RE: Proposed Rule: 10 CFR Part 20.301, 20.303, 20.305, and 20.306
Docket No. PR 20 (45 FR 67018)

Dear Secretary:

We would like to endorse the Commission's proposed rule to allow NRC licenses to dispose of liquid scintillation media and animal carcasses containing less than 0.05 microcuries of H-3 and C-14 per gram without regard for their radioactivity. We believe that this is an acceptable and responsible approach toward the disposal of dilute amounts of H-3 and C-14 waste which are generated in medical research programs.

Sincerely yours,

Roy C. McCracken

ROY C. McCRACKEN
Director
