Subject: License Condition #11 of Our License No. SUA-917

Dear Mr. Garcia:

Condition #11 of the license states "The average mill throughput shall not exceed 850 MT of barrelled U-308 per year." We presume the year referred to in this condition is the license year, which started April 23, 1979, and this is a five year license renewal. We further assume "average mill throughput" means that we could, over the five year period of the license, average 850 metric tons or produce in that period a total of 4,250 MT. We have no plans to produce more than 4,250 MT in this five year period, but we could possibly produce more than 850 MT in a given year.

Would you please give us your thoughts on our interpretation of this license condition.

Very truly yours,

Gordon T. Swanby
