Nuclear Reactor Regulation

Reference: License DR-10, Amendment No. 1
Docket 50-183

Dear Mr. Michaels:

Amendment No. 1 to License DR-10, Docket 50-183, authorized General Electric to possess, but not to operate, the deactivated ESADA-Vallecitos Experimental Superheat Reactor (EVESR). One of the conditions of the license requires an annual report to be submitted within 60 days after the annual inspection is completed.

By tying the submittal date to the date of the annual inspection the situation may easily arise where the annual report must be submitted before the end of the calendar year. This could occur when, because of holidays late in the year, it becomes necessary to schedule the inspection earlier than 60 days before the end of the year. GE requests that License DR-10 be amended to simply require an annual report. This would assure a consistent period, i.e., a calendar year, for each annual report. This change would make License DR-10 consistent with site reactor licenses R-33 (Docket 50-73) and TR-1 (Docket 50-70).

Specifically, GE requests that condition 2.E.2. of License DR-10 be amended to read:

- 2.E.2. An annual report of the status of the deactivated facility including the results of the surveys of radioactivity levels.
