Docketing & Service Branch
Secretary of the Commission
Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Sirs:

I am writing this letter to voice my dissatisfaction with nuclear power plants. Since human error cannot be eliminated or controlled we should eliminate the nuclear power plants. As there is no harmless way to do away with the waste why keep producing a product that we cannot dispose of.

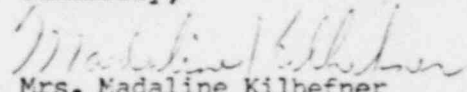

Now they want to dump water which someone says is okay, into the Susquehanna River. I just wonder if the people who want the nuclear power plants were to have to live beside them or have the waste buried in their back yards, if they still would favor such plants. We can't live for today only, we must consider the next generations.

Twenty years ago they used xray to treat some types of illness. Today they know that can cause cancer and no longer use this method of treatment. What will we find out about radioactive waste 20 years from now and wish something would have been done differently.

As far as TMI is concerned it appears to be one error on top of another. To a person such as I, who knows absolutely nothing about nuclear power, it would seem next to impossible for one plant to do so many things wrong.

To sum it up I believe we should phase out nuclear power plants and I do not want the waste water discharged in the Susquehanna River.

Sincerely,

Mrs. Madaline Kilhefner
