Mr. John F. Ahearne
Chairman Commissioner
U.S. Nuclear Regulatory Commission
1717 H. Street N.W.
Washington, D.C. 20555

Subject: Docket 50-2895P
TMI - Unit 1
Middletown, PA

Dear Mr. Ahearne,

Located in Middletown, Pennsylvania, are two nonoperating nuclear units. One of these units, Three Mile Island Unit One, is a licensed reactor which is located in close proximity to its sister unit, Three Mile Island Unit Two. Unlike its sister unit, however; it is not operating due in large part to regulatory reticence.

This is an OUTRAGE!! Lessons learned from the accident at TMI 2 have resulted in modifications to nuclear units throughout the country which are in operation. TMI 1 can also make necessary modifications while operating. To force TMI 1 to remain out of service, though, appears unjustified and discriminatory. It's time to get TMI 1 back in operation, relieving the tremendous financial burden on Metropolitan Edison, its customers and its parent company - GPU.

Let's show the world that we are serious not only about the safe operation of nuclear units, but in reducing our dependence on imported oil for energy production as well.

Sincerely,

Bill S. Baylor
