EVENT DESCRIPTION AND PROBABLE CONSEQUENCES															(10)																																																												
0 2	During Mode 1 operation, the "A" Core Protection Calculator (CPC) failed.																																																																										
0 3	The DNBR/LPD trips were by-passed on the "A" CPC channel per Action #2 of																																																																										
0 4	T.S. Table 3.1-1, placing the reactor trip logic in a two out of three trip																																																																										
0 5	sequence. The "B", "C", and "D" channels remained operable. Similar to																																																																										
0 6	LER 50-368/79-096 (Channel "C") and 79-075 (Channel "B"). Reportable per																																																																										
0 7	T.S. 6.9.1.9.b.																																																																										
0 8

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS															(27)																																																												
1 0	Investigation revealed cause of CPC failure to be a data link failure																																																																										
1 1	between the CPC channel and the CPC operator console. The defective data																																																																										
1 2	link card was replaced. The bypasses were removed and the CPC channel																																																																										
1 3	was returned to operable status.
