John F. Ahearne, Chairman
Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Chairman Ahearne:

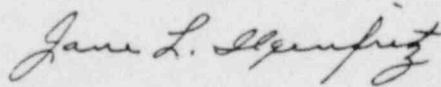

Except for a few radical groups, all leading scientists and nuclear experts have said that the accident at Three Mile Island did no harm to the public. I feel the news media has done more harm to the public. Yet the undamaged reactor at the Island has not been producing electricity since the day of the accident and we must pay the high cost of purchasing power from other sources. This is hurting the customers financially.

I am asking you to use your power to get Three Mile Island Unit 1 back in operation as soon as possible. We need the energy for our standard of living. I, for one, do not want to go back to oil lamps, ice box refrigerators, etc. There have been enough hearings, committees, and public meetings which are nothing more than anti-nuke rallies.

Also, vent the Krypton 85 gas and get it over with.

Thank you for your attention and consideration to my letter on this timely and very important issue.

Sincerely yours,

Jane L. Ilgenfritz
