much more,
	21	because I couldn't readily find the data.
	22	MR. REYNOLDS: I move to strike the last part
	23	of that response.
	24	CHAIRMAN RIGLER: We will strike the part that
	25	followed the phrase "I'm sure."

----

.	MR. REYNOL'S: Right.
1	BY MR. PJ YNOLDS:
2	Q If a municipal system were to add a sizable
3	industrial customer might not alter its system paak?
	A Yes, it might.
5	MR. REYNOLDS: Can we break here for lunch?
7	It may be that we can trim down the cross-examination and
8	finish up shortly after lunch.
9	CHAIRMAN RIGLER: All right.
10	You are still on target, I take it, then?
11	MR. REYNOLDS: I believe co.
12	CHAIRMAN RIGLEL: Do you want an hour?
13	MR. REYNOLDS: Yes, please.
14	CHAIRMAN RIGLER: Mr. Hjelmfelt, will you be
15	with us this afterncon?
16	MR. HJELMFELT: Yes, I will,
17	CHAIRMAN RIGLER: I may want to get you involved
18	in scheduling discussions.
19	(Whereupon at 1:00 p.m., the hearing was
20	recessed, to reconvene at 2:00 p.m., this same day.)

S27	AFTERNCON SESSION (2 p.m.)
bwl 2	
3	ROLAND A. KAMPMEIER
4	resumed the stand and, having been previously daly sworn,
5	
6	CROSS-EXAMINATION (Cont'd)
7	BY MR. REYNOLDS:
8	Q Mr. Kampmeier, on page 39, you state that it
9	would be in the public interest for a large system to
10	
11	the basis for your judgment that it would be in the public
12	interest that that ' result would be in the public
13	interest?
14	A The reasons why it would be in the public
15	interest?
15	Q I'm sorry, I can't hear you.
17	A. You are asking what are my reasons for saying
18	it will be in the public interest. Is that the question
19	or not?
20	Q I'm asking the basis for concluding that that
21	would be in the public interest.
22	A Well, my testimony is that it would be in the
22	public interest for the reasons just mentioned, which are
24	spelled out in the proceeding question.
25	CHAIRMAN FIGLER: Excuse me Aren't they spelled out
Sec. 1997 Sec. Part of the sec.	

6069

U

bw2		6070
242	1	in the answer to Question 76 itself?
	2	MR. REYNOLDS: Mr. Chairman, I'm trying to
	3	determine the basis for this Witness' testimony as to what
	4	is or is not in the public interest, with regard to this
	5	matter.
	6	CHAIRMAN RIGLER: Yes, I understand, I just
	7	think there is confusion on the record. I'm not trying
	9	to cut off the line,
	9	He indicated he answered that by reference to his
	10	previous question. It looks to me he answerad it by
	11	reference to the ongoing question.
	12	I'm trying to eliminate the confusion.
	13	THE WITNESS: Both would be right.
	14	CHAIRMAN RIGLER: If I throw you off, I
	15	apologize.
	16	MR. REYNOLDS: As I understand his answer
	17	indicates he had determined it to be in the public interest
	18	for reasons mentioned in the prior answer.
	19	CHAIRMAN RIGLER: That was my point of confusion.
	20	MR. RE NOLDS: I was asking the basis for his
	21	reaching that determination.
	22	
	23	
	24	
	25	

#28		0071
arl	1	THE WITNESS: To repeat, I testified it
	2	was for the reasons mentioned, which was in the preceding
	3	question.
	4	I then expand on some of these reasons to some
	5	degree in the rest of the answer to 75.
	6	BY MR. REYNOLDS:
	7	Q What are you basing that judgment on?
	8	A The proposition that deplication of facilities,
	9	for example, in a capital-intensive industry like this,
	10	unnecessary duplication is not in the public interest. This
	11	is one of the most basic premises in public utility law
	12	and ratemaking and regulation.
	13	Q Do you know that that issue is now presently
	14	being litigated before the FFC?
	15	A Yes. Questions like this need to be examined
	16	in more detail from time to time. I think that is a
	17	case in point. I don't think at all there is the basic
	18	premisa here.
	19	Q Do you know that the specific issue of whether
	20	wheeling is in the public interest is presently being
	21	litigated before the FPC?
	22	A That is what I understand. I'm not femiliar
	23	with that in detail.
	24	Q And how do you go about determining what is
	25	in the public interest, you personally?
	11	

-----

1 Well, sir, my duties in the last 15 years in A 2 particular, and for some period before that, have largely 3 involved advising people who were making policy decisions 4 for electric systems and I found it very necessary and 5 important that they try to gear those decisions to the 6 national public power policies as empressed in 7 legislation and executive orders, and so on. 8 Therefore, the question of what is and what is not in the public interast and what should an electric 9 10 utility do to recognize both the public interest and 11 its own more narrow interests is a question which has arisen innumerable times in the course of my work over 12 these years. 13 It is a cumulative experience derived from that 14 that I base my judgment on. 15 MR. REYNOLDS: I move to strike the entire 16 answer to 76 as being outside the expertice of this 17 witness. It is not a matter ha is in any position to 18 testify to. It goes on to speculate as to what the long-19

6072

term interests are of private utilities.

It talks about a boomerang effect on the basis of some speculative state action regarding eminent domain.

It then talks about, as I understand it, some legal conclusions that all parties have an obligation of some sort to hold costs down by coordinating power supply develop-

ar2

20

21

22

23

24

	6073
1	ment and operations, and I just think that it is a matter
2	that is entitled to so little weight that it should be
3	struck.
4	MR. CHARNO: Mr. Chairman, obviously I take
5	issue with that. The witness has set forth a number of
6	what I until this moment believed were generally recognized
7	public policies, for example, that duplicative unnocessary
8	duplicative transmission facilities should not be constructed.
9	A public utility has an obligation to serve on
10	fair and nondiscriminatory terms. Counsel mentioned that.
11	He set forth his basis for his answer.
12	CHAIRMAN RIGLER: Are we here to examine
13	public policies generally or policies which would maintain
14	a situation inconsistent with the antitrust laws?
15	MR. CHARNO: Fublic policies as they focus
16	upon the efficient practice of public utilities
17	has a great deal to do with anticompetitive action in the
18	public utility incustry. The portion of his testimony
19	on page 40 where he goes into albeit a general statement,
20	but a statement nonetheless of the options open to a
21	community, and I will quote:
22	"Some may elect to buy power, either at
23	wholesale or at retail, from the large supplier who owns
24	the transmission system. That will o ten be their
25	cheapest option. Some may elect to buy from other

A CONTRACTOR

	5074
1	appliers."
2	He sets forth the different bulk power
з	supply options that are open. I don't see that it is
4	beyond his competence. It seems to be the focal point of
5	his competence.
6	The judgmental statements, it seems to me, for
7	example, "Nor should it charge a discriminatory price
8	for transmission service," are in line with the generally
9	recognized public utility regulatory principles that
10	he sets forth at an earlier point in the same answer.
11	I think
12	CHAIRMAN RIGLER: Go ahead. Excuse me.
13	MR. CHARNO: To the extent that the
14	witness is indicating general industry practice or
15	approved industry practice and showing a deviation from it,
16	that is anticompetitive, I think this goes to the heart of
17	his testimony.
18	
19	
20	
21	
22	
23	
24	
25	

end 28

ar4

S29 (	CHAIRMAN RIGLER: He is not discussing and
v1 2	industry practice in this answer.
3	MR. REYNOLDS: Or any deviation.
4	MR. CHARNO: When he is setting forth options
5	and what would be in accord with general public utility
G	policies.
7	CHAIRMAN RIGLER: There, again, there is a gulf
3	between general policies and those policies, which
0	might reasonably be related to a situation inconsistent with
10	the antitrust laws.
11	I'm going to deny the motion, but at the same
12	time, I think we should take recognition of the .
13	rather severe limitations which the Board would put on any
14	weight to be given this testimony.
15	to the extent that the Witness is getting
16	into the area of general public policy relating to
17	wheeling, this would not be the appropriate agency to
18	consider or make such judgments.
19	To the extent that the Witness is tastifying
20	albeit with reference to a long career in the
21	power industry, what he considers desirable in a general
22	sense, we would disregard that testimony.
23	We would give it little, if any, weight.
21	Only in the most marginal sense does this answer
25	contribute to the resolution of any question relating to the

issues in controversy in this proceeding.

Although we deny the motion to strike, I think we have indicated that there will be rather strong lim itations on any weight the Board would give to it.

The reason that we don't deny it in toto is because there are parts of the answer which may touch tangentially on issues which are relevant to our consideration.

The point about the duplication of transmission facilities being one where there are economic costs associated with that duplication. On the other hand, we have had testimony to that effect from Witness Mozer, among others. I don think this particularly adds to the present state of the record.

BY MR. REYNOLDS:

A Hr. Kampmeier, on page 41, in answer to question 77, would you explain what you mean when you state that the small system is at the mercy of a monopolist?

I'm sorry, is largely at the mercy of a monopolist.

A. Yes.

If the small system, for the reasons that I have been discussing in answer to a number of your questions, is finding that it cannot remain financially viable with its own generation, then it has to look for power from

other sources and if the only system which it is connected 2 with and probably the only one which it can very easily 3 and inexpensively be connected with, is unable to provide 4 transmission service to permit this system to get power from 5 third parties, then it is left at the situation of having 6 to deal with this single system, whether it likes it or 7 not. 8 Would that be grue of all of the wholesale 0 9 customers of TVA? 10 I think so, if one ignores the nature of A 11 the relationship between TVA and the distributors. 12 What relationship is that that you are referring a 13 to? 14 Well, the relationship of rates and terms of A 15 service, and so on, being established by mutual agreeement 16 and pursuant to expressed Congressional policies. 17 In making this statement, did you take into account a 18 the jurisdiction of the Federal Power Commission over the 19 relationship --20 MR. CHARNO: In making which statement, Counsel? 21 MR, REYNOLDS: In making the statement that 22 the small system is largely at the mercy of the monopolist. 23 THE WITNESS: Yes, I think that is why the FPC has the jurisdiction it does, because these are monopolist. 24 25

bw3

	607B
i	& So they are regulated monopolists; is that
2	what you are saying?
3	2 Yes.
4	Q That is not the situation with regard to TVA?
10	A TVA is not regulated by the Federal Power
6	Commission, no.
7	Q Is it a regulated monopoly?
3	A. NO.
٩	Q Is it a monopoly?
10	A. Frankly, I don't knwo whether it is or not. I'm
11	not sure how the definitions would apply in a situation
12	like that.
13	Q. What is your understanding of what a menopoly
14	15?
15	A. In trying to put it in lay terms, I think a supplier
16	of a service or product which is in a position to control
17	the certain aspects of the situation more commonly for
18	the market or sale of that product or pervice.
19	Q And in your view that definition doesn't fit
20	TVA?
21	A I think the definition pretty well that
22	definition pretty well fits TVA.
23	I'm not sure tht I would want to
24	rest solely on that definition.
25	Now we are getting into questions of legal
	definition, that is totally beyond my competence.
1	

ES29

1

bw4

30	6079
ı ,	Q It is your term and I'm trying to understand
2	how you used it.
3	Whichever definition you want to pick is fine,
4	but I'm trying to understand what you meant by your
5	testimony.
6	A What I meant by my testimony is a situation
7	in which the small system has no voice in the torms at
8	which it can obtain power from the other system and has
9	no alternatives to turn to. I will stop there.
10	Q Does not the Federal Power Commission give them a
11	place to turn?
12	A No, not an alternative to turn to. The Federal
13	Power Commission gives them a place to air their
14	complaints if they have some.
15	Q Would you be able to make the same statement
16	if instead of using the word "monopolies," we used a
17	"large electric utility"?
18	A A large electric utility in the determination
19	of whose service policiies it had no voice, then I would
20	accept that.
21	Q If a large system, as you have indicated
22	earlier in your testimony, transmits to a smaller system
23	its economies of scale and economies of coordination by
24	virtue of regulated wholesale rates, what further
25	advantage is to be gained by that small system by a
li	

