Gentlemen:

The Commission has issued the enclosed Amendment Nos. 10 to Facility License Nos. DPR-2 and DPR-19 and Amendment No. 9 to DPR-25 for Units 1, 2 and 3 (respectively) of the Dresden Nuclear Power Station.

Each amendment authorizes you to receive, possess and use up to 21 curies of cesium 137 in the form of sealed sources for radiation monitoring equipment to be used in connection with operation of the facilities. The amendment to License No. DPR-2 also adds antimony 122-124 and americium 241 which is used in connection with operation of Dresden Unit 1, but previously licensed under the byproduct material license. These amendments are in response to your application dated April 23, 1975. Note that we have retained quantity limits for the antimony and americium.

Byproduct Material License No. 12-05650-01 is not being amended at this time to delete the materials transferred to the reactor licenses inasmuch as we anticipate cancellation of this license at such time as we have received and completed our review of your application to be filed in accordance with our letter dated January 29, 1975, on this subject.

Copies of the related Safety Evaluation and the Federal Register Notice also are enclosed.

Sincerely,

Original signed by *DLZiemann* *from when he saw it.*
Dennis L. Ziemann, Chief *and it is consistent with what we are doing.*
Operating Reactors Branch #2 *he has not*
Division of Reactor Licensing *problem with this matter.*

⊗ On 6-19-75, I talked with D. Swanson to see if he had any problems with the fact that we have double licensing (byproduct lic & byproduct lic). He said that we were not changing SER.
