RECEIVED
NRC REGION IV

SUBJECT: Arkansas Nuclear One - Units 1 & 2
Docket Nos. 50-313 and 50-368
License Nos. DPR-51 and NPF-6
IE Bulletin 80-15
(File: 1510.1, 2-1510.1)

Gentlemen:

The following information is provided in response to IE Bulletin 80-15. Each response is numbered in accordance with the bulletin questions.

1. In compliance to your request, after receiving and reviewing the subject Bulletin, an inspection was made on June 27, 1980, to verify that our Emergency Notification System is powered using on-site power as described in the two enclosures of this I-E Bulletin.
2. Our ENS station packages are fed by an inverter which is backed up by a battery bank and a diesel generator.
3. A test was conducted to verify that all extensions of the ENS located at our facility remained fully operable from the facility to the NRC Operations Center upon a loss of off-site power to our facility.

This was accomplished by removing all A.C. power to the inverter.

October 22, 1980

4. Our Emergency Notification System is connected to an inverter which is backed up by automatic transfer to a battery and a diesel generator. Therefore, a twenty-four (24) hour notification to the NRC Operations Center was not required.
5. The Operations Department at ANO has prepared and issued a standing order #46, Rev. 1, which requires notification to the NRC Operations Center within one hour of the time that one or more extensions of our ENS located at our facility is (are) found to be inoperable.

As requested by the cover letter to the subject Bulletin, approximately twenty (20) manhours were expended to review, inspect and prepare this response.

Previous submittal of this information was made to you on September 3, 1980, in letter numbers 1-090-02 and 2-090-02. This response is being submitted in accordance with 10 CFR 50.54(f).

Very truly yours,

William Cavanaugh III

WC/GAC/lp