ą

ar

	6080
1	wheeling arrangement?
2	MR. CHARNO: Could I have the question back?
3	(Whereupon, the reporter read the
4	pending question, as requested.)
5	MR. CHARNO: Could you give the reference to
6	his earlier testimony?
7	MR. REXMOLDS: I don't have the specific page.
8	Do you quarrel with that?
9	MR. CHARNO: I'm not sure I can recall him testify-
10	ing to that. That is why I asked.
11	MR. REYNOLDS: Do you have any guarral with
12	my characterization of your carlier testimony?
13	TEE WITNESS: I better hear the question
14	again, thank you.
15	(Whereupon, the reporter normad the
16	pending question, as requested.)
17	THE WITNESS: In answer to your specific last
18	question, yes, I do object to that as being a characterisa-
19	tion of my testimony.
20	If you want to leave out the reference as to
21	as I testified before and leave the question the way
22	it is without that, I would be glad to answer it.
23	BY MR. REYNOLDS:
24	Q Okay, let's do that first.
25	A Ckay. There are a couple of reasons why it
1	

3	6091
1	would be better for the small system to have the
2	wheeling available to it.
3	One is the general proposition of freedom of
4	choice, which I have talked about several times before.
5	The small system should have an opportunity
6	to consider other sources of power which it might like better.
7	not just because of price differences, but because of
8	differences in length of commitment and for other reasons;
9	and then secondly, if we are talking about a system which
10	has any generation of its own, then the system has the
11	problem of how to coordinate that generation with other
12	sources of supply, how to dispose of a surplus from
13	that generation at times when its loads are low and its
14	equipment is all available.
15	A wheeling arrangement lets it on the one
15	hand have a way to dispose of its surplus and on the other
17	hand to obtain complementary or supplementary sources.
13	Again in each case, without having to be
19	restricted to a single other system.
20	MR. REYNOLDS: I move to strike that part of
21	his answer that follows the statement "if a system
22	provides its own generation" as being unresponsive to
23	the question.
24	MR. CHARNO: Mr. Chairman, I would disagree.
25	They did not indicate full or partial sales. They said
11	

buys power at wholesale, as I recall the question. Many 1 systems who buy power at wholesale. that doesn't mean it is 2 their sole source of power. 3 CHAIRMAN RIGLER: Donied. 2 BY MR. REYNOLDS: 5 13 Mr. Kampmeier, have you made any studies to 6 determine what difference it might make to the cost of 7 power to small systems if there were an arrangement to 3 wheel power to the small systems in the State of Ohio? 9 Not in any depth. We have looked at it enough A 10 to see that there are differences in rate levels in various 11 parts of Ohio, in both wholesale and other. And that some 12 of these differences are in the direction of lower prices 13 in areas outside the CAPCO area, for example, which I 14 assume even though your question didn't refer to specifically, 15 you are most interested in. 16 Therefore, opportunities for obtaining power 17 elsewhere are indicated as potent ally existing. 18 In addition to that question, you have all of 19 the other questions about wheeling for economy purchases 20 and so on. 21

6032

Q I take it your answer to my question is no?
 A You better read the question.
 (Whereupon, the reporter read from

the record, as requested.)

ar4

22

23

24

ar5	6083
1	THE WITNESS: Because of the word, what difference
2	does it make, I think the answer is. I assume that implies
3	a degree of specificity which I don't claim.
4	MR. REYNOLDS: I didn't catch the last part.
5	Will you read it?
6	(Whereupon, the reporter read from
7	the record, as requested.)
3	BY MR. REYNOLDS:
9	Q Mr. Kampmeier, are you aware of anything which
10	a wholesale customer could ask its wholesale supplier to
_11	do for it which if the wholesale supplier refused, that
12	customer could not go to the FPC and complain about it?
13	A If there is anything it couldn't complain about
14	I think there are a number of things which the FPC would
15	say was not in their jurisdiction.
16	Q What would those things be, in your view?
17	A For example, requests for a share in a nuclear
18	power plant.
19	Q Anything else?
20	A There is being litigated the question of
21	whether the FPC would take any responsibility in the case
2.2	of a complaint that the wholesale rate was inequitable
23	in relation to industrial rates.
24	Q That issue has already been decided in the
25	Court of Appeals, hasn't it?

and the second

A

If it is, I am interested to know it.

S31	1	Q. Your reference is to the Conway decision, is
<b>v</b> 1	2	it not?
	3	A. I think that is what it is called.
	4	Q. When did you first become aware of that
	5	decision?
	6	A Weil, when it was made.
	7	u Pardon me?
	8	A When it was made.
	9	Q in page 31 of your testimony you indicate that
	10	where the small system obtain most of the benefits of
	11	interconnection, then one might reasonably expect the large
	12	system in .such a case to request the small system to bear
	13	most of the interconnection costs.
	14	A Near the top of the page?
	15	Q Yes.
	16	Have you made any studies to determine whether that
	17	is true in thecase of the City of Cleveland, and is it
	18	the reason why the City is obliged to pay the full cost
	19	of interconnection with CEI, as you indicate on page 45
	20	ofyour testimony?
	21	MR. CHARNO: Could I have the first page
	22	reference?
	23	MR. REYNOLDS: 31.
	24	THE WITNESS: Yes, I'm familiar with the elements
	25	in that situation. The interconnection for which CEI which
		the City is being obliged to pay the sole costs are not

bwl

	6086
1	the kind of a situation described on page 31, which involved
2	tapping an EHD line or extending normally lines and that,
3	and only that, the facilities I would anve to recheck
4	the specifics of what is involved in the interconnection,
3	and how the agreement describes it before I go on to testify
G	more specifically to that.
7	I don't remember the details, as well as I thought
3	I did, when I started to answer the question.
9	BY MR, REYNOLDS:
10	Q Isn't it correct that the FPC ordered Clevelan
11	to pay for the full cost of the interconnection?
12	A. Yes, I think they did.
13	Q In referring, Mr. Kampmeier, to the Painesville and
14	City of Claveland agreements with CEI, you state that the
15	several years of negotiations preceding those
16	agreements seem unduly long. Do you know how long those
17	negotiations took?
18	A I asked some questions about that, and I looked
19	through the material that was put in the record in that
20	regard.
21	I gather that they had been going on intermittently
22	for quite awhile.
23	But I don't have a specific recollection as
24	to the precise length of time.
25	Q Do you know how long it took to negotiate the

ES 31

bw2

- i	coordination arrangement between TVA and the Association
2	of Private Electric Utilities, known as the South Central
3	Electric Utility Companies?
4	A The first one I was directly involved in, and
5	my recollection is that it took about three months.
6	Q When was that first agreement signed?
7	A Oh, my goodness, about 1950, give or take
8	five years.
9	Q Is it not true that Mississippi Power and Light,
10	representing the South Central Electric Companies, stated
11	engotiations in 1959, based on that first contract with
12	TVA and that a coordination agreement was not signed
13	until 1965 for seasonal diversity exchange of 1500 megawatts
14	byt 1968?
15	A That is quite possible. I was not so directly
16	involved in those negotiations, but if I may if you are
17	interested in having enlightment on the circumstances, I
18	would be glad to give it to you.
19	CHAIRMAN RIGLER: No, let's just respond to the
20	question,
21	MR, CHARNO: Can I have the question and
22	answer back, the question, then.
23	(The reporter read the record as requested.)
24	MR. CHARNO: I think the record is unclear as to
25	what was answered there. The question is unclear. I

bw2

----

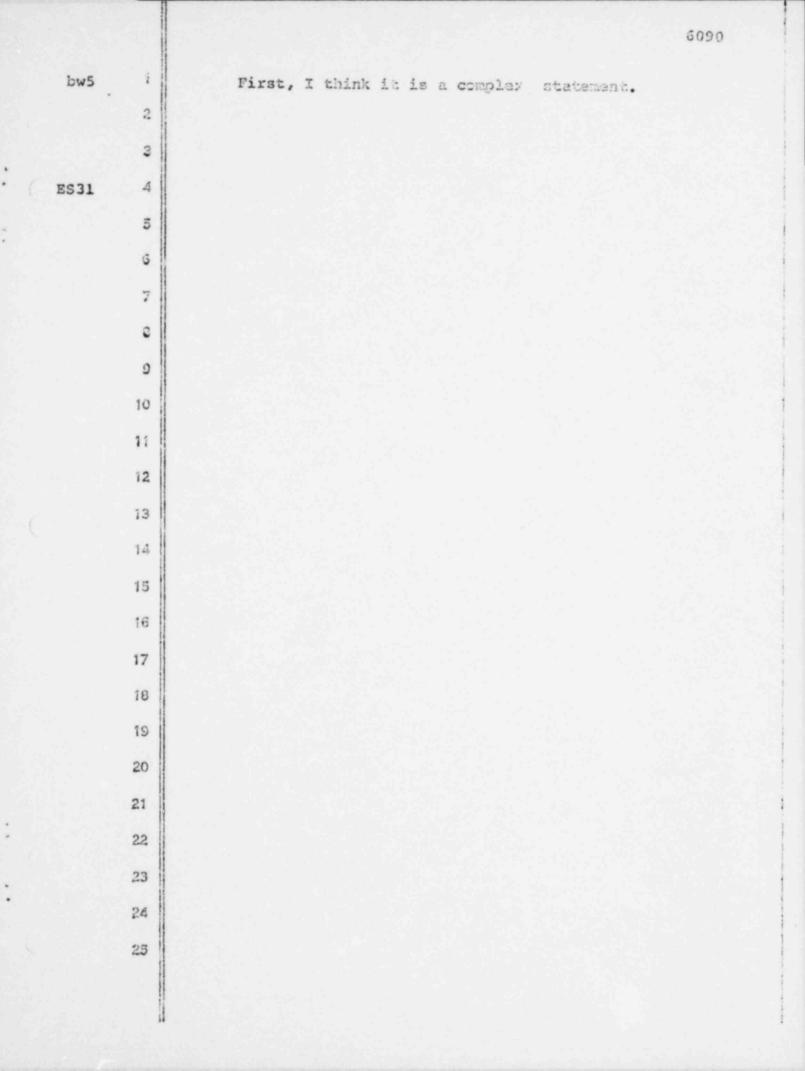

bw3	6088
1	would point that out in case someone wants to
2	straighten it out.
3	BY MR. REYNOLDS:
4	Q Mr. Kampmeier, would you not consider it
5	reasonable for two or more parties to bargain in good
6	faith over the terms and arrangements of a coordination
7	agreement for a considerable period of time, if there were
8	complexities involved of the sort that are inherent in that
9	kind of an arrangement?
10	MR. CHARNO: Has the Witness previously testified
11	to the inherent complexities or did you want to ask him
12	that, as a foundation question?
13	BY MR. REYNOLDS:
1.5	Q Would you consider that a coordination arrangement
15	would be sufficiently complex that it would be reasonable
16	forparties to bargain for some period of time in good
17	faith before arriving at an agreement?
18	MR. CHARNO: What kind of coordination agreement?
19	BY MR. REYNOLDS:
20	Q A complete coordination agreement.
21	MR. CHARNO: As he has defined complete
22	coordination?
23	MR. AEYNOLDS: That is right.
24	Mr. CHARNO: Fine.
25	THE WITNESS: The first such agreement

-----

1	entered into in a given region involving the major
2	participants, I would expact, would take quite awhile.
3	Subsequent ones ought to go a lot faster.
4	BY MR. REYNOLDS:
5	Q Mr. Kampmeier, let me ask you if you agree with
6	this statement. One unique feature
7	MR. LESSY: Could Counsel identify the source
8	of what he is reading?
9	MR. REYNOLDS: NO, I'm asking if he agrees
10	with the statement I'm about to make to him.
11	BY MR. REYNOLDS:
12	Q One inique feature of the CAPCO pool relates
13	to the installed research requirements of each
14	member. Minimum reserves and percent of peak hour load
15	are not established nor are such reserves equalized.
16	A computer program is utilizee to allocate
17	the amount of new generation to be owned by each member,
18	so that the dependence on the power pool, as measured by
19	loss of load probability studies, is the same for all
20	members,
21	The reserve requirement of each member is
22	related to the size and performance of its capacity resources
23	an load characteristics. Do you agree with that
24	statement, or do you have any reason to disagree with that
25	statement?
	MR. CHARNO: I have a double objection.

bw4

And and a state of the state of

It is a description and not something that can be agreed with without knowing what the referent is. It is misleading in that context. The witness could be directed to the statement in print and allow him to go through the description and see if it is or is not or whether he can tell if it is an accurate description of what it is describing, which isn't set forth in the statement as read.

