U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Sirs:

We strongly oppose the reactivating of TMI Unit II:

The people of Harrisburg and the environs of TMI have suffered enough. The future damage to the lives and descendants of these victims is incalculable. Surely, with all the wonderful harmless alternatives to nuclear energy (soft energy paths) we can say good-bye to this menace. Conservation alone saves more energy than these lethal exhausts.

The avowed function of the NRC is to protect people.

If this unit is opened it will violate this role and contribute to the further harm to the people in the area.

TMI Unit I and the two others should be shut permanently!

Sincerely,

Mr. & Mrs. Rubin Falk
