RECEIVED
1980 AUG 6 AM 11 12
U.S. NUCLEAR REG
NMSS MAIL SECTION

Dear Mr. Rothfleisch:

Re: Docket No. 40-8697
License No. SUA-1338
Pattern II Baseline Data and Analysis

Enclosed is a copy of the information you requested for Pattern II monitor wells at the Company's Reno Creek site. This includes the raw laboratory data obtained from baseline samples and the results of statistical analyses used to calculate Upper Control Limits. These data are the basis for the "Preliminary Water Quality" and "Preliminary Control Limit" tables presented in our July 25, 1980 letter.

Please note that computer printouts were not available for the tests performed using Chauvenet's Criteria. All data were hand transcribed from a computer television monitor. You can, however, verify our results if you use the following formula to remove outlying data:

$$\frac{|n-\bar{n}|}{s}$$

where: n is the suspected outlying data point;

$\bar{n}$ is the average of all data for a certain parameter and;

s is the standard deviation.

If the resulting value exceeds the theoretical values shown in the table below, the data point should be rejected.

P.O. #120-1194

2/28/80

REPORT OF ANALYSIS

Lab Designation	700-9685-2-1
Sponsor Designation	RC-M19

Determination (pCi/l)	
Uranium (as U), dissolved (mg/l)	0.019 .022 ± .08
Lead-210, dissolved ± Counting Error*	13 ± 4
Polonium-210, dissolved ± Counting Error*	1.4 ± 0.8
Radium-226, dissolved ± Counting Error*	13 ± 6
Thorium-230, dissolved ± Counting Error*	20 ± 2

*Variability of the radioactive disintegration process (counting error) at the 95% confidence level, 1.96σ.