6091

MR. REYNOLDS: Mr. Chiarman, I think that if we want, I can go through it again slowly, but I'm entitled to ask the witness or give the witness a description and ask him if he has any agreement or disagreement with it without regard to whether it comes from my own head or some other source.

MR. CHARNO: The problem is what it is a description of. You are asking does he agree with a description. In the abstract. It is, but do I agree with that? How do I know until you show me what it is? It is an impossible question to answer.

MR. REYNOLDS: The witness has testified
as to his familiarity with regard to reserve requirements
of the CAPCO pool both in response to Mr. Lessy's questions
and in response to my questions.

The statement I read to him or made to him refers to one unique feature of the CAPCO pool relating to installed reserve requirements of each member.

16

17

18

arl

2	The witness, before he faels confortable
2	answering as to his agreement or disagreement, 12 he would
3	like me to read it again slowly or have the reporter
4	read it slowly, I would be happy to do it.
5	MR. CHARNO: I withdraw the objection, as long
6	as we know what it is describing.
7	MR. REYMOLDS: Would you like to hear it equin?
8	MR. CHARNO: Nould it be more helpful to have
2	it in writing in front of you?
10	THE WITNESS: It cartainly would.
11	MR. CHARMO: Do you have objection to placing
12	the statement in writing in front of the vitness so that he
13	can read it?
14	MR. REYNOLDS: Why don't you read it book and
15	if he has problems after that, we can put a copy in front
16	of him.
17	MR. LESSY: The witness testified it would be to
18	his advantage to see it in writing. I think this kind of
19	cross-examination where you don't give it to him in
20	writing, when it is a technical statement he would like to
21	see in writing, it is not fair to the witness or this type
22	of procedure.
23	I would be glad to give the witness by dopy.
24	I have been furnished with it. Why can't the witness have a
25	copy? I would like the witness to be furnished with a
1	

	8093
1	copy.
2	CHAIRMAN RIGLER: I'm prepared to overrule
3	the objection and parmit the witness to answer the
4	question.
5	However, it is so long and so complex that I
6	do agree it is unfair.
7	One procedure would be to write out the
8	statement separately. There is a lot of fencing going
9	on here over nothing. Plainly it would be more productive
10	for the witness to read the whole statement on a piece of
11	paper.
12	MR. REYNOLDS: I don't disagree, I think there
13	is innecessary fencing. I'm trying to expedite this so
14	we can reach the 3:30 scheduls, and now it looks like we
15	will miss that.
16	If you want to stop and have us write it out, we
17	will write it out. It's a straightforward statement
18	and I'm entitled to make a statement to the witness and have
19	him, without regard to the source of that statement, give
20	me his response as to whether he agrees or disagrass or
21	whether I'm quoting or not quoting. It is legitimate
22	cross-examination.
23	CHAIRMAN RIGLER: I agreed with you up to that
24	point. The problem is where you have a statement going
23	to three or four santences it is practically impossible for

-----

4	0034
1	the witness to deal with it in that fashion.
2	Read it to the witness slowly, and if he wants
3	it in writing, he may have it in writing.
4	(Wharaupon, the reporter read the
5	pending question, as requested.)
6	THE WITNESS: May I assume what you are asking
7	me is whether I agree that this decaribes adequately
3	in such a way that a utility engineer would see the picture
S	what this unique aspect of the CAPCO arrangements ara;
10	and if not, what are you asking me that I agree with?
11	BY MR. REYNOLDS:
12	Q I'm asking you whether that is an adequate
13	description or accurate description of the CAPCO secence
14	sharing arrangement as you understand it.
15	A No, I don't think it is that.
16	Q Let me put in front of you, in order to
17	expedite matters, and ask you to read a section of page
18	II-2-40 of the 1970 National Power Survey, Part 2,
19	entitled "Generation Reserve Methods," and I have distributed
20	copies of this to the other parties and the Board.
21	I ask you whether go shead and read that.
22	A You want no to read the ontire section under
23	that heading?
24	Q Right, "Generation and Reserve Mathods."
25	A I have read it.

ar5	6095
1	Q Do you have any reason to quarrel with that
2	statement?
3	A A little bit, yes. I think it is a little
4	misleading in one part. There is an implication here
5	that if a system or a pool determines that it needs a
3	certain percentage of peak load as a minimum of reserve
7	capacity, that this determination would not have
8	taken account of probabilities, would be based on a non-
<u>e</u>	probabalistic method.
10	I don't think that is true at all. Most large
11	systems and most pools these days determine their total
12	reserve requirements for the combined system by probabalistic
13	methods.
14	I would rather say probability methods have
15	rather than use a word I find it difficult to pronounce.
16	Then they quite often express it as a percentage
17	in order to use that percentage for purposes of acsigning
18	reserve responsibilities to the members of a pool.
19	It would tend to throw a person off the track
20	here. As long as that point is kept in mind, that you can
21	use the probability method for the combined system, and
22	then express the answer as a percentage of peak, then I
23	don't think I have any other problems with the statement,
24	at least in first reading.
25	Q You are not suggesting when it is expressed as a

6	6096
1	percentage of peak that it is an equal percentage?
2	A It is a single percentage of a single figure
з	which is the combined system peak load so the equal has
4	no applicability.
5	Q What pools do you have in mind where that
6	method is followed?
7	A I think it is done in, I would say, the great
8	majority or at least a majority of cases.
9	The same report from which this is taken
10	indicates at other places that either in so many words or
11	more probably by implication, that most pools express their
12	reserve requirements as a percentage of the total,
13	largely in order to be able to use that as a single method
14	or allocating it.
15	But that doesn't imply or shouldn't be inferred
16	to mean that they got that number by drawing it out of a
17	hat. That number was arrived at by studies of the system
18	and its needs and the type of equipment it had, and
19	involved varying degrees and varying cases of puobability
20	analysis and in every case that I'm aware of.
21	I don't know of any large pool which deesn't
22	spend some time and energy and effort in probability
23	analysis.
24	MR. REYNOLDS: Mr. Chairman, I would like to
1.1	

ar6

25

MR. REYNOLDS: Mr. Chairman, I would like to mark for identification this page, II-2-40, from the 1970

ar7	6097
1	National Power Survey Part 2 as Applicant's Exhibit 103, and
2	move it into evidence.
3	MR. LEGSY: Stuff has no objection, but for its
4	own part, we would reserve the right to since this is the
5	first page of a chapter of that report, to acve into
G	evidence at another time other portions of that diapter
7	which may be relevant to this subject.
8	CHAIRMAN RIGLER: I hear no objection to the
S	receipt into cvidence. But the Board Hight have a
10	question.
11	Evidence of what? Are you putting it in for the
12	truth of the matter contained therein? Recause the witness
13	said he didn't agree with all of it. What do you want the
14	Board to do with it, if you move it into evidence?
15	MR. REYNOLDS: What I'm doing is moving it in as
16	opposed to reading it into the record to give the Board
17	and anyone else who reads the record an understanding of
18	what the witness' testimony is with regard to the matter
19	that is discussed here, his understanding of it.
20	CHAIPMAN RIGLER: For that purpose, it can be
21	received into evidenco.
22	Hearing no objection, Applicant's Exablt No.
23	103 will be admitted at this time.
24	
25	
1	

1 (The document referred to 2 was marked Applicant's Exhibit 103 for identification, 3 and was received in evidence.) 4 BY MR. REYNOLDS: 5 Mr. Kampmeier, I notice on page 45 in response 6 0 to question 88, you note that under the CEI-Cleveland 7 agreement, if the emergency becomes so severe that 3 the frequency drops 2-1/2 percent, the interconnection 9 would be opened. 10 Are you suggesting that there is comething 11 wrong with that provision? 12 A I'm suggesting that that is not standard 13 industry practice. That one of the purposes of 1.4 interconnections and emergency arrangements is to use them to 15 the fullest possible extent under any and all emergency 16 conditions and the more serious the emergency, the more 17 important to try to use them. 18 And, therefore, to deliberately open an inter-19 connection under an emergency condition and thereby 20 interrupt the ability to provide emergency assistance is 21 running counter to the basic purpose of the arrangement. 22 Let me show you what has been marked as NRC Exhibit. 23 235. It is Document No. NRC 235. It is CEI-Cleveland 24 agreement for installation and operation of a 138 kV 25

ar8

33

ar9	6099
1	synchronous interconnection.
2	I ask you if paragraph 1.3.2 is the paragraph
з	that you have reference to in response to question 88.
4	It is on page 5 of the agreement.
5	A Yes, that is what I have reference to.
6	Q The contract provision requires automatic
7	load shadding equipment sat to trip 10 parcent of the
8	system load at 59.3 herz; is that not correct?
٥	A You want to give it to me again? I will tell
10	you if that is correct. I guess that is what it cays. Yes,
11	right.
12	Q Is that not the same as the ECAR standard for
13	emergency procedures during declining system frequency?
14	A I don't know, but I would not be a bit surprised
15	at that part of it, and perhaps the next part of it also is
16	consistent with the ECAR standards.
17	I question the final part about the opening of
18	the tie is in line with ECAR standards.
19	Q Will you read the final portion?
20	A And the CEI and NELP tie at 58.5 horm.
21	Q Is it not true that the emergency procedures
22	for ECAR during declining system frequency are as false
23	at 58.5 herz if frequency is declining, take any
24	action that is necessary to arrest frequency decline?
25	This may include additional load shedding manual or

And a second second

arl0	61.00
1	automatic, and coordinated networtk separations?
2	A It may require. It dossa't say it will require.
3	Q Is network separation the same as opaning up a
4	tie?
5	A Usually, yes.
6	Q Let me ask you to assume, Nr. Kampmeier, two
7	systems, one we will call Company X, and the other wa
8	will call Company Y.
9	Company X has 1000 megawatt peak load isolated
10	and Company Y has 1000 megawatts peak load isolated at
11	different times.
12	Then assume that these two companies inter-
13	connect, and the combined paak load is 1500 megawatts.
14	With Company X having 1000 megawatts and Company 2 500
15	megawatts at time of system peak.
16	Then assume that at the time Company Y has a
17	1000 megawatt peak, that the load of Company X is 400
18	megawatts.
19	Now under method B, which I believe Mr. Lessy
20	coined as a reference to your one of your reserve
21	methods set forth on page 42, the second one, assuming
22	20 percent reserve, Company X would have 200 megawatts
23	reserve obligation, and Company Y would have 100 magawatts,
24	is that correct, under that hypothetical?
25	A I would have to get the figures down. I'm

-----

arll	6101 - 6102
1	sorry, I didn't realize you were going to ask me that
2	kind of mestion. I didn't note the figures. I'm afraid
3	you will have to repeat them.
4	MR. REYNOLDS: No you want to read it?
5	(Whereupon, the reporter read the
6	pending question, as requested.)

