Gentlemen:

I was happy to learn from our conversation of September 29, 1980, that you have started formal review of our topical Report No. YORK 80-67459. This is extremely important to the Otto H. York Company, Inc., as well as our customer, since this equipment is scheduled for installation in a power plant that has already been licensed. If we do not ship the mist eliminators in the near future, the project will be delayed or we will forfeit our order.

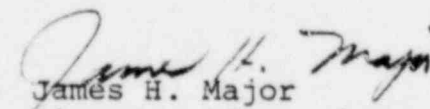

While this project may not be high on the NRC priority list, it should be noted that we are a small business, and this project will effect us greatly. We have covered the expense of the testing program, and we are counting on this order for a partial recovery of this expense.

In addition to meeting the required separation efficiency, the test has demonstrated that the Demister® operates at a lower pressure drop, which is an improvement for the user.

Please let me know if we can be of any assistance in any way. Your continued support will be greatly appreciated.

Very truly yours,

OTTO H. YORK COMPANY, INC.

James H. Major
