AGENDA

By letter of October 20, 1980, Mr. R. Tedesco noted that significant differences existed for the bending stresses in underground piping due to differential soil settlement as calculated by ETEC and by Bechtel for Midland Plant, Units 1 & 2. The letter requested details of the stress calculations and suggested a follow-up meeting to discuss these differences. The applicant replied by letter of November 14, 1980, providing the summary calculations and confirming the need for a follow-up meeting on these differences.

The agenda will consist of a review of the two summary calculations, one by ETEC and one by Bechtel, with emphasis on differences between the two.