		6103
S34	1	THE WITNESS: I think that is correct.
bwl	2	BY MR. REYNOLDS:
	3	+ And the system would have a combined reserve
	A	requirement of 300 megawatts?
	5	A. Yes.
	3	Q Now, let's assume that at the time Company "Y"
	7	has its peak of 1,000 megawatts, that Company "X" increases
	3	its off-peak load by 200 megawatts to 600 megawatts.
	9	The combined peak load would than be 1600
	10	megawatts; is that not correct?
	11	A Yes.
	12	Q And, again, under method B, at 20 percent
	13	reserves, Company "X" would then have 120 megawatts
	14	reserve requirement and Company "Y" would have a 200
	15	megawatt reserve requirement?
	16	A. Yes.
	17	Q. For a total of 320 megawatts combined reserve
	18	requirement?
	19	A. Yes.
	20	Q. So under that hypothetical, Company "X", by
	21	increasing its off-peak load by 200 megawatts will have reduced
	22	itsreserve requirement by 40 percent or 80 magawatts,
	23	and its total installed capacity requirement from 1200 to
	24	1120 megawatts; is that not true?
		MR. CHARNO: Could I have that question back?
	25	I think you may have misspoken.
	a	

	6104
1	(The reporter read the pending question.)
2	MR. CHARNO: You said off-peak load,
3	by increasing its off-peak load.
4	MR. REYNOLDS: That is right,
5	BY MR. REYNOLDS:
6	Q Is that right?
7	' I will accept your figures, yes.
8	Q And at the same time Company "Y" would have
9	doubled its reserve requirement with no change in its
10	peak; isn't that right?
11	A. Yes.
12	Q Now, in that situation, would you still conclude
13	that method B is the most fair and lotgical alternative
14	for computing the reserves of the coordinated system?
15	A No, not necessarily. This is not the example
16	that I was discussing at all of small systems joining
17	a large system.
18	You are talking here about systems of equal
19	size which changes the ground rules quite a bit.
20	CHAIRMAN RIGLER: Wait a minute. Do you want
21	him to continue this answer?
22	MR. REYNOLDS: Yes, that is fine.
	THE WITNESS: In the first place, it wouldn't
23	necessarily be a bad answer in view of the fact that in one
25	case the peak is determined in very large and overwhelming
11	

bw2

		6105
3		degree by one system, and in the other case by the other.
	2	But I doon't think I would favor this method over
	10	Method A.
	1	I would probably favor method A in almost any
	5	situation where you are combining systems of equal size.
	10	Then what you are doing is starting, in effect,
	7	in equal terms, and you don't have to take account of the
	3	point that one of the points I was describing here of the
	9	large system as compared to the small system, already
1	0	having achieved most of the benefits of diversity.
1	1	Nere you are starting with equal opportunity,
1	2	with equal opportunity for participation, for gain,
ĩ	3	and in that sort of a situation the question of which one,
1	4	perhaps, by chance might turn out to be the cue whose
1	5	peak came at the time of the combined peak, would be a coin-
1	6	tossing sort of a chance-taking that probably there is
1	7	no particular point in introducing.
1	8	The situation I was talking about is when you
1	9	are addressing a small system or group of small systems
2	0	to a lrge system, the large system has already achieved
2	1	the benefits of coordination in large measure, reserve-
2	2	sharing arlit is bound to, 99 percent of the time, at
2	3	least, to be the system which produces the time of the
S	4	system peak. And the small system has nothing it can do
2	5	about shifting the time of that peak.
	11	

And what its load is at the time of that peak, and what its capacity contribution is to carrying that combined load, is the thing then taht becomes important and you have to focus on.

Q Mr. Kampmeier, assume that the equipment of the Municipal Electric Light Plant of the City of Cleveland is in such a condition that its total capacity of over 200 megawatts at the present time has a generating capability of 25 megawatts or less.

That its peak load is about 100 megawatts, and 10 its minimum load exceeds 25 megawatts. If, in that situation 11 MELP interconnects with CEI, would you expect the combined 12 reserve requirement of the two systems to be higher, lower 13 or the same as the reserve requirement for CEI and MELP 14 prior to the interconnection, assuming that the reliability 15 of the combined system is at least equal to the reliability 16 of CEI system prior to the interconnection. 17

18 A If we leave out all of the words, except the kay
19 words or the specific question, he is asking me to raply
20 to, I guess that is impossible.

I will have to aks you to read the whole thing. (The reporter read the record as requested.)

THE WITNESS: Before I could answer that, I would have to make some additional assumptions dealing with the question of how MELP carries its load. If you accept the

bw4

5

6

7

3

9

21

22

23

24

25

bw6	6107
Ţ	hypothesis you have stated it is necessary for MELP to have
2	arranged for a supply of power in the amount of roughly
3	100 megawatts, possibly more, depending on the nature
4	of the supply, but at least 100 magawatts, in order that
5	it could carry the 100 megawatt load, when it
6	loses the only sepacity that you say is usable, 25 megawatts.
7	If the arrangement for the other 100 were such
з	that it could lose more than 25 of that, in one chunk,
9	thenit would have to arrange for some larger amount, but it
10	would have to arrange for at least 100. BY MR. REYNOLDS:
13	Q Let's assume that it gets that amount from its
i2	interconnected partner,
13	A Arranges to obtain to obtain 100 magawatts from
14	CEI.
15	Q All right.
16	A Then that 100 megawatts becomes part of CEI load.
17	So, now you have a CEI load of a certain
13	amount of its own load, plus 100 megawatts from MELP and
19	another MELP load of 25.
20	CEI needs a certain amount of reserve for its load
21	of its own load, plus the 100. MELP needs a reserve
22	of 25 megawatts for its 25. When you combine that 25
23	with the CEI load of its own load, plus 100, then I think
24	that the combined reserve requirement, probably could go down
25	to the extent of some part of that 25 megawatts.
	Q How much did you figure CEI would have to
1	

7	increase its reserve requirement to pick up the 100 megawatt
2	load of MELP?
3	A Well, I didn't make an assumption, because I made the
4	assumption that that step had been taken, whatever it
5	involved, in order to be able to answer your question.
6	If you want to go back and

bv7

<b>#35</b>	5109
arl ¹	Q That couldn't have been taken prior to the
2	interconnection?
3	A No, but that isn't what you asked me.
4	Q If a system adds load without increasing
5	capacity, doesn't it have to increase reserves?
õ	A Yes.
7	Q That would be similar to the situation we just
9	described, wouldn't it?
9	A I answered that too hastily. The system adds load
10	without adding capacity
11	Q Assuming it wants to maintain the same level of
12	reliability.
13	A It depends on the nature of the load. If it is
14	adding load which adds to its peak load if it is off
15	peak, it's another matter if it is on peak, then it
16	has to add firm capacity and not just reserve. It has
17	to increase its capacity to carry that increased load.
18	Whether or not it needs more reserves in addition
19	to that increased capacity, chances are it does, but that
20	would depend on the nature of that capacity that it was
21	increasing and what impact it had on the probability
22	analysis.
23	Q You indicated in your earlier testimony on
24	cross-examination that it was your understanding that CAPCO
25	freezes the percentage of ownership in the units.
	"

1	A I think I said the CAPCO method tends to freeze
2	it. I would have to check, but I think that is what I said.
3	I believe that the contracts actually do repeat the
4	same percentage figures unit after unit, for a series of
5	CAPCO units which I suppose could be interpreted as freezing
6	it.
7	I tended to talk about tendency toward freezing.
8	I'm sure I said that in the early reference to it.
9	Whether I repeated that every time, I'm not sure.
10	Q I will ask you to look at page 5867 of the
11	transcript and read for me the answer you gave at the top of
12	the page there.
13	A Well, that is not my understanding of how
14	CAPCO operates. That is why I criticize CAPCO. CAPCO
15	freezes percentages.
16	I would like to check whether that is the first
17	place at which I made reference to that term. If so, I
18	would have to correct what I just said.
19	My recollection is that I used the
20	qualifier at some stage of the game.
21	Q Maybe I can speed this up a bit.
22	Assuming you did use a qualifier of tends to
23	freeze at some earlier point and you said freezes there in a
24	looser manner than you intended to, what is the basis
25	for your conclusion that it tends to freeze or it freezes

ar2

2

3

4

5

6

percentages of ownership, CAPCO does?

A The CAPCO formula for allocated computed total reserve requirement among the systems is geared to what their hypothetical requirements would be if they operated in isolation. That is the part I took exception to as being undesirable.

7 By doing that, the effect is that if in any given unit that is being added, any system takes a 8 9 rather larger share of that unit than it has been taking of other units; this then enters into this hypothetical 10 calculation of what its capacity situation would be 11 in isolated operation and because of that disproportionately 12 large piece of capacity, the computer comes out with the 13 answer that under isolated operation this system needs 14 more reserve from time to time than other would, or than 15 this one would if a piece of that unit were smaller and 16 as a consequence, the method is used, shifts to that 17 CAPCO company and additional piece of the total requirement 18 and relieves the other companies of pieces that add up to 19 that corresponding shifted amount. 20

In order that that won't happen to any company because no company wants to have its assigned reserve increased any more than necessary, it is obliged to say well, never mind this idea I had of wanting a bigger piece of that unit.

If that is what it is going to do to the reserves you are going to assign me, lat's go back to the same percentage we used the last time and the time before and the time before, and this becomes in effect a somewhat forzen set of percentages. Now -- I guess I better stop there. I'm not sure how much further I should pursue it. Q Is it not a fact that the ownership shares

6112

of the CAPCO companies in the various CAPCO units are not identical for all units?

A The first Davis-Besse unit, for instance, is different. But my recollection is that for those after that, the figures or the series of units and up to and including the last unit that has been projected remain uniform. I would be glad to stand corrected on that if you show me an indication to the contrary.

Q Is that the basis for your conclusion that the percentages are frozen, or tend to be frozen?

A That is the evidence that they tend to be. The basis for the conclusion is that that is the way the unique CAPCO reserve sharing method works out, that is the pressure that it puts on the members.

Q Is it not a fact that the ownership shares of each of the CAPCO members at the present time have no impact on that member's capacity responsibility?

ar5	6113
1	A Would you repeat that, please?
2	(Whereupon, the reporter read the
3	pending question, as requested.)
4	THE WITNESS: At the present time, you mean before
5	these joint units are added to the system, I take it?
6	BY MR. REYNOLDS:
7	Q No, I mean including the joint units.
8	A In other words, not at the present time, but
9	looking ahead.
10	Q At the present time and looking ahead.
11	A Do I understand your question to be this:
12	Do I not know that the amounts of capacity,
13	reserve capacity assigned to the different systems
14	looking ahead to a point in time after, say, the
15	Perry Units come in, is the same under the CAPCO method
16	as it would be if Perry 1, say, were ownad entirely by
17	one company?
18	If so, then my answer is no, that is not my
19	understanding of how it works.
20	Q Let me ask you this in the context of completa
21	coordination with planning on a one-system basis, would
22	you not agree that the participants would need to agree
23	on a reliability standard for the pool and also would
24	have to accept an individual reserve responsibility in
25	order to maintain that level of pool reliability?

