Reference: Docket No. 50-285

Dear Mr. Seyfrit:

Please find attached the Omaha Public Power District's update to the District's letter dated April 17, 1980, in response to IE Bulletin 79-01B and the Commission's Order for License Modification dated September 19, 1980. The attached information consists of two attachments. Attachment 1 is the actual pages either changed since the April 17, 1980, letter or added to the original submittal. Attachment 2 is a complete copy of the District's bulletin response, with all changes incorporated.

Significant changes to our response include new Enclosures 14 through 17 to address the District's positions on radiation qualification of equipment outside containment, qualification of NUREG-0578 equipment, the main steam line break analysis effects on qualification, and beta radiation effects on equipment, respectively. The individual data sheets have been revised to indicate additional qualification documentation received or correct typographical errors. Enclosure 12 has been changed to provide an update on the District's present aging program. Enclosure 13 has been revised to identify the two items that the District believes to be still open.

All changes either consolidate changes addressed in previous correspondence, but subsequent to the letter dated April 17, 1980, or address concerns from Supplement No. 3 to the bulletin or as discussed

with Mr. MacDonald of your staff. Accordingly, the District believes that the attached completely addresses IE Bulletin 79-01B and its supplements and should meet the Commission's criteria for performing its safety evaluation.

Sincerely,

W. C. Jones
Division Manager
Production Operations
