APR 4 1973

Docket No. 50-10

Mr. Jacob D. Dumelle
 Illinois Pollution Control Board
 309 West Washington Street, Suite 300
 Chicago, Illinois 60606

Dear Mr. Dumelle:

We have reviewed your letter dated March 7, 1973, to Chairman Ray and had previously reviewed the report of Dr. Tsivoglou to which you referred.

Our evaluation of radioactive effluent releases at the operating Commonwealth Edison nuclear power stations has been and is being performed on a continuing basis. Since promulgation of the changes to Parts 20 and 50, Title 10 of the Code of Federal Regulations, which clarified the intent that effluent releases be maintained as low as practicable, we have initiated evaluations of off-gas treatment at each of the Commonwealth Edison stations. The first Commonwealth Edison operating station for which a review was completed was Quad-Cities Units 1 and 2. By letter of February 16, 1973, to Commonwealth Edison, we concluded that the off-gas treatment system presently being installed at the Quad-Cities Station is acceptable. A similar review is nearing completion for the Dresden Units 2 and 3. We are now concentrating our attention on the Dresden Unit 1 which is the smallest of the five Commonwealth Edison operating units. The review of the Dresden Unit 1 radioactive waste system will be accomplished to assure that effluent releases will be at a level which is as low as practicable within the purview of the Commission's current guidelines on such releases.