-----

	6114
	A That's correct. The point of difference
	comes in how they do the second part in that.
	Q All right.
	And I believe you indicated yesterday, another
	topic of conversation, that it was your view that a five-year
	commitment by wholesale customers to take power would be
	an appropriate term in order to make possible high debt
	ratio financing.
	Am I paraphrasing you?
	A No. I don't think I said that.
	Q Will you correct me then?
	A I think that if you are going to have high
	debt ratio financing of a generating transmission system,
	with that high debt ratio of financing made possible by
	take or pay for contracts that would assure the
	pay-out of investment then those contracts would have to be
	for a period as long as the period covered by the bond
	issue.
	If you sold 30-year bonds that would be a 30-
	year contract. Five-year references is in a totally
	different context referring actually to industrial
	contracts of a size that would be pretty modest compared
	to a sort of general operating plant of this size.
	MR. RZYNOLDS: I don't have anything further.
;	CHAIRSON RIGLER: All right. We will take a

ar6

ar7	6115
1	break.
2	(Recess.)
3	REDIRECT EXAMINATION
4	BY MR. CHARNO:
5	Q Mr. Kampmeier, you previously testified
6	that TVA distribution utilities or rate committee who
7	represent TVA distribution utilities and TVA agreed that
8	TVA was to serve what ulutimately became approximately
9	what was 50 industrial customers.
10	Are you aware of any benefits that might flow to
11	those distribution utilities by virtue of making that
12	agreement?
13	A Yes. The arrangement between TVA and the
14	whole 150-distribution systems is designed to effectuate
15	the Congressional policy that the power projects that TVA
16	builds are to be available for all the people in the
17	region, particularly the domestic rural consumers, and
18	and the sale of power to industries should be a secondary
19	purpose and so on, so by TVA serving those particular
20	loads and having some margin above costs in serving
21	them, this helps to effectuate a policy of keeping the
22	wholesale rate to all 150 systems at as low a level as
23	possible.
24	MR. REYNOLDS: I didn't hear the last part of
25	your answer.

ar8	
aro 1	6116 THE WITNESS: Keep the wholesale rate to all
2	150 distribution systems as low as possible.
3	BY MR. CHARNO:
4	Q You also testified, sir, as to the establish-
5	ment of a series of retail rate schedules by TVA and
6	the municipal utility rate committee.
7	Can you tell us what motivated the establish-
3	ment of such a series of rate schedules?
9	A The same Congressional directive of making
10	power available at the lowest feasible rates. Each
11	distribution system agrees to operate on a nonprofit
12	basis with the amount of money that is made available
13	to the general fund limited to reasonable percentage of
14	revenue.
15	Therefore, in order to be able to have the
16	lowest feasible rate in each area, it took a series of
17	different rate levels to make that possible.
18	Q Was there any specific reason that TVR sought
19	this lowest possible rate?
20	A Well, the Congressional directive to do just
21	that is required by the TVA Act, plus the fact that that
22	is consistent with TVA's whole reason for being.
23	Its reason for being is the economic development of the region
24	with one of the major tools being the availability of low-
25	cost power.
-	

end 35

And the second s

----

S36	1	Q Sir, yesterday you testified concerning the
wl	2	Central Power Electric Cooperative, and the Central Power
WI	3	Association. And then Counsel for the Applicants asked
	4	you a number of questions that used these terms interchangeably.
	5	Can you tell us whether there is any relationship botween
	6	the Central Power Electric Cooperative and the Central
	7	Power Association?
	3	A No, none whatever. Contral Power Electric
	э	Cooperative is in South Dakota and Central Power Electric
	10	Association is in South Carolina.
	11	" Q In your testimony, would you have referred to
	12	Central Power Electric Cooperative in the context of the
	13	South Carolina Public Service Authority or the Southeastern
	14	Public Service Administration?
	15	A No, I think I would not have. I intended not
	16	to, and I think I kept my references straight.
	17	Q Yesterday, or previously, you testified that
	18	you thought the physical consolidation of service areas
	19	that occurred subsequent to World War I was, in your opinion,
	20	desirable,
	21	Would you also view as equally desirable, the
	17	consolidation of ownership that took place subsequent
	23	to World War I?
	24	A Not as equally desirable. There were many desirable
	25	aspects to the consolidation of ownership. Much gain by

owl

and a second

bw2	5119
1	many consolidations of ownership. They went to far up to
2	the point of enactment of the Holding Company Act.
3	Q Sir, yesterday, you ware questioned on your
4	direct testimony that the generating capacity owned by
5	industrial concerns today comprised about 100 percent of
6	the country's total generating capacity; is that correct?
7	A. Yes.
8	Q Were you able to subsequently recall the
9	source of that information?
10	A Yes. When I was testifying, I said first I
11	thought it was the National Power Survey. Then I said
12	on second thought maybe it was the Electrical World, and
13	it was the Electrical World, in their 100 Anniversary
14	Issue,
15	MR. CHARNO: I would like to have marked for
16	identification as DJ-453, a two-page document titled on the
17	first page, "The Utility Industry," and indicates in
13	the lower right-hand corner "Electrical World, June 1,
19	1974.
20	(The document referred to was
21	marked DJ Exhibit 453 for
22	identification.)
23	THE WITNESS: The reference to the statement is
24	on the second page at the end of the second full paragraph.
25	

	0117
1	BY MR. CHARNO:
2	Q This is the source material to which you
3	referred, sir?
4	A. Right.
5	MR. CHARNO: We would move DJ-453 into evidence.
6	MR. REYNOLDS: Wait just a minute.
7	No objection.
3	CHAIRMAN RIGLER: Department of Justice 453 will
9	be received into evidence at this time.
10	(The document heretofore
11	marked Exhibit DJ-453 for
12	identification, was received
13	in evidence.)
14	BY MR. CHARNO:
15	Q Mr. Kampmeier, you testified at some length
16	concerning a hypothetical posed to you by the Counsel
17	for the Applicants.
18	The testimony appeared between pages 5886 and
19	5907 and then 5912 and 5929, and in that hypothetical you
20	compared a small coal-burning plant with a large nuclear
21	unit.
22	I would like to ask you, whether when you
23	described the coal-burning plant as opposed to the nuclear
24	unit, or when you were working with that, did you make any
25	assumptionn concerning the geographical location of that

bw3

-----

1	small coal-burning plant?
2	A. No, I think no such assumptions was specified,
3	and I didn't make one,
4	Q With respect again to the small coal-burning plant,
5	when you gave the cost of fuel, did you assume that that fuel
6	would be locally available or transported from a distance?
7	A Well, available in the general vicinity.
8	There, I think by this time, I think there was
9	some reference to coal cost in the State of Chio.
10	And I think that my estimate of about one
11	cent for the cost of coal made the assumption that we
12	were talking about a plant in THE CAPCO area burning Ohio
13	coal.
14	
15	
16	
17	
18	
19	
20	
21	
22	
23	
24	
25	

ES36

\$37	6121
arl 1	Q If that coal were transported from the western
2	portion of the United States, would the coal costs be
3	
4	higher than the one cent that you assumed in your hypothetical
	answer?
5	A Yes, it would; probably considerably higher.
3	Q Did you make
7	MR. REYNOLDS: I'm sorry, Steve. I'm missing
8	the last parts of your answers. What did you add?.
9	THE WITNESS: I said yes, it would be higher;
10	probably considerably higher.
11	BY MR. CHARNO:
12	Q In establishing the capital costs of that small
13	fossil plant, did you make any assumption with regard
14	to environmental standards?
15	A Well, the first question asked by the
16	hypothetical of the small coal-burning plant was the question
17	of capital costs.
18	I think I indicated that I was gearing my
19	figures to the sort of plant that has been built in the
20	last couple of years, plus some more or less average allowance
21	for escalation.
22	That would mean that insofar as I made allowance
23	for the effect of the environmental requirements, I was
24	gearing that assumption to average circumstances surrounding
25	average small coal-burning plants put in service during the

25

ar2

last couple of years.

2 If that hypothetical, small coal-fired plant 0 were built in Northeastern Ohio at some point in the 3 future, would the environmental standards and resulting 4 capacity costs be higher than those that you assumed 5 in your answer to the hypothetical? 6 MR. REYNOLDS: Could I have that question 7 back, please? 3 (Whersupon, the reporter read the 9 pending question, as requested.) 10 THE WITNESS: Almost certainly yes. 11 BY MR. CHARNO: 12 Sir, I would like you to read a statement and 0 13 ask you if you can agree with it in the context of 14 your last answer. 15 "In view of current requirements for effluent 16 controls at fossil fuel plants, the high capital costs 17 for nuclear power plants is not significantly greater 18 than coal-fired plants. Nuclear fuel presently provides 19 the least costly energy source for large base-load generating 20 plants." 21 Yes, I would agree with that. I assume in saying A 22 so, that the first sentence implies nuclear and coal-23 burning plants of approximately the same -- approximately 24

equal size. If sizes were different, then I would want to

3	5123
1	qualify my answer.
2	I mention that because the hypothetical was
3	given to me and the sizes were different. If the coal-
4	burning plant is smaller, it then runs the cost up more
5	than if that were the same size.
6	Q Let me read the second sentence.
7	"Nuclear fuel presently provides the least
8	costly energy source for large base-load generating
9	plants."
10	A Yes, assuming that that carries implication
12	that the entire quotation were for large plants, that takes
12	care of it. I agree with the entire statement.
13	Q Would it surprise you that that statement
14	was made about plants to be constructed in Chio in the
15	future?
16	A No, it would seem to be very appropriate
17	for plants to be built in Ohio in the Suture.
18	MR. CHARNO: I would like to mark for identifica-
19	tion a three-page document from the 1954 National Power
20	Survey, Volume I, pages 272 and 273. This is the extract
21	upon which the witness was questioned yestorday by the
22	Applicants, and which they have made available to the
23	department.
24	
25	
1	

ar3

r4	6124
1	(DJ Exhibit No. 454
2	was marked for identifica-
3	tion.)
4	BY MR. CHARNO:
5	Q I would like to direct your attention to the
6	second full paragraph on page 273.
7	A Yes, Ihave a copy here.
8	Q And ask you whether you agree with the statement
9	contained in that paragraph?
10	A The one that begins "Continued reliance on
11	small isolated generating plants," and so on?
12	Q Yes, sir.
13	A Yes; I think that is a good statement.
14	MR. CHARNO: We would oave DJ 454 into
15	evidence.
16	MR. REYNOLDS: No objection.
17	CHAIRMAN RIGLER: Department Exhibit 454
18	will be received into evidence.
19	(The document previously
20	marked DJ Exhibit 454 for
21	identification, was received
22	in evidence.)
23	BY MR. CHARNO:
24	Q Sir, over the last three days, you have been
25	questioned repeatedly concerning cost of service, and

ALL AND

ar5	6125
1	your experience with cost of service.
2	Have you ever been employed by a regulatory
з	agency to advise that agency?
4	A Yes. Most recent such consulting assignment
5	has been with the Ontario Energy Board, which is
e	Ontario's agency in lies of a utilities cormission.
7	This will be the third consecutive year that
3	I have will have served as an advisor to that board.
9	Q Was it also brought out that you have served
10	as a consultant to the Public Service Conmission of the
11	State of New York?
12	A That was already mentioned.
13	Q Have you ever served as a consultant to the Federal
14	Power Commission?
15	A Yes, I served as a consultant to the Federal
16	Power Commission over a period of a year on two, 10 or 12
17	years ago.
18	Q What was the nature of your work at that time,
19	and what were the results?
20	A At that time the Federal Power Consission was
21	being reorganized under a new chairman. And was I was
22	asked to assist in exploration of how the Coumission
23	might more effectively implement national power policies
24	as expressed in the Federal Power Act and other
25	Congressional acts and executive orders, and I did so.

