Change No. 15
License No. DPR-6

Gentlemen:

By teletype message dated May 7, 1968, Consumers Power Company requested a change in Section 4.2.11(a) of the Technical Specifications of License No. DPR-6 for the Big Rock Point Nuclear Plant to permit the storage of Reload E fuel in the new fuel storage racks pending approval of its use as requested in Proposed Change No. 14 dated February 6, 1968. We have designated your request as Proposed Change No. 15.

We have reviewed Proposed Change No. 15 and the description of the Reload E fuel contained in Proposed Change No. 14. We have determined that the Reload E fuel has similar nuclear properties to the fuel now authorized for storage in the new fuel storage racks and that storage of Reload E fuel in the existing racks will not cause a criticality hazard. Consequently, we have concluded that storage of the Reload E fuel in the new fuel storage racks does not present significant hazards considerations not described or implicit in the safety analysis report, and that there is reasonable assurance that the health and safety of the public will not be endangered.

Accordingly, pursuant to Section 50.59 of 10 CFR Part 50, the Technical Specifications of Facility License No. DPR-6 are hereby changed to authorize Consumers Power Company to receive Reload E fuel, as

8104450385

POOR ORIGINAL

described in Proposed Change No. 14, at its Big Rock Point Nuclear Plant for storage in the new fuel storage racks in accordance with Section 4.2.11(a) of the Technical Specifications.

Sincerely yours,

Peter A. Morris, Director
Division of Reactor Licensing
