Mr. John Ahearne
Nuclear Regulatory Commission
1717 N.W. H Street
Washington D.C. 20555

Dear Mr. Ahearne:

Cook, Stolowitz and Frame is a California based firm which designs marine storage and transport systems for liquified gases.

We are currently working up design concepts for a submarine liquid gas transport system, and, while we do not intend to build the power plant for such a vessel, it would be quite valuable to us to know the requirements and regulations for marine nuclear power plants for commercial applications. This would aid us in the development of a vessel around the constraints of the power plant. We would contract for the power plants to be built by other companies such as Westinghouse.

We are also interested in all information pertaining to the licensing of commercial marine nuclear vessels.

Correspondence should be addressed to my attention at 1061 S.W. Washington #206: Corvallis, Oregon 97330, where I am currently working on patent applications on engineering design modifications relating to our systems.

I look forward to your reply.

Respectfully,

Sid Cook