25

in which I assisted was a determination by the Federal Power Commission to embark on the national power survey, the published results of which have been referred to here on several occasions, including the exhibit just filed. Another result was the determination of a commission to intensify its interest in wholesale rate regulation and to expand its electric rate regulation staff. I'm choosing my words here, bocause they tie directly into one of the statements that was read from this exhibit yesterday. That objective unfortunately was only partially realized. 0 Are you the author of any publications in the field of electric rates? A Yes. Among them is a manual on ratemaking which I prepared for the American Public Power Association

and which is now in its third edition.

6126

end 37

38		Q Does that deal at all with methods of allocating
bwl	2	costs as a basis for establishing rates?
	3	A Yes, it doss.
	4	Q In your experience with retermaking over the
	5	years, have you found that there is a single accepted
	6	method or a variety of methods for allocating costs?
	7	A A wide variaty of methods that get widely
	6	ranging results.
	9	Q Do other authors in the field of electric rates
	10	agree with that statement?
	11	A Yes, there have been many books written on
	12	rate-making and cost allocations, and the prevailing view,
	13	I guess, I could say, the view practically without
	14	exception is consistent with what I just stated.
	15	Among other examples, a fairly recent one is a
	16	book, volume, published a couple years ago by NARUC,
	17	National Associations of Regulatory Utility Commissioners,
	18	which is devoted in its entirety to cost allocation methods
	19	in use in the industry.
	20	Q Are you aware of whether electric utility managers
	21	also recognize that cost allocation and rate-making are
	22	not enact sciences?
	23	A. Yes. There has been frequent evidence of that.
	24	One that I recall spacifically is a report in the
	25	Electrical World a couple of years ago, on a conference
	1	

-

S

bw2	i	of electric utility executives which dealt with a
	2	number of subjects, including that subject.
	3	Q Do you recall whether those electric power
	4	executives were executives of publicly-owned, investor-
	5	owned or other privately-owned utility systems?
	6	A Investor-owned systems, I believe.
	7	MR. CHARNO: I offer for identification a
	а	three-page document which contains in the upper right-
	9	hand corner the word "management," and which states in
	10	the lower left-hand corner, "Electrical World, January 15,
	11	1974. [#]
	12	(The document referred to was
	13	marked DJ Ehribit 455.for
	14	identification.)
	15	THE WITNESS: This was a report I was recalling,
	16	and I will refer you to not only the first couple of
	17	paragraphs to indicate participants and so on, but the
	18	section beginning on the second page, a third of the way
	19	down the first column, under the heading "measure." It
	20	starts "The fourth need is to develop a uniform method
	21	for measuring cost of service." I believe that paragraph
	22	and the next and the third are and the fourth are
	23	all pertinent to this point.
	24	· In fact, all of them right down to the heading
	25	"Conflict," and then even some of that. The third paragraph

-----

6128

į.

1	under that, it says, "So the fifth planning need is to
2	make use of the benefits" and so on.
3	I think that is also pertinent; the paragraph
4	that follows that is quite pertinent.
5	"Typical cost of service studdied today," and
6	so on.
7	I think those are the key points.
3	Q Sir, are you aware of any regulatory commission,
э	either state or federal which has every prescribed a single
10	method of cost allocation which can't be deviated from?
11	A. I don't recall any such instance. The practice,
12	normally, is not only to allow some wide freedom of choice, as
13	to method used, but also for the subjective interpretation
14	of that method with the assumptions that have to be made
15	to implement it.
16	Q Sir, I notice that 455 makes reference to
17	situations where two individuals can be doing the same
13	cost of service study and come out with two different
19	results.
20	Are you aware of such an instance
21	every occurring? ,
22	A I would put it a little stronger. I have never
23	known two studies to be made that onto out with the same
24	result.
25	MR. CHARNO: We would move DJ-455 into evidence.
1	

	6130
	MR. REYNOLDS: Will you wait just a minute?
	Mr. Chairman, May I ask, maybe I missed it,
5	don't understand what this is. Did the Witness indicate
	hat this statement was that we are looking and, if not, can
100	e ask hom, so I can get clarification.
	I don't understand what the document is.
	THE WITNESS: I did indicate what it was and,
а	ther than to hunt back the enswer I would be glad to
e	epeat it.
	I indicated in response to a question about whether
1000	here is recognition amoung utility managers of the
	act that rate-making is not an exact science, that I have
3	een that illustrated a number of times. One illustration
	h-t I recalled was a report in Electrical World magazine,
a	trade journal of the electric industry, of a utility
	onference which discussed this point among others, and this
i	s that report.
	That reference to that report.
	MR. REYNOLDS: Did you say you had attended this
0	onference?
	THE WITNESS: No, I did not.
	MR. REYNOLDS: May I ask the Department what
t	he purpose is for moving it into evidence?
	MR. CHARNO: The Witness, as an expert, maintains
a	n awareness of what is going on in the electric utility
	ndustry. His awareness of the fact, as I understand his

î	testimony, that utility managers, in this case
2	investor-owned utility managers are aware of the inexact,
з	not only aware, but set it out in some detail in the
4	course of a meeting, is based on the report of a conference
5	published in the investor-owned utility trad magazine
6	and we are submitting it for that conference, that it
7	took place and those were the conclusions reached.
3	We are not aware of any errate that were published
9	or requested,
10	MR, REYNOLDS: I see. I have no objection.
11	CHAIRMAN RIGLER: Department Ex.ibit 455
12	will be received into evidence.
13	(The document heretofore marked
14	Exhibit DJ-455 for identification,
15	was received in avidence.
16	BY MR. CHARNO:
17	Q Mr. Kampmeier, yesterday you testified that you
18	had been instructed by the Department of Justice to
19	target your inquiries at 1973. Were you given any reason
20	for that instruction?
21	A Yes. The point was that anything later than that
22	would raise problems of availability of data for the sorts
23	of analyses I was contemplating and in regards to which I
24	was asking about the availability of data.
25	

1	Actually, it turned out that that created
2	even a little bit of a problem, because the Federal Power
3	Commission, which is one of the more official sources
4	of data is pretty slow about getting out some of its
5	reports.
6	Q Sir, do municipal wholesale customers
7	of TVA at this time pay more or less for comparable
8	quantities of power than their FPC-protected neighboring
9	wholesale constomers?
10	A Less.
11	MR. REYNOLDS: Could I have the question back?
12	(The reporter read the record as requested.)
13	MR. REYNOLDS: I object to the
14	question on the ground that it seems to have no relevance
15	to the Ohio situation or the matters we are looking at
16	in this case relating to Ohio.
17	MR. CHARNO: We had two days of cross-
18	examination on that point.
19	I would be inclined to agree it has no relevance.
20	
21	
22	
23	
24	
25	
1	

\$39			6133
arl	1		CHAIRMAN RIGLER: But it is a subject which
	2		brought up in cross-examination.
	3		MR. CHARNO: It certainly was.
	4		CHAIRMAN RIGIER: Gverruled.
	5		BY MR. CHARNO:
	в		Sir, did you conduct calculated comparisons
	7		lesale and industrial retail rates of Ohio
			Pennsylvania Power and Tolado Edison Company?
	9		Yes.
1	0		And those involved calculations on paper?
1	11		Yes.
1	12		And were those calculations turned over to
1	3 th	a Applic	ants?
1	4	A	
1	5	Q	Are the industrial rates offered by utilities
1	6 ir	fluenced	in any manner by the desire of utilities to
1	7 at	tract in	dustrial customers?
1	8		MR. SMITH: Mr. Charno, if you are doing that
1	9 fc	or my ben	afit, I appraciate it, but I'm happy with the
2			way it is now.
2	1		I don't see a need for it.
2	2		MR. CHARNO: I will withdraw the question.
2	3		BY MR. CHARNO:
2	4	Q	Mr. Kampmeier, I ask you to assume as a
			al that you were hired as a consultant for an

	6134
1	isolated generating municipal system. If you invectigated
2	the availability of bulk power at wholesals from a
3	surrounding utility, would the existence of a potential
4	price squeeze, coupled with the inability of the system
5	to operate compatitively in isolation, be sufficient to
G	cause you to recommend that that utility go out of the
7	distribution business entirely and to allow its customers
8	to become ratail customers of the surrounding utility?
9	MR. REYNOLDS: You want to read that beck?
10	(Whereupon, the reporter read the
11	pending question, as requested.)
12	MR. REYNOLDS: Could I have some clarifica-
13	tion as to what counsel means by the existence of a
14	potential price squeeze?
15	MR. CHARNO: I will withdraw the question and
16	start over.
17	BY MR. CHARNO:
18	Q Let us assume that you are hired by an
19	isolated generating municipal system, and you are hired
20	to explore bulk power supply alternatives.
21	If you determined, number one, that that system
22	could not be competitive with the surrounding bulk power
23	supplier by remaining isolated and depending upon its
24	own generation and you determined, number two, that if
25	that system were to become a wholesale purchaser from the

1.1	
1	surrounding utility, that it would be subjected to what
2	you had previously described in your testimony as a
з	price squeeze; would this combination of factors cause
4	you to recommend to that system that rather than remaining
5	isolated or purchasing bulk power at wholesals, it should
6	sell its system to the surrounding utility and allow its
7	customers to be served at retail by the surrounding
8	utility?
9	MR. REYNOLDS: Could I get a clarification
10	by counsel, when he says "remain competitive," compatitive
11	as to whom? And also when you say "potential price
12	squeeze," price squeeze as to which customers?
13	CHAIRMAN RIGLER: While Justice is reflecting
14	on that, let's not waste time. Isn't the answer going
15	to depend on the severity of the price squeeze, no matter
16	to whom it is applied, and also the compensation for the
17	system, so there is no answer?
13	THE WITNESS: I would say like a lot of
19	hypothetical questions I have been asked, I would need
20	to make some more assumptions.
21	BY MR. CHARNO:
22	Q Is it possible to be subject to a rate
23	squeeze and still sell power to an industrial customer at a
24	lower price than your supplier can sell power to that
25	industrial customer?

ar3

-----

s	61.36
1	MR. FEYNOLDS: I thought he said rate squeeze.
2	I don't know what he means by rate squaeze.
5	MR. CHARNO: I think the witness testified
43	as to what he meant by rate squeese, and that is
5	what I'm referring to.
6	CHAIFMAN RIGLER: Rate squeeze or price squeeze?
7	MR. CHANNO: They're identical.
3	THE WITNESS: It may not be likely, but it is a
9	possibility. If you have got an efficient, exceptionally
10	well managed distribution system, and your distribution
11	costs are favorable, then it is possible, and I know of
12	more than one instance where it has happened, that the
13	distribution system pays an unduly high rate which
14	represents a price squeeze, and still undersells the system
15	from whom it is buying power.
16	BY MR. CHARNO:
17	Q Is that in the CAPCO area?
18	A Well, let's see if I I was thinking of other
19	situations. Let me think about the CAPCO area a minute.
20	Yes, I think companies can be found in
21	the CAPCO area, probably, too. I would have to examine
22	the operating records over a longer period of time than
23	I have to satisfy myself that this is a systemable
24	situation.
25	MR. REYNOLDS: I move to strike the answer
1	

	6137
1	to the extent it made reference to the possibility
2	it could exist in the CAPCO area based on the following
з	portion of his response.
4	MR. CHARNO: Maybe I can ask a few clarifying
5	questions and refresh the witness' recollection.
6	MR. REYNOLDS: I have no problem with that, but
7	I still move to strike that answer to the extent it relates
3	to the CAPCO area.
9	CHAIRMAN RIGLER: I will strike it and you can
10	rephrase it.
11	BY MR. CHARNO:
12	Q Sir, do you recall being given a copy of the
13	testimony of the manager of utilities of Ellwood City,
14	Pennsylvania?
15	A Yes.
16	Q In that testimony do you recall any statement
17	of the relationship between the rates paid by Ellwood
18	City and the rates that utilities industrials that
19	purchase their power from Ellwood City's supplier paid?
20	A Yes, I remember the circumstances guite well
21	and the situation is one which fits the sort of case you were
22	asking about.
23	MR. STEVEN BERGER: Could I ask whether or not
24	Mr. Charno is referring to the testimony of Mr. Urian,
25	and if he is, I would like a page reference.

