Joseph M. Hendrie, Chairman
U.S. Nuclear Regulatory Commission
Washington, D.C.

Dear Sir:

How much more do we who live near TMI have to take? Didn't we endure enough during the accident?

I, my family, friends and neighbors strongly object to the proposed new release of radioactive gases into the atmosphere. Furthermore, we also do not want the radioactive water, even though it is supposed to be purified to a "safe" level dumped into the Susquehanna river from which we get our drinking water.

We live in constant fear of TMI, and know what has happened, and is still going on will affect our health and especially that of our young children.

Shut down TMI! We can live much better without it.

Sincerely,
Ingeborg Koppke
(Mrs. John)
