Mr. John F. Ahearne
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

December 21, 1980

Dear Mr. Ahearne,

I continue to read how
unsafe the proposed flushout at
Commonwealth Edison's Dresden I
reactor is. The experimental flush-
out which would end with the
contaminated used solvent being released
into the air or water can not be
passed off lightly, rather all of man-
kind's future is effected.
A full public hearing on the

DEC 23 1980

FINAL ENVIRONMENTAL STATEMENT
Concerning this proposed flushout
AND that Com. Ed. not be authorized
to proceed until after this public
hearing.

I am also shocked and
outraged by the proposed amendments
to Parts 30, 32, 70 and 150 of the NRC's
regulations. which allow scrap metal
contaminated by radioactive waste to
be "recycled" as uncontrolled metal
to the market place!

I want to scream - you
can't do this - to me, to my future
children, to all families everywhere
think very hard about it!

Sincerely,
Janice Widman
