General Comment

Because of the history of spills at the Westinghouse facility, and the likely future impacts to the environment, the NRC should conduct a full Environmental Impact Statement (EIS) before issuing a new license. Amen to that! I am not opposed to all nuclear concerns, but improperly managed nuclear type facilities can cause such catastrophic problems for environment and life that I feel they should be heavily regulated and reviewed. Westinghouse has a long list of issues over the years they have operated. They have not proven to be as tightly controlled procedure wise as they should be, and have a pattern of either not disclosing issues to the public, or not disclosing in a timely manner or disclosing full implications. I do not want to see the plant closed, but I also do not want it to continue operating in an unsafe, loosely regulated, dangerous and non-transparent manner. Based on past history of issues going back to the 80's, I do not think their operating license should be hand-stamped/renewed without a thorough review and investigation - a total "day of reckoning" before being allowed to continue in business. I live miles from the site, and am a frequent visitor to Congaree National Park. I just want safety for the area, the people.

Thank you for your attention.
