Gentlemen:

SUBJECT: RADIOLOGICAL SAFETY REVIEW

We have established a schedule for our radiological safety review of your application for operating licenses for Midland Plant Units 1 and 2. The more important milestones are summarized in Enclosure 1.

Enclosure 1 provides 20 months from docketing to issuance of our supplement to the Safety Evaluation Report. Our target milestones assume timely submittal of responses to our request for additional information that was enclosed in our acceptance review letter of November 11, 1977, and your adherences to dates stated in your FSAR and security plan. We have scheduled issuance of our subsequent (Round-one) requests for additional information, and your responses, in three separate parts to enhance our review of those matters as may be identified early in our review. Should target milestones change as the review process proceeds, we will advise you of significant changes to our schedule.

Since many of the milestones of the staff review require your input and participation, we believe you should critically review the dates indicated for these milestones and advise us of any inconsistencies with your activities and adjustments needed. Your comments should be telephoned to the Licensing Project Manager within about two weeks following receipt of this letter.
