

value of 44,132 curies. Since the values of initial Reactor Building activity are bounded by the values of the vented activity, the discrepancy between the two values is resolved.

4.4.2 ENVIRONMENTAL MONITORING

Off-site monitoring of the Unit II containment purge began on June 28, 1980, and terminated July 11, 1980. Data collected from the mobile monitoring teams, fixed station Krypton air sampler locations, TLDs, and the REM samples will be reported later in 1980, as required.
