SUBJECT: AGES AND AVERAGE BURNUP FOR FUEL STORED AT MORRIS OPERATION

Gentlemen:

In response to a request by Tom Clark of your staff, and a telephone conversation between Mr. Clark and Harold Rogers of this office on June 30, we have enclosed information regarding ages and average burnup of fuel presently in storage at Morris Operation.

Ages and average burnup values for different batches of fuel are shown in Figure 1. Briefly, the data are based on fuel bundles from five reactors, both PWR and BWR, which vary in burnup from 300 to about 40,000 MWD/MT, in age from 19 months to 10 years, and in specific power from about 10 to 32 MW/MT.

Please call Harold Rogers (408*925-6496) if there are any questions about this subject.

Respectfully,

GENERAL ELECTRIC COMPANY
