Mr. Frank Ingram
Office of Public Affairs
Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Sir:

It has been nearly two years now since the accident at Three Mile Island nuclear station. There have been countless testimonies and endless discussions and yet your regulatory commission is still holding up the decision to restart the undamaged plant. The management of General Public Utilities Corporation has asked you for permission to restart the plant without any further delay but they have heard nothing from you.

The company is in severe financial difficulties, partly due to having to purchase outside electricity for customers that ordinarily would be serviced by the shut-down plant. The utility commissioners are also responsible due to the fact that they reduced the rate that GPU could charge the customers. They have used the so-called "accident" which killed or injured no one, as an excuse to lower the rates, claiming that the removal of the nuclear plant from operation justified them in reducing the rates even though GPU purchased outside electricity and kept supplying the customers at much greater expense to the company.

I have my life's savings invested in GPU stock. I have already lost over \$10,000.00 in dividends alone since the accident. Due mostly to the non-payment of dividends, GPU stock is worth only about twenty cents of the original dollar value. For the past year, we stockholders have had to supply electricity to the customers just as an accommodation. With interest rates at an all-time high we stockholders are not receiving one penny from our huge investments.

This ridiculous and un-called for situation must not be allowed to continue. You can do your part by cutting short those testimonies and discussions which have been going on for the past two years and give the go-ahead for re-starting the un-damaged plant. I have written your office before without result. Please give this urgent matter your prompt consideration.

Yours truly,

Jack A. Cantwell
