Ref: SLNRC 80-47 dtd. 10/9/80: Subj. as Above

Dear Mr. Denton:

In the reference letter, SNUPPS transmitted to the NRC an uncontrolled copy of Revision 1 to the subject quality assurance program description. Revision 1 was prepared to reflect clarifications and agreements resulting from NRC review comments and was subsequently endorsed by NRC letter of Dec. 22, 1980 from Mr. Youngblood.

The purpose of this letter is to provide NRC, Attention, Mr. Haass, Chief Quality Assurance Branch, with Revision 2 to the subject program descriptions. The substance of this revision is as follows:

- o incorporates changes in the Daniel International Corporation Quality and Technical Services organization. These changes are intended to strengthen the function and independence of the Daniel quality effort and are applicable to the construction of Callaway and Wolf Creek plants. The substance of these changes were reviewed with NRR Project Management and Quality Assurance Staff on August 13, 1980.
- o clarifies project commitments as they relate to the procurement and acceptance of simple off-the-shelf items. These clarifications are intended to permit off-the-shelf, commercially-available items to be accepted on the basis of receipt inspections without need for supporting quality verification documentation or preaward evaluation.

A number of other minor changes are also included in Revision 2; these are limited to updating of organizational relationships applicable to the Wolf Creek unit. A similar updating is in preparation for Callaway. These modifications are minor in nature and neither detract from nor inhibit previous licensing or quality program commitments.

Boo! 3/10