State of the second sec

ar6	
	6138 MR. CHARNO: We will supply that, and I'm
1	
2	referring to Mr. Urian's testimony.
3	MR. STEVEN BERGER: Are you stating now as the
4	basis for asking this question that Mr. Urian testified
5	to a price squeeze?
5	MR. CHARNO: I'm stating that he tastified to a
7	relationship between rates which, if I can remember the
8	witness' definition, I think would be a price suggeze.
s	MR. STEVEN BERGER: I recall Mr. Urian
10	testifying as to a relationship between rates. I don't
11	recall Mr. Urian testifying to a price squeeze.
12	MR. CHARNO: If you are asking me did he use
13	that term, no, I don't believe he used that term.
14	MR. REYNOLDS: Go ahead.
15	MR. CHARNO: Then I have no problem with that.
16	BY MR. CHARNO:
17	Q Did you testify that the system peaks of the
13	individual CAPCO member companies are closely parallel
19	or comparable to the peaks of industrial companies within
20	those systems industrial customers within those
21	systems?
22	A In terms of time of day?
23	Q Yes, sir.
24	A Yes, I testified that by and large the peaks on
25	each of the CAPCO companies occurs during hours when

а

----

r7		
		6139
	1	industrial loads are likely to be high.
	2	Q Are municipal loads in the CAPCO area
	3	less likely to coincide with the system peaks of
	4	individual CAPCO companies than the industrial customers
	5	those companies serve?
	6	A Yes, they are.
	7	Q Does this have any influence relative to the
	8	cost of serving industrial customers as opposed to
	9	municipal customers?
	10	A Yes, it means that this is a factor which lowers
	11	the cost of serving the municipal customers compared to the
	12	cost of serving industrial customers.
	13	Q What was the basis for your statement today
	14	that the question of whether the issue of wheeling is in
	15	the public interest was being litigated?
	16	A I was recalling the Otter Tail case
	17	which went through a series of steps. The last I recall was
	18	that the case was settled on appeal except for one
	19	point which was referred back and to the best of my
	20	recollection, as far as I can recall, that point had not
	21	been disposed of.
	22	Q Sir, would you characterize the agreements
	23	between CEI and Painesville and between CEI
	24	and the City of Cleveland as "complete coordination"
	25	agreements as you have used that term in your testimony

ar8	5140
1	today?
2	A No, they would be far from that.
3	Q Do these two agreements contain unique and
4	complex items that were hammered out for the first
5	time in the CAPCO area in the context of those agreements?
6	A No, I think not.
7	Q Earlier today you testified with respect to a
8	description of CAPCO and you indicated that this was not
9	an adequate description of the reserve sharing principles
10	of the pool.
11	I would like to give you that description
12	again and ask you why not. It is the brackated portion
13	on that page.
14	A Yes, this was the one that was read to me a
15	couple of times. The key reason I consider it inadequate
15	is that it does not call attention or note at all
17	MR. REYNOLDS: I can't hear what you are saying.
18	THE WITNESS: I'm sorry. I backed up from
19	the mike. I'm sorry.
20	It does not call attention to or in fact
21	mantion at all the one thing about that reserve sharing
22	arrangement which really makes it unique and that is that
23	the total requirements, reserve requirement for the pool,
24	are allocated on a basis which gives considerable weight to
25	what the participant's situation would be individually

-----

	6141
1	if operated in isolation which I have mentioned. I think,
2	is beside the point, and which is not normally done,
3	and which unless mentioned, I think, leaves the reader less
4	than adequately informed as to the nature of these
5	reserve sharing arrangements.
6	BY MR. CHARNO:
7	Q Sir, at one point you testified that there
8	were additional differences between the rate schedules
9	which apply to industries and the rate schedules which
10	apply to municipal wholesale customers that you had
11	examined.
12	Could you tell us what those additional differences
13	were?
14	A Yes, I think, very quickly.
15	The I was referring particularly to the
16	rates of Ohio Edison and Pennsylvania Power, and they
17	provide in the well, first in the rates to municipalities,
18	that the demand charge is based upon the highast demand
19	during any 30-minute period of the month.
20	The industrial rate, however, provides that
21	the billing demand is based not on the demand during the
22	30 minutes of highest demand but the average of the highest
23	and the second highest 30-minute demands.
24	This gives a rather significant, in many cases
25	fairly substantial discount in effect to the industrial

customers.

2	Secondly, in the same saction dealing with
3	billing demand, in the case of a demand which was
A,	established after certain hours, 8:30 p.m. in the summertime
5	in the case of Pennsylvania Power, and 9:00 p.m. summer or
6	winter in the case of Ohio Edison, these are treated
7	this provision in the industrial rate which is not in
8	the wholesale rate and this provides that such a demand,
9	after that hour or before a specified hour in the
10	morning in effect is treated as an off-peak demand and that
11	off-peak demand could be up to twice as high as the demand
12	during other hours without increasing the demand charge.
13	If, for example, a system like the
14	municipal system of Cleveland which had its peak 1973 at
15	10:00 o'clock in the evening could buy power under
16	that sort of schedule, it would obviously be a considerable
17	advantage to it.
18	So this sort of a sp concession in the
19	industrial rate that doesn't appear in the wholesale rate
20	is an important difference.

end

-41

24

21

22

23

Q

A

0

Yes.

25

Did you reach any opinion as to the desirability

Mr. Kampmeier, you testified on cross-

examination that you had made yourself familiar with the

Applicant's proposed license conditions and Exhibit 44.

arll	5143
1	of those conditions?
2	A I did.
3	Q Can you tell us what conclusions you reached?
4	A I consider them quite unacceptable to the
5	small system.
6	Q Can you tell us why?
7	A I will try to make this reasonably precise.
3	There are quite a number of points I would like
9	to make.
10	First, the provisions do not include any
11	wheeling except for the very limited purpose of delivering
12	to the small system the power that it purchases from the
13	nuclear unit or power for replacement thereof. It makes
14	no provision, in other words, for wheeling in any other
15	power or wheeling out any of that power which power from
16	the nuclear unit which might temporarily be a surplus
17	to the system.
13	Secondly, without such a provision, and no
19	provision for the small system to be able to share in other
20	CAPCO units other than the nuclear units, the small system
21	would be unable to put together as the large systems do,
22	an appropriate combination of base load nuclear power,
23	intermediate load power from large coal-burning plants,
24	and peaking power from other sources.
25	Another point is that there is a lot of long

And and a second se

61.44 1 language in here which I believe would need to be 2 tightened up very considerably before the small system 3 could be at all sure that it might not be interpreted in 4 ways that the small system might have assumed it was 5 not intended, because there is a lot of room for ambiguity. 6 plus room for doubt as to who does the interpreting, who 7 makes the determination when parties fail to agree, and so 3 on. 9 This leads me to the point in regard to the matter of reserves. I can illustrate what I have been 10 saying by leading into the discussion on reperves by 11 quoting this sentence: 12 "The company and each participating entity 13 shall enter into an arrangement for reserves which shall 14 jointly establish the minimum reserve requirement to be 15 installed and/or provided under contractual avrangements 16 as necessary to maintain for each party," and let me under-17 score "to maintain for each party a reserve margin insufficient 13 to provide adequate reliability of power supply." 19 Now I think it is totally unclear, subject to a 20 lot of room for argument as to what that means. To maintain 21 for each party a reserve margin insufficient to provide 22 for adequate power supply under what conditions? Under

isolated conditions?

23

24

25

ar12

If so, there is no reserve sharing. You are

arl3	6145
1	back where you started; there is no indication it doesn't
2	mean that.
3	There is no indication what it means instead
4	of that. If it means that something other than
5	under isolated conditions, then you run into another
6	whole flock of questions about the reserve language. It
7	provides that if no agreement can be reached on the criteria
8	for determination of reserves and the participating
9	entities'minimal reserve requirements shall be determined
10	on the basis of two possibilities:
11	One, on the basis of the smallest resorve
12	requirement which company has agreed to under other
13	similar reserve arrangements, then in effect.
14	But in no event shall the participating
15	entities' minimum reserve be less than its largest
16	single block of nuclear capacity, and so on.
17	Now this last point, not less than its
18	largest single block of nuclear capacity, the undesirability
19	of that has been commented on by other witnesses. I don't
20	need to belabor the point further.
21	MR. REYNOLDS: I move to strike that portion
22	of his answer.
23	THE WITNESS: In that case, let me explain why
24	I think
25	CHAIRMAN RIGLER: Wait a minute. What other

arl4	6146
1	witnesses?
2	THE WITNESS: Mr. Hughes and Mr. Mozer, among
3	others.
4	CHAIRMAN RIGLER: Are you adopting their
5	testimony?
6	THE WITNESS: On this particular point, yes.
7	CHAIRMAN RIGLER: Objection overruled.
8	THE WITNESS: As undesirable as that
9	language is, and if it were not so late, I would have
10	preferred to spell out my own language and objections
11	to it I'm trying to save time by adopting other
12	testimony bad as that last provision is, it is not as
13	bad as the one before which says in the event agreement
14	can't be reached, that the reserve requirement shall be
15	determined on the basis of the sublest reserve requirement
16	which company has agreed to under similar reserve
17	arrangements then in offect.
18	Now how is that to be read? There are two
19	ways I can think of to read it.
20	One would be to say that that means the CAPCO
21	reserve sharing arrangement. I have expressed my opinions
22	as to why that would be unfair to the small system.
23	The other possibility is particularly if the
24	small system were to say, "I can't accept that, that is
23	not fair, you couldn't have meant that," then another

		/
ar15		6147
	1	possible interpretation of what this means is that you,
	2	Pitcairn or Cleveland or Oberlin or whoever, will be
	3	obliged to provide reserve requirements equal to Toledo
	4	Edison's because that is the smallest reserve requirement
	5	which has been agreed to under similar reserve arrangements
	6	in effect.
	7	Obviously this whole section on reserve
	3	arrangement in my opinion is totally unacceptable to any
	9	small system.
	10	Now I could go on. But I think maybe that is
	11	about enough. I would certainly want to add this: We
	12	have been talking quite a little about complete coordination
	13	arrangements.

