SUBJECT: License Amendment Application on Seismic Monitors

Dear Dave:

Enclosed are revised Tables 3.15 and 4.15 to reflect the actual installation planned for Peach Bottom. A description of the triaxial response-spectrum recorder follows:

The time-history recordings of the triaxial time-history accelerographs are done in the cable spreading room on a digital cassette accelerograph. In addition to being recorded, the containment foundation sensor is analyzed on line by a response spectrum analyzer. The spectrum of any sensor can be obtained by playing back its time-history cassette through the response spectrum analyzer.

Very truly yours,

W. M. Alden
Engineer-In-Charge
Nuclear Section
Generation Division
