Gentlemen:

Your letter dated June 30, 1980, concerning extension of the existing Waste Storage Building to provide a facility for recertification of UF₆ cylinders has been received and appropriately filed. As we understand the operation, the UF₆ cylinders will be washed by an offsite contractor before being brought in for test, so that radiological concerns would be limited to residual activity. Further, we agree that the proposed construction is covered by your existing environmental report and the activity may be conducted without a license amendment.

Sincerely,

R. G. Page, Chief
Uranium Fuel Licensing Branch
Division of Fuel Cycle and
Material Safety