25 question.	2.6	by the Applicants and I'm going to permit the
	25	question.

	i	THE WITNESS: Would you restate it?
w3	2	MR. REYNOLDS: I would like to note an exception.
	3	CHAIRMAN RIGLER: We have debated before
	4	whether there can be cross on cross.
	5	The Board thus far has allowed all parties
	ő	a turn to interrogate on new matters raised in cross
	7	or matters which they did not have a chance to address in
	8	their original corss which came up as the result of another
	9	party's cross-examination.
	10	MR. LESSY: I will start again.
	11	BY MR. LESSY:
	12	Q You have agreed that rates are established on
	13	the basis of average embedded costs, and that the cost of
	14	new genration and transmission would exceed average
	15	embedded costs.
	16	Now, with continued inflation, what is the
	17	direct effect of newly-constructed generation and trans-
	18	mission on the utility's rates?
	19	A It leads to increases in the rates.
	20	Q Could a full requirements wholesale customer
	21	by acquiring an ownership interest in a nuclear plant be
	22	able to protect itself against such rises in rates in
	23	the future?
	24	A Yes, it could, to that extent.
	25	Q Could a full requirements wholesale customer

by

The second secon

	1	
/4	7	also protect itself against such such rise in rates in
	2	the future by having the option of seeking alternative
	3	sources of bulk power supply through wheeling?
	4	A It would certainly help to protect hinself,
	5	yes.
	6	Q Did you say a full requirements whole ale
	7	customer with no options of either wheeling or reasonable
	3	ownership in large units have any rate protection against
	9	either poor planning, excessively high construction costs or
	10	excessively high construction costs by his wholesale
	11	supplier?
	12	A No, not really.
	13	Q Finally, the last question, you testified
	14	taht rates take account of all customers in a particular
	15	class.
	16	Who determines the class of customers?
	17	A. The utility who is establishing the rates.
	18	MR. LESSY: That concludes Staff's
	19	, examination.
	20	MR. HJELMFELT: I have no questions.
	21	MR. REYNOLDS: Can we take a ten minute
	22.	break?
	23	CHAIRMAN RIGLER: Can you make it five?
	24	(Recess.)
	25	

bw.

1	BY MR. REYNOLDS: Q Mr. Kampmeier, where did you say that the Central
2	Q Mr. Kampmeier, where did you say that the Central
- 11	
3	Electric Power Cooperative, Inc., was located.
4	A North Dakota, Minot, North Dakota.
5	Q Ed you know why it is that the annual
6	statistical report for the rural electric borrowers of 1974
7	indicates that that entity is located in South Carolina and
B	is system lease-operated by the South-Carolina Public
э	Service Authority?
10	A You are sure you are not looking at Central
11	Power Association?
12	Q Let me show what I'm referring to and see
13	whether maybe we are talking about two different things?
14	A Well, excuse me, in the first place the
15	name of the one in NOrth Dakota is Central Power Electric
16	Cooperative.
17	I probably didn't listen that closely enough.
18	I have been using that name so often I assumed that is what
19	you were referring to. North Dakota Cantral Power Electric
20	Cooperative, you will find the one I'm talking about. It
21	seems like a backward way to sign the sequence of words in the
22	name, but that is what they chose to do.
23	Q That one indicates that the one we are talking
24	about is located in South Carolina; is that correct?
25	A This one is located in South Carolina, and it is
summer of	

	6153
1	referred to in its own contracts as Central Power
	Association, But Cantral Electric Power Cooperative, I
2	will accept. It is not Central Power Electric Cooperative,
3	though, which is in North Dakota.
4	Q That indicates that the Cooperative there is lease-
5	operated by the South Carolina Power Authority; does it
6	not?
7	A No, that is not correct. The only thing
8	lease-operated by the SC Public Service Authority is the
9	generating plant of this Cooperative.
10	None of the rest of it I shouldn't say none.
11	Generating plant and certain lines. The marketing operation
12	and much of the, certain of the other facilities are not
13	lease-operated.
14	Q Will you read the footnote there for mo?
15	A The footnote says system lease-operated by
16	SC Public Service Authority.
17	I'm telling you that is not correct.
18	Q. I see.
19	Let me show you a copy of the transcript of
20	Mr. Urian's testimony which was referred to and ask
21	you if page 4973 is the portion you were referring to, when
22	you indicated that some testimony on Ellwood City related
23	to a relationship between industrial rates and wholesale
24	rates?
25	A Not just this one page. There is some reference

-----

1	as to the sort of revenue margins that Ellwood City
2	has, and so on.
3	Those were all part of what I was referring to.
4	MR. REYMOLDS: Mr. Charno, you want to indicate
5	to me what page you showed him?
6	MR. CHARNO: I didn't indicate any pages.
7	MR. REYNOLDS: You reviewed the whole transcript
а	and reviewed portions of it?
Э	THE WITNESS: I don't think I read the whole
10	transcript. I read anough it to get a picture.
71	BY MR. REYNOLDS:
12	Q Is the picture you got from that testimony
13	a price squeeze situation in the City of Bllwood?
14	A In the terms which I was describing, namely,
15	of the City being obliged to pay Pennsylvania Power
16	more for power than if it were able to buy power at
17	Pennsylvania Power's industrial rate.
16	Q That came solely from Mr. Urian's testimony?
19	A No, I can't say whether it came solely
20	from that or not. We have had a lot of discussions with
21	Counsel and some of the other people, and I don't recall.
22	I have looked at a lot of statistics. Ellwood
23	City filed a form one or form twelve report or both, I have
24	forgotten which, with FPC, as I recall, which I looked
25	at, and I can't sort out any more which piec e of the

-----

bw8	6155
DW8	background I got from which source.
2	Q This is the same municipality you indicated
3	contributed more to its general fund than any other than
4	the CAPCO area; is that right?
5	A Yes.
6	Q Is it your testimony, Mr. Kampmeier, that it is
7	the utility that establishes the class of customers?
8	A That was my testimony. I don't know. if that
9	needed minor qualifications, but by and large that is the
10	way it works, yes.
11	Q Doesn't the Federal Power Commission and the State
12	Commission of each state have the responsibility of
13	determining that the class is appropriate?
14	A They review and approve the rates, but it
15	is a rare occasion and I'm not sure I can remember anywhere
16	the Commission has said to a utility that you have to either
17	combine certain clases or break up certain clases.
18	This is no reason my elaborating, but I
19	would be glad to, if you want me to.
20	
21	
22	
23	
24	
25	

ES42

	0230
1	Q Are you aware of any litigation where a customer
2	has challenged its particular classification by the
3	utility either before the FPC or a state regulatory
Ą	commission?
5	A Yes. I'm not familiar with any in the CAPCO
Ð	area, but I'm familiar with some in some other places.
7	Q All right.
8	If MELP or any other municipality in the CCCT
9	area were to buy a share of ownership in the Perry Unit,
10	how is MELP or how are those municipalities going to be
11	protected against the poor planning or the high construc-
12	tion costs of the utility responsible for the design,
13	construction, and operation of that unit?
14	A They are not going to be very well protected
15	unless they have some voice in the process of coordinated
16	planning and development and can assure themselves that
17	only proper steps are being taken to assure good, efficient,
18	engineering design and construction, and so on.
15	If they can't so satisfy themselves, then
20	they probably wouldn't want to be involved.
21	Q If a wholesale customer buys a piece of capacity
22	and then as its load grows, it continues to buy
23	participation in new capacity to meet that load growth
24	and assume that marginal costs continue to increase and
25	continue to remain above average costs, wouldn't the resulting

#43

arl

\$156

ar2	6157
1	costs always be above the average system costs to the
2	wholesale customer had they remained as a wholesale
3	customer?
4	A I would have to make a number of assumptions
5	to answer that. I will stop there for the moment.
6	Q What other assumptions would you have to make?
7	A Well, I would have to make some assumptions
8	as to the conditions were going to determine the price
9	it would pay for wholesale power, for full requirements
10	customer, how well that reflected the regulatory process.
11	I would have tomake some assumptions as to
12	whether the purchasing system, like the wholesaling
13	system, starts off with some capacity of its own or some
14	source of power of its own with low imbedded costs, to
15	which the first purchase of nuclear capacity is an
16	addition and so on.
17	Q Let's try it this way: Let's make two
10	assumptions:
10	The one assumption is that the wholesale
20	customer buys capacity to meet its load growth at
21	the incremental cost of new capacity. And assume that
22	on the other alternate, the wholesale customer buys
23	his wholesale power at the average imbedded costs and
24	then assume that marginal costs continue to increase and
25	remain above average costs.

	7-18	
,	1	Now, on that basis, wouldn't it always be the
	2	case that the wholesale purchase of power would result
	3	in a lower cost than the cost of ownership?
	4	MR. CHARNO: I object to that question
	5	because, at least two more parameters being specified on
	5	the ground it is unclear.
	7	One, the available or lack of available, both
	3	to the supplier and wholesale customers of alternative'
	9	power sources and two, whether the wholesale customer
	10	and supplier have identical rates of growth and
	11	therefore will have identical incremental acquisitions
	12	of generation.
	13	The question is meaningless without those two
	14	parameters.
	15	MR. REYNOLDS: I don't think you need either
	16	one of those for the purposes of answering the question,
	17	but if you feel otherwise, let's say the rates of
	10	growth are identical and that there are no other
	19	alternative sources of power.
	20	THE WITNESS: I was going to ask about two more
	21	assumptions. How do you start in the case of buying these
	22	blocks of capacity? Are you starting with a system
	23	that is generating its own power at this point, and
	24	therefore has enough generating capacity to meet its load
	25	until it takes care of an increment of that growth with

ar4	6159
1	this first purchase of a block of nuclear.
2	MR. REYNOLDS: Start from the situation where
3	you are a wholesale customer and the purchases of the
4	blocks of power are additions to where you are at the
5	particular time you start to make the purchases.
é	THE WITNESS: In either case you are buying
7	all of your requirement to begin with. In the one case
8	you continue to buy your growing requirements.
9	In the other case, you get your growing
10	requirement out of unit purchases of capacity.
11	BY MR. REYNOLDS:
12	Q That's right.
13	A Now the second assumption, I take it you
14	said, I'm sure, but I want to be sure this is what you
15	meant, that the assumption is that the price for
16	wholesale power will be no more than enough to cover original
17	imbedded costs. There is no profit in the sale of
10	wholesale power.
10	Q That's right.
20	A In that case, the answer is I have forgotten
21	whether it is yes or no but the answer is that
22	the costs will be less if you buy additional wholesale
23	power than if you buy successive blocks of capacity.
24	With one further proviso: I keep thinking of things
25	that is still not necessarily accurate. It still leaves

ir5	
1	6160 the question about differences in fixed charges.
2	The municipal system presumably is the
з	beneficiary of a long established policy that it can
4	finance with bonds that are in which the interest is
5	not subject to income taxes. This effect could be
6	sufficient to outweigh the other effects.
7	Unfortunately these kinds of questions take a
8	lot of elaboration and assumptions.
9	MR. REYNOLDS: I don't have anything further.
10	MR. CHARNO: No redirect.
11	CHAIRMAN RIGIER: All right. Thank you very
12	much, Mr. Kampmeiez.
13	(Witness excused.)
14	CHAIRMAN RIGLER: Mr. Hjelmfelt, have you
15	reviewed the depositions with the Department of Justice,
16	and does the five-inch pile I have represent a consolidated
17	pile?
10	MR. HJELMFELT: With the exception of about
15	three depositions that the Department of Justice did not
20	want to introduce, and I may or may not seek to introduce.
21	CHAIRMAN RIGLER: If you do, you would not
22	introduce the entire deposition?
23	MR. HJELMFELT: That's correct.
24	CHAIRMAN RIGLER: But a select number of pages?
25	MR. EJELMFELT: That's correct.

a

----

<b>r</b> 6	6161
1	CHAIRMAN RIGLER: You are talking about less
2	than half an inch, I suppose?
3	MR. HJELMFELT: Possibly, yes. I would
4	want to review it again.
5	CHAIRMAN RIGLER: All right, thank you.
6	We will begin at 9:30 tomorrow, and I think
7	maybe we will break about 1:00 o'clock for the day for
8	those of you who want to make transportation plans.
9	(Whereupon, at 6:10 p.m., the hearing
10	was adjourned, to reconvene at 9:30 a.m.,
11	Friday, March 5, 1976.)
