Docket No. 50-336

Mr. W. G. Council, Vice President  
Nuclear Engineering & Operations  
Northeast Nuclear Energy Company  
P. O. Box 270  
Hartford, Connecticut 06101

Dear Mr. Counsil:

By letter dated February 23, 1980, you were requested to provide information regarding primary coolant system pressure isolation valves. The objective of this 10 CFR 50.54(f) letter was to identify those plants which have either or both of the valve configurations found in WASH-1400 (Event V) to be significant risk contributors to an intersystem LOCA which results in a core melt accident.

We have confirmed that the two specific Event V valve configurations do not exist at your facility. This is based upon the evaluation of your response to our February letter as well as the review of previously provided information (Enclosure). Based on this, our activities regarding these valve configurations have been finalized for your facility.

On 10/10/54, the following information was received from the Bureau of the Census, Washington, D.C.:
