DOCKET NO. 50-219

AUG 22 1980

Jersey Central Power & Light Company
Attn: Mr. Ivan R. Finrock, Jr.
Vice-President
Madison Avenue at Punch Bowl Road
Morristown, New Jersey 07960

Gentlemen:

With your applications dated May 2 (Change Request 85) and August 7, 1980 (Change Request 91), filed with the Office of Nuclear Reactor Regulation (ONRR) for amendment of Facility License No. DPR-16, your Company submitted a total of two Class II fees (\$2,400). The applications proposed revisions to the Technical Specifications for your Oyster Creek Nuclear Generating Station to define the new management organization. Your August 7 application was stated to replace entirely the May 2 application. It is our understanding that the ONRR staff did not begin review of your May 2 application because they had been informed that this application would be superseded.

Based on information provided by the ONRR staff as a result of a preliminary review of your August 7 application, it has been determined that this application is more than administrative in nature in that the realignment of technical and managerial resources to form a new management organization for the facility is considered to have safety significance. On this basis, your August 7 application requires a Class III amendment fee of \$4,000. Since your Company has paid a total of \$2,400 (2 Class II fees), an additional sum of \$1,600 is due and should be remitted to this office. If the final review of your application by the ONRR staff indicates that this Class III fee is incorrect, an adjustment will be made.

Sincerely,

A handwritten signature in cursive script that reads "Reba M. Diggs".
