EVENT DESCRIPTION AND PROBABLE CONSEQUENCES 10

02 During normal refueling operations a release of I-131 approximately 30% in excess  
03 of ETS 2.3.B.2 occurred following filling of the refueling cavity. Release in  
04 excess of ETS limit was during a single 24-hour period on May 12 and 13, 1980. The  
05 event did not represent a significant hazard to the public health and safety.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS 27

05 I-131 evolution from reactor water in refueling cavity was released via the normal  
06 ventilation system to environment. Isolated normal ventilation and operated  
07 standby gas treatment to limit release. Covered cavity and fuel pool with tent  
08 and processed refuel floor atmosphere with charcoal filters. Procedure revisions  
09 and more frequent sample analysis should preclude recurrence.
