

TP 710-1

(83)

DOCKET NUMBER

PROPOSED RULE

PR 30,32,70,150
45 FR 70874

December 2, 1980

TO: United States Nuclear Regulatory Commission
Office of Public Affairs
Washington, D.C. 20555

FROM: Agnes Peters
621 Lockwood Drive
Richardson TX 75080

I am AGAINST the proposed licensing requirement exemption for contaminated smelted alloys. (Commission Regulations, parts 30, 32, 70 and 150) as published in the Federal Register, October 27, 1980.)

I am AGAINST the use of contaminated steel, copper, and aluminum in everyday household items and etc. After the exposure regarding the effects of asbestos, I feel even more strongly about this. We DO NOT NEED even one more questionable "ingredient" introduced into our everyday lives. And the alloys in this case would seem to be even WORSE than just questionable.

DO NOT allow this use of these contaminated products UNLESS by a NATIONAL REFERENDUM we, the American Public, vote in favor of having yet another potential carcinogenic become a part of our everyday lives... YOU KNOW such a proposal would be VOTED DOWN.

I am AGAINST this proposal, "WE" are against it, and YOU should be too.
