Trojan Nuclear Plant  
Docket 50-344  
License NPF-1

U.S. Nuclear Regulatory Commission  
ATTN: Document Control Desk  
Washington DC 20555

Dear Sirs:

License Change Application 187

Attached is one signed original of License Change Application (LCA) 187 requesting amendment of Operating License NPF-1. This LCA modifies the Technical Specification requirements for steam generators to allow tube repair by sleeving as an alternative to plugging. Portland General Electric Company requests that the Nuclear Regulatory Commission review and approve this proposed license change by March 10, 1990.

Enclosed are technical reports prepared by Babcock and Wilcox, Bechtel-KWU Alliance (Universal Testing Laboratories) and Combustion Engineering, Incorporated, describing the sleeving repair processes which will be used. Since these reports contain information proprietary to these respective owners, authorization letters and affidavits are provided as Attachments C, D and E. The affidavits set forth the basis on which the information may be withheld from public disclosure by the Commission and specifically addresses the considerations listed in Paragraph(b)(4) of Section 2.790 to the Commission's regulations. Accordingly, it is respectfully requested that the enclosed technical reports be withheld from public disclosure in accordance with Title 10 of the Code of Federal Regulations, Section 2.790.

Please note that the Babcock and Wilcox Report addresses sleeving only in the tube sheet region of the steam generator. A revised report will be submitted in January clearly indicating changes that incorporate sleeving in the tube support plate regions.
