Dear Mr. Ahern,

This letter concerns the proposal to vent Krypton and other "unknown" radioactive gases from the crippled Three Mile Island Plant. Since the radioactivity will travel in the wind and enter the food chain as far away as my home in Connecticut, I demand that Hearings be held here in my state at least two weeks prior to any decision to vent the radioactive gases into the atmosphere. I firmly believe that it is a crime to experiment on people without their complete understanding or consent.

Sincerely,
Lisa Billings
