Subject: Cancellation of Davis-Besse Plant Control Center Project

Gentlemen:

The purpose of this letter is to inform the Nuclear Regulatory Commission (NRC) that Toledo Edison has no further plans for development of a Plant Control Center (PCC) at the Davis-Besse Nuclear Power Station.

During 1985, Toledo Edison began examining the possibility of developing an additional Emergency Response Facility within the Davis-Besse site protected area. The proposed PCC was to serve several functions. One function would have been to enhance management's in-plant response to transients and emergencies. Normal functions would have been to serve as a conference room for senior plant management and Systems Engineering, as well as an office for the Shift Managers. Additionally, it was being designed such that, if necessary, the PCC could have fulfilled some of the Technical Support Center requirements of Supplement 1 to NUREG 0737.

Recently, Toledo Edison completed a further investigation into the need for a facility at Davis-Besse such as that described above. Based on current facility capabilities and other planned improvements, Toledo Edison has concluded that the PCC project is unnecessary. Davis-Besse will continue to meet the needs and requirements of Emergency Preparedness with existing site facilities.

Should you have any questions or require additional information, please contact Mr. R. W. Schrauder, Nuclear Licensing Manager, at (419) 249-2366.

Very truly yours,

AVA/ssg
